

Contents

Preface xiii

Chapter 1 Introduction to Python 1

1.1 Data Types and Variables in Python 1

1.2 Sequences in Python 3

1.2.1 Lists 4

1.2.2 Range Sequences and List Comprehensions 7

1.2.3 Tuple Sequences 9

1.2.4 Functions on Sequences 9

1.3 Functions, for Loops and Conditional Statements 9

1.4 Importing Python Libraries and Packages 13

1.5 The NumPy Library 14

1.5.1 Creating NumPy Arrays 14

1.5.2 Array Functions, Attributes and Methods 16

1.5.3 Arithmetic Operations with NumPy Arrays 18

1.5.4 Indexing and Slicing of NumPy Arrays 21

1.6 The Matplotlib Module 22

1.6.1 2D Plots Using Matplotlib 23

1.6.2 3D Plots Using Matplotlib 25

1.7 Symbolic Computation with SymPy 26

1.8 The lambdify() Function in Python 28

1.9 End of Chapter Problems 29

Chapter 2 Differentiation 34

2.1 Derivatives of Single-Variable Functions 34

2.1.1 Rules for Differentiation 35

2.2 Differentiating Analytical Functions in Python 39

2.3 A Detailed Example: Derivation of Wien’s Displacement Law 47

2.4 Derivatives of Multivariable Functions 50

2.4.1 Introduction to Partial Differentiation 50

2.4.2 Total Differentials 52

2.4.3 Total Derivative of a Function - The Chain Rule
Revisited 54

2.4.4 Maximum and Minimum Problems 56

2.5 Power Series Approximations of Functions 58

2.6 Numerical Evaluation of Derivatives 63

2.7 End of Chapter Problems 66

Chapter 3 Integration 70

3.1 Integrals 70

3.2 Review of Elementary Integrals 71

3.3 Overview of Integration Methods in Python 72

3.4 Integration by Parts 73

3.5 Parametric Integration for Definite Integrals 75

3.6	Integrating Analytical Functions in Python.....	77
3.7	Fourier Series.....	80
3.8	Improper Integrals and Integrals of Special Functions.....	82
3.9	Integrating Functions Defined by NumPy Arrays.....	88
3.9.1	Simpson's Rule.....	90
3.10	End of Chapter Problems.....	91
Chapter 4	Vectors	99
4.1	Vector Basics.....	99
4.2	Scalar and Vector Fields in Python	104
4.3	Vector Multiplication	105
4.3.1	The Dot Product	105
4.3.2	The Cross Product.....	110
4.4	Triple Products	118
4.4.1	Triple Scalar Product.....	118
4.4.2	Triple Vector Product	119
4.5	Non-Cartesian Coordinates	121
4.5.1	Polar Coordinates	121
4.5.2	Cylindrical Coordinates	124
4.5.3	Spherical Coordinates	128
4.6	Differentiation of Vectors	131
4.7	Parametric Equations of Lines and Planes.....	135
4.8	End of Chapter Problems.....	143
Chapter 5	Multiple Integrals.....	147
5.1	Multiple Integrals.....	147
5.2	Evaluation of Double Integrals.....	151
5.2.1	The Evaluation of Double Integrals Over a Rectangular Domain	151
5.2.2	The Evaluation of Double Integrals Over a Non-Rectangular Domain	153
5.3	Evaluation of Triple Integrals.....	156
5.4	Change of Variables in Multiple Integrals.....	159
5.4.1	Using Polar Coordinates	159
5.4.2	Using Cylindrical Coordinates	161
5.4.3	Using Spherical Coordinates	163
5.5	Application of Multiple Integrals: Moment of Inertia Tensor	165
5.5.1	Numerical Evaluation of Multiple Integrals	168
5.6	End of Chapter Problems.....	171
Chapter 6	Complex Numbers.....	176
6.1	The Complex Plane.....	176
6.2	Trigonometric Functions and Complex Exponentials.....	179
6.3	Arithmetic with Complex Numbers	184
6.4	Application of Complex Numbers in AC Circuits.....	186
6.5	Equations with Complex Numbers.....	190
6.6	Functions of a Complex Variable	193
6.6.1	Exponentials, Powers and Roots of Complex Numbers	193
6.6.2	Hyperbolic Functions	196
6.7	Complex Vectors	197

6.8	End of Chapter Problems.....	199
Chapter 7	Matrices	203
7.1	The Structure of a Matrix.....	203
7.1.1	Defining Matrices in Python.....	204
7.1.2	Vectors as Matrices.....	205
7.2	Matrix Operations.....	205
7.2.1	Matrix Equivalence.....	205
7.2.2	Multiplication by a Scalar.....	205
7.2.3	Matrix Addition.....	206
7.2.4	Matrix Multiplication	206
7.2.5	Trace of a Matrix.....	208
7.2.6	Transpose and Hermitian Adjoint of a Matrix.....	209
7.3	The Determinant.....	211
7.3.1	Calculating Determinants	212
7.3.2	Determinants as Representations of Area and Volume	214
7.3.3	The Jacobian Determinant and Volume Transformations	216
7.4	Matrices and Systems of Linear Equations	219
7.4.1	Representing Systems of Linear Equations as a Matrix Equation	220
7.4.2	Representing Systems of Linear Equations as an Augmented Matrix.....	222
7.4.3	Homogeneous Equations	225
7.5	Matrices as Representations of Linear Operators.....	228
7.6	Eigenvalues and Eigenvectors.....	232
7.7	Diagonalization of a Matrix	236
7.8	End of Chapter Problems.....	237
Chapter 8	Vector Analysis	243
8.1	Scalar and Vector Fields	243
8.2	The Gradient of a Scalar Field.....	246
8.2.1	The Gradient in Other Coordinate Systems	252
8.3	Properties of the Gradient	255
8.4	Divergence.....	256
8.5	Curl.....	259
8.6	Second Derivatives Using ∇	264
8.7	Line Integrals	266
8.8	Conservative Fields	271
8.9	Area Integrals and Flux	273
8.10	Green's Theorem in the Plane.....	277
8.11	The Divergence Theorem	279
8.12	Stokes's Theorem	281
8.13	End of Chapter Problems.....	284
Chapter 9	Vector Spaces	288
9.1	Definition of a Vector Space.....	288
9.2	Finite Dimensional Vector Spaces	289
9.2.1	Linear Independence	289
9.2.2	Basis Vectors.....	291

9.2.3	Beyond Cartesian Coordinates.....	291
9.2.4	The Gram-Schmidt Method.....	292
9.3	Vector Spaces of Functions.....	293
9.3.1	Definition	294
9.3.2	Functions and Linear Independence.....	294
9.3.3	Inner Products and Functions.....	295
9.3.4	Basis Functions	297
9.3.5	The Gram-Schmidt Method for Functions.....	298
9.4	Infinite Dimensional Vector Spaces	300
9.4.1	Quantum Mechanics and Hilbert Space.....	300
9.5	End of Chapter Problems.....	302
Chapter 10	Ordinary Differential Equations.....	306
10.1	Definitions and Examples of Differential Equations.....	306
10.2	Separable Differential Equations	308
10.3	Symbolic Integration of Differential Equations Using SymPy.....	310
10.4	General Solution of First Order Linear ODEs: The Integrating Factor Method.....	313
10.5	ODEs for Oscillating Systems: General Considerations.....	315
10.6	The Simple Harmonic Oscillator	315
10.7	Numerical Integration of the ODE of a Simple Plane Pendulum...	318
10.8	Damped Harmonic Oscillator	321
10.8.1	Case I: Overdamped Oscillations.....	322
10.8.2	Case II: Underdamped Oscillations.....	323
10.8.3	Case III: Critically Damped Oscillations	323
10.9	Forced Harmonic Oscillator.....	326
10.10	The Principle of Linear Superposition	332
10.11	Electrical Circuits.....	335
10.12	Phase Space.....	337
10.13	Systems of Differential Equations	339
10.14	The Legendre Equation.....	345
10.14.1	Associated Legendre Functions	349
10.15	The Bessel Equation	354
10.16	End of Chapter Problems.....	361
Chapter 11	Partial Differential Equations	366
11.1	Separation of Variables	366
11.2	The Heat Equation.....	367
11.2.1	The Product Solution to the One-Dimensional Heat Equation	367
11.2.2	The Particular Solution of the Heat Equation: The Cooling Process in a Uniform Rod	370
11.3	The Laplace Equation	373
11.4	Application of the Laplace Equation in Electrostatics	376
11.5	The Wave Equation.....	379
11.6	Application of the Wave Equation for a Plucked String: Traveling Waves	381
11.7	The Laplace Equation in Cylindrical Coordinates	385
11.7.1	Application of the Laplace Equation: Electric Potential Inside a Cylinder.....	387

11.8	The Laplace Equation in Spherical Coordinates	390
11.8.1	Application of the Laplace Equation: The Electric Potential Due to a Charged Sphere	391
11.9	General Outline for Solving Linear PDEs	393
11.10	End of Chapter Problems.....	394

Chapter 12	Analysis of Nonlinear Systems	398
12.1	The Difference Between Linear and Nonlinear Systems	398
12.2	Phase Portraits.....	399
12.3	Fixed Points and Equilibria	401
12.3.1	Finding Fixed Points	402
12.3.2	The Classification of Fixed Points	403
12.4	Bifurcations of Fixed Points.....	407
12.5	The Phase Portrait, Revisited.....	410
12.6	Nonlinear Oscillations and Limit Cycles	417
12.7	Chaos	421
12.7.1	The Lorenz Equations.....	421
12.7.2	Sensitivity to Initial Conditions.....	425
12.7.3	Lyapunov Exponents and the Horizon Time	426
12.8	How to Analyze a Nonlinear System.....	427
12.9	End of Chapter Problems.....	427

Chapter 13	Analysis of Experimental Data	434
13.1	Estimating Uncertainties.....	434
13.2	Propagation of Uncertainties.....	437
13.3	Linear Regression and the Method of Least Squares	440
13.4	Data Transformations	442
13.4.1	Feature Engineering.....	442
13.4.2	Power Law Relationships and Log-Log Plots.....	445
13.4.3	Exponential Relationships and Log-Linear (Semi-Log) Plots.....	447
13.5	Multivariate Linear Regression	449
13.6	Nonlinear Regression.....	452
13.7	Fourier Transforms.....	454
13.8	Discrete Fourier transforms.....	458
13.9	Discrete and Continuous Random Variables	461
13.9.1	Discrete Random Variables.....	461
13.9.2	Continuous Random Variables.....	463
13.10	Useful Probability Functions.....	467
13.10.1	The Binomial Distribution.....	467
13.10.2	Normal Distribution.....	469
13.10.3	Poisson Distribution.....	471
13.11	End of Chapter Problems.....	473

Further Reading and Additional Resources.....	481
