<b>1</b>	<b>Theoretical Basis of the Structural Modeling Method</b> . . . . .	1
1.1	Review of References . . . . .	1
1.1.1	Discrete and Continuum Models of Solids: A Brief Historical Review . . . . .	2
1.1.2	Development of Models of Microstructured Solids with Account of Particle Rotation . . . . .	5
1.1.3	Experimental Research of Dynamic Properties of Microstructured Media . . . . .	6
1.2	Methods of Description of Different Scale Levels . . . . .	8
1.3	Limits of Applicability of the Classical Mechanics Laws to Modeling of Generalized Continua . . . . .	13
1.3.1	Quantum and Classical Descriptions of Microparticles . . . . .	13
1.3.2	The Uncertainty Relation . . . . .	15
1.3.3	A Microparticle as a Localized Wave Packet . . . . .	16
1.3.4	The Conformity Principle . . . . .	18
1.4	Principles of the Structural Modeling Method . . . . .	20
1.5	Conclusions . . . . .	25
	References . . . . .	25
<b>2</b>	<b>A 2D Lattice with Dense Packing of the Particles</b> . . . . .	35
2.1	The Discrete Model for a Hexagonal Lattice Consisting of Round Particles . . . . .	35
2.2	The Continual Approximation . . . . .	39
2.3	Influence of Microstructure on Acoustic Properties of a Medium . . . . .	41
2.4	Dispersion Properties of Normal Waves . . . . .	43
2.4.1	Dispersion Properties of the Discrete Model . . . . .	43
2.4.2	Dispersion Properties of the Continual Model . . . . .	48
2.5	Conclusions . . . . .	51
	References . . . . .	52

<b>3</b>	<b>A Two-Dimensional Lattice with Non-dense Packing of Particles . . .</b>	<b>55</b>
3.1	The Discrete Model for an Anisotropic Medium Consisting of Ellipse-Shaped Particles . . . . .	55
3.2	The Continuum Approximation . . . . .	60
3.2.1	Dependence of the Anisotropy of the Medium on Its Microstructure . . . . .	61
3.2.2	A Square Lattice of Round Particles . . . . .	64
3.2.3	A Chain of Ellipse-Shaped Particles . . . . .	64
3.3	Influence of Microstructure on Acoustic Properties of the Medium . . . . .	65
3.3.1	Dependence of the Elastic and Rotational Wave Velocities on the Shape of the Particles in the 1D Lattice . . . . .	65
3.3.2	Dependence of the Acoustic Characteristics of the 2D Anisotropic Medium on the Microstructure Parameters . . .	67
3.4	Dispersion Properties of Normal Waves . . . . .	69
3.4.1	Dispersion Properties of the Discrete Model . . . . .	69
3.4.2	Dispersion Properties of the Continual Model . . . . .	75
3.5	Conclusions . . . . .	79
	References . . . . .	80
<b>4</b>	<b>Application of the 2D Models of Media with Dense and Non-dense Packing of the Particles for Solving the Parametric Identification Problems . . . . .</b>	<b>83</b>
4.1	Reduced (Gradient) Models of the Theory of Elasticity . . . . .	83
4.2	Problems of the Material Identification . . . . .	87
4.2.1	Identification of the Medium with Hexagonal Symmetry . . . . .	88
4.2.2	Identification of the Medium with Cubic Symmetry . . . . .	91
4.3	Comparison with the Cosserat Continuum Theory . . . . .	95
4.4	Influence of the Microstructure on the Poisson's Ratio of an Isotropic Medium . . . . .	97
4.5	Influence of the Microstructure on the Poisson's Ratios of the Anisotropic Medium . . . . .	101
4.6	Conclusions . . . . .	104
	References . . . . .	105
<b>5</b>	<b>Nonlinear Models of Microstructured Media . . . . .</b>	<b>109</b>
5.1	A Rectangular Lattice Consisting of Ellipse-Shaped Particles . . . . .	109
5.2	Estimation of the Nonlinearity Coefficients of the Mathematical Model of the Square Lattice of Round Particles . . . . .	115
5.3	The Square Lattice of Nanotubes . . . . .	119
5.3.1	The Discrete Model . . . . .	120
5.3.2	The Continual Approximation . . . . .	122

5.3.3	Relationships Between the Macroparameters of the Material and the Parameters of Its Inner Structure . . . . .	124
5.4	Conclusions . . . . .	126
	References . . . . .	126
<b>6</b>	<b>A Cubic Lattice of Spherical Particles . . . . .</b>	<b>129</b>
6.1	A Discrete 3D Model of a Crystalline Medium of Spherical Particles . . . . .	129
6.2	Nonlinear Model of a One-Layer Medium of Spherical Particles . . . . .	133
6.2.1	The Continuum Approximation . . . . .	133
6.2.2	Dependency of the Macroparameters of a One-Layer Medium on the Parameters of Its Microstructure . . . . .	135
6.2.3	3D Model of a Crystalline Medium of Spherical Particles . . . . .	137
6.2.4	Continuum Approximation . . . . .	137
6.2.5	Dependence of the Macroparameters of the 3D Medium on the Parameters of Its Microstructure . . . . .	138
6.2.6	Comparison of the Proposed Model with the 3D Cosserat Continuum . . . . .	140
6.3	Conclusions . . . . .	141
	References . . . . .	144
<b>7</b>	<b>Propagation and Interaction of Nonlinear Waves in Generalized Continua . . . . .</b>	<b>147</b>
7.1	Localized Strain Waves in a 2D Crystalline Medium with Non-dense Packing of the Particles . . . . .	147
7.2	A 1D Medium Consisting of Ellipse-Shaped Particles and with Internal Stresses . . . . .	152
7.2.1	Mechanical Model of a 1D Medium with Internal Stresses . . . . .	153
7.2.2	Equations of the Gradient Theory of Elasticity for a 1D Medium with Internal Stresses . . . . .	156
7.3	Self-modulation of Shear Strain Waves Propagating in a 1D Granular Medium . . . . .	158
7.3.1	The Modulation Instability Areas . . . . .	158
7.3.2	Forms of Wave Packets in the Case of the Modulation Instability . . . . .	161
7.4	Nonlinear Longitudinal Waves in a Rod Made of an Auxetic Material . . . . .	164
7.4.1	The Linear Mathematical Model. Dispersion Properties . . . . .	164
7.4.2	The Nonlinear Mathematical Model. Stationary Strain Waves . . . . .	166
7.4.3	Numerical Simulation of Soliton Interactions . . . . .	175

- 7.5 Application of an Alternative Continualization Method for Analysis of Nonlinear Localized Waves in a Gradient-Elastic Medium . . . . . 180
  - 7.5.1 One-Dimensional Model of a Nonlinear Gradient-Elastic Continuum . . . . . 181
  - 7.5.2 Nonlinear Strain Waves . . . . . 183
- 7.6 Conclusions . . . . . 187
