|                                                                                                                       |           |
|-----------------------------------------------------------------------------------------------------------------------|-----------|
| <b>FOREWORD .....</b>                                                                                                 | <b>9</b>  |
| <br><b>Chapter I</b>                                                                                                  |           |
| <b>TRENDS IN GLOBAL ENERGY DEMAND AND SUPPLY .....</b>                                                                | <b>13</b> |
| Aleksandra Gawlikowska-Fyk                                                                                            |           |
| Introduction .....                                                                                                    | 13        |
| 1. GDP and demography – increased energy demand factors .....                                                         | 14        |
| 2. Forecasting uncertainty .....                                                                                      | 14        |
| 3. Impact of the pandemic on the energy sector .....                                                                  | 16        |
| 4. Electrification .....                                                                                              | 19        |
| 5. CO <sub>2</sub> emissions .....                                                                                    | 20        |
| Conclusions .....                                                                                                     | 21        |
| References .....                                                                                                      | 22        |
| <br><b>Chapter II</b>                                                                                                 |           |
| <b>GREEN TRANSITION FINANCING MANAGEMENT .....</b>                                                                    | <b>23</b> |
| Dariusz Michalski                                                                                                     |           |
| Introduction .....                                                                                                    | 24        |
| 1. Systemic risk for financial institutions caused by climate change .....                                            | 24        |
| 2. Role of finance in the green transition .....                                                                      | 28        |
| 3. Impact of climate change risk on the performance of financial institutions .....                                   | 33        |
| 4. Selected activities of financial institutions related to climate change .....                                      | 34        |
| 5. Selected elements of green finance .....                                                                           | 41        |
| Conclusions .....                                                                                                     | 45        |
| References .....                                                                                                      | 46        |
| <br><b>Chapter III</b>                                                                                                |           |
| <b>INTERNATIONAL ENERGY MARKETS AND THE CONTINUITY OF<br/>ENERGY SUPPLY IN THE ERA OF THE COVID-19 PANDEMIC .....</b> | <b>47</b> |
| Honorata Nyga-Łukaszewska                                                                                             |           |
| Introduction .....                                                                                                    | 47        |
| 1. Energy security in the 21 <sup>st</sup> century .....                                                              | 49        |
| 2. Impact of the COVID-19 pandemic of the selected fuel markets .....                                                 | 49        |
| 3. Impact of the COVID-19 pandemic on the energy security .....                                                       | 52        |
| Conclusions .....                                                                                                     | 54        |
| References .....                                                                                                      | 55        |

## Chapter IV

### MODEL OF ENERGY TRANSITION IN THE EUROPEAN UNION ..... 57

Paweł Wróbel

|                                                                        |    |
|------------------------------------------------------------------------|----|
| Introduction .....                                                     | 57 |
| 1. Integration of the energy system .....                              | 58 |
| 2. What is the role of hydrogen technologies? .....                    | 58 |
| 3. Costs and benefits of sector integration .....                      | 59 |
| 4. "Renovation wave" – a new model of modernisation of buildings ..... | 61 |
| 5. Transition financing .....                                          | 62 |
| Conclusions .....                                                      | 63 |
| References .....                                                       | 63 |

## Chapter V

### ENERGY SECTOR TRANSITION AS A WAY TO ACCELERATE DECARBONISATION ..... 65

Ewa Mataczyńska

|                                                                                    |    |
|------------------------------------------------------------------------------------|----|
| Introduction .....                                                                 | 65 |
| 1. Background of the issue and major targets of implementation .....               | 66 |
| 2. Sector coupling as a response to changes on the energy market .....             | 67 |
| 3. Major assumptions of the energy system integration and their significance ..... | 69 |
| 4. Opportunities, challenges and barriers .....                                    | 74 |
| Conclusions .....                                                                  | 75 |
| References .....                                                                   | 76 |

## Chapter VI

### IS CARBON-NEUTRAL POLAND FEASIBLE IN THE PERSPECTIVE OF 2050? ..... 79

Katarzyna Stala-Szlugaj

|                                                        |    |
|--------------------------------------------------------|----|
| Introduction .....                                     | 79 |
| 1. Balance of coal in Poland .....                     | 81 |
| 2. Major directions of climate and energy policy ..... | 83 |
| 3. Forecast of coal consumption in Poland .....        | 85 |
| Conclusions .....                                      | 86 |
| References .....                                       | 87 |

# TABLE OF CONTENTS

## Chapter VII

### **DETERMINANTS AND BARRIERS TO THE DEVELOPMENT OF GREEN ENERGY IN POLAND ..... 89**

Dorota Niedziółka

|                                                                   |    |
|-------------------------------------------------------------------|----|
| Introduction .....                                                | 89 |
| 1. Concept of green energy .....                                  | 90 |
| 2. Determinants of green energy development .....                 | 91 |
| 3. Limitations to the development of green energy in Poland ..... | 92 |
| 4. Energy transition .....                                        | 94 |
| 5. Characteristics of the Polish electric energy market .....     | 95 |
| Conclusions .....                                                 | 97 |
| References .....                                                  | 98 |

## Chapter VIII

### **RENEWABLE AND DISTRIBUTED ENERGY SOURCES IN THE NATIONAL POWER SYSTEM. DETERMINANTS AND CHALLENGES ..... 99**

Józef Paska

|                                                                                           |     |
|-------------------------------------------------------------------------------------------|-----|
| Introduction .....                                                                        | 99  |
| 1. Definitions and classification .....                                                   | 100 |
| 2. Technologies of renewable and distributed energy sources .....                         | 101 |
| 3. Renewable and distributed energy sources and the power system .....                    | 106 |
| 4. Economic aspects of renewable and distributed energy sources in the power system ..... | 114 |
| Conclusions .....                                                                         | 117 |
| References .....                                                                          | 118 |

## Chapter IX

### **ENERGY TRANSITION AND TECHNOLOGICAL AND SOCIO-ECONOMIC PROGRESS ..... 121**

Tomasz P. Wiśniewski

|                                                                                  |     |
|----------------------------------------------------------------------------------|-----|
| Introduction .....                                                               | 122 |
| 1. Energy transitions .....                                                      | 122 |
| 2. Technological determinants of energy transitions. A historical approach ..... | 123 |
| 3. Technological determinants of the current energy transition .....             | 124 |
| Conclusions .....                                                                | 126 |
| References .....                                                                 | 127 |

# TABLE OF CONTENTS

## Chapter X

### **TECHNICAL AND REGULATORY APPROACHES TO ENHANCE THE RENEWABLE ENERGY CAPABILITIES TO TAKE PART ACTIVELY IN THE ELECTRICITY SERVICES MARKETS – DRES2MARKET ..... 129**

Hanna Bartoszewicz-Burczy, Filip Schraube

|                                                                                                                                          |     |
|------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Introduction .....                                                                                                                       | 130 |
| 1. Barriers to the development of renewable sources of energy .....                                                                      | 130 |
| 2. Company infrastructure .....                                                                                                          | 135 |
| 3. Analysis in PowerFactory (digSilent) – Test Case 1 – Analysing the impact of RES large penetration for grid congestions .....         | 141 |
| 4. Analysis in PowerFactory (digSilent) – Test Case 2 – Analysing the impact of self – consumption and storage on grid congestions ..... | 148 |
| 5. Targets of the DRES2Market project .....                                                                                              | 153 |
| Conclusions .....                                                                                                                        | 153 |
| References .....                                                                                                                         | 154 |

## Chapter XI

### **ELECTRIC VEHICLES AS MOBILE ENERGY STORAGE FACILITIES. A PROPOSAL OF NEW ENERGY SERVICES ..... 157**

Krzysztof Zagrajek

|                                                                            |     |
|----------------------------------------------------------------------------|-----|
| Introduction .....                                                         | 158 |
| 1. Legal framework to create energy services using electric vehicles ..... | 160 |
| 2. Concept of an energy service programme using electric vehicles .....    | 164 |
| Conclusions .....                                                          | 166 |
| References .....                                                           | 167 |

### **Notes on the Authors ..... 169**
