1	Introduction to Dynamic Model Reduction Techniques	1
1.1	Model Order Reduction Techniques	1
1.1.1	Physical Coordinate Reduction	2
1.1.2	Generalized Coordinate Reduction	2
1.1.3	Hybrid Reduction	3
1.2	Dynamic Condensation Technique	3
1.2.1	Guyan Condensation	3
1.2.2	Single-Mode, Multimode, and Response-Dependent Dynamic Condensation	4
1.2.3	Physical-Type, Modal-Type, and Hybrid Dynamic Condensation	6
1.2.4	Single-Step, Two-Step, and Iterative Dynamic Condensation	7
1.2.5	Undamped and Damped Dynamic Condensation	8
1.3	Organization of This Monograph	9
	References	10
2	Finite Element Modeling	13
2.1	Finite Element Method in General Form	13
2.1.1	Fundamental Definitions	13
2.1.2	Stress and Strain	15
2.1.3	Strain- and Stress-Displacement Relationships	18
2.1.4	Virtual Work Principle	18
2.1.5	Dynamic Equations of Motion	21
2.2	General Steps of Finite Element Modeling	23
2.2.1	Discretization and Selection of Element Types	23
2.2.2	Selection of Displacement Function	24
2.2.3	Determination of Relationships Between Stresses, Strains, and Nodal Displacements	24
2.2.4	Derivation of Element Matrices and Equations	24
2.2.5	Coordinate Transformation	25
2.2.6	Assemblage of Element Equations	25
2.2.7	Solution of Equations	26
2.3	Use of Symmetry	26
2.3.1	Modal Analysis	26
2.3.2	Dynamic Response Analysis	28
	References	30

3	Theory of Modal Analysis	31
3.1	Modal Theory of Undamped Systems	31
3.1.1	Undamped Free Vibration and Eigenvalue Problem	31
3.1.2	Modal Orthogonality and Normal Coordinates	32
3.1.3	Mode Superposition	34
3.2	Power Series Expansion of Dynamic Flexible Matrix	36
3.3	Modal Theory of Proportionally Damped Systems	37
3.4	Modal Theory of Nonclassically Damped Systems	38
3.4.1	Dynamic Equations of Motion in the State Space	38
3.4.2	Free Vibration and Eigenvalue Problem	40
3.4.3	Complex Mode Orthogonality	42
3.4.4	Complex Mode Superposition	45
3.5	Summary	45
	References	45
4	Static Condensation	47
4.1	Guyan Condensation for Static Problems	47
4.1.1	Definitions of Reduced Static Model	47
4.1.2	Gauss–Jordan Elimination	49
4.1.3	Numerical Demonstrations	50
4.2	Guyan Condensation for Dynamic Problems	52
4.2.1	Definitions of the Reduced Dynamic Model	52
4.2.2	Condensation of Massless Coordinates	53
4.2.3	Numerical Demonstrations	54
4.3	Guyan Condensation for Eigenproblems	56
4.3.1	Definitions of Reduced Eigenproblems	56
4.3.2	Mode Expansion	57
4.3.3	Numerical Demonstrations	58
4.4	Generalized Guyan Condensation	62
4.5	Quasistatic Condensation	64
4.6	Static Condensation Using the Flexibility Matrix	67
4.7	Summary	68
	References	69
5	Dynamic Condensation	71
5.1	Exact Condensation	71
5.1.1	Direct Back-Substitution	71
5.1.2	Coordinate Transformation	74
5.1.3	Power Series Expansion of Dynamic Flexible Matrix	75
5.1.4	State Space Method for High-Order Eigenproblem	77
5.2	Classical Dynamic Condensation	79
5.3	Further Discussions on Guyan Condensation	80
5.3.1	Valid Frequency Range of Guyan Condensation	80
5.3.2	Higher-Order Guyan Condensation	82
5.3.3	Error Analysis of Guyan Condensation	83
5.4	Dynamic Substructuring Scheme	84
5.5	Solution Schemes for Nonlinear Eigenproblems	86
5.5.1	Iterative Scheme I	87
5.5.2	Iterative Scheme II	89
5.5.3	Iterative Scheme III	90

5.5.4	Numerical Demonstrations	92
5.5.5	Some Improvements	95
5.6	Modal-Type Dynamic Condensation	96
5.6.1	Dynamic Condensation Matrix	96
5.6.2	Reduced System Matrices	100
5.6.3	Reduced Eigenvalue Problem	102
5.6.4	Hybrid-Type Condensation	103
5.7	Comparisons and Summary	104
	References	108
6	Iterative Methods for Dynamic Condensation	111
6.1	Introduction	111
6.2	Two-Step Methods	114
6.2.1	Common Inverse	114
6.2.2	Generalized Inverse	115
6.2.3	Numerical Demonstrations	117
6.3	Governing Equations of Dynamic Condensation Matrix	119
6.3.1	Single-Mode-Dependent Condensation	119
6.3.2	Multimode-Dependent Condensation	120
6.3.3	Response-Dependent Condensation	123
6.3.4	Comments on These Definitions	124
6.4	Iterative Schemes for Dynamic Condensation Matrix	125
6.4.1	Iterative Scheme I	126
6.4.2	Iterative Scheme II	127
6.4.3	Numerical Demonstrations	128
6.4.4	Further Comments	131
6.5	Generalized Iterative Method	132
6.5.1	Governing Equation of the Dynamic Condensation Matrix	132
6.5.2	Numerical Demonstrations	132
6.6	Iterative Method Using Subspace Iteration	134
6.6.1	Subspace Iteration Method	135
6.6.2	Governing Equation of Dynamic Condensation Matrix	136
6.6.3	Solution Schemes for Dynamic Condensation Matrix	137
6.6.4	Proof of Convergence	138
6.6.5	Numerical Demonstrations	140
6.7	Frequency Shift Technique	143
6.7.1	Governing Equation of Dynamic Condensation Matrix	143
6.7.2	Selection of Frequency Shift Value	144
6.7.3	Numerical Demonstrations	145
6.8	Summary	147
