

Table of contents

Preface	XIII
1 Constitutive relations for geomaterials: Formulation and verification	
A constitutive model for poroelastic damage in porous brittle materials <i>J.F. Shao, M. Bart & D. Lydzba</i>	3
Unsaturated soil modelling with special emphasis on undrained conditions <i>F. Geiser, L. Laloui & L. Vulliet</i>	9
An elastoplastic-viscoplastic model for soils <i>M. Maleki, B. Cambou, M. Farsi & Ph. Dubujet</i>	15
Modeling of anisotropic elastoplastic damage in shale rocks <i>A. S. Chiarelli, M. Sibai, J. F. Shao & N. Hoteit</i>	21
On rate-sensitive behaviour of anisotropic soils <i>S. Pietruszczak & D. F. E. Stolle</i>	27
Anisotropic hardening model for normally consolidated soft clays <i>S. J. Wheeler, A. Näättänen & M. Karstunen</i>	33
A consistent framework with embedded microstructural considerations for stress-dilatancy behaviour of sands <i>R. G. Wan & P. J. Guo</i>	41
On a simple critical state model for sand <i>W. Wu</i>	47
Hypoplastic description of the interface behaviour <i>I. Herle & K. Nübel</i>	53
Micromechanical investigation of the visco-plastic behaviour of granular materials <i>F. Calvetti</i>	59
Numerical identification of anisotropic rock parameters using uniaxial compression test <i>M. Zaki & G. Swoboda</i>	65
A generic stress surface introduced in the customised octahedral plane <i>U. Praastrup, L. B. Ibsen & P. V. Lade</i>	71

On mechanical and thermal nano-behaviour of a clay mineral <i>P.Jouanna, S.Brocas, J.Joffre & M.-A.Abellan</i>	77
 <i>2 Modelling of instabilities and strain localization in geomaterials</i>	
Plane strain instabilities in soil: Application to slopes stability <i>F.Darve & F.Laouafa</i>	85
Effects of shear banding on three-dimensional failure conditions for soils <i>P.V.Lade & Q.Wang</i>	91
Adaptive mesh modelling of localization in a cohesion-softening soil <i>M.A.Hicks & A.Abu Bakar</i>	97
Embedded discontinuity approaches for shear band analysis <i>R.de Borst</i>	103
On the necessity of stochastic material descriptions in the computational analysis of soils <i>M.A.Gutiérrez & R.de Borst</i>	109
Capturing shear band propagation caused by tunnel excavation using an anisotropic softening model for tensile and frictional failure <i>H.Walter, F.Ohmenhäuser & S.Weihe</i>	115
Effect of initial anisotropy on shear banding in granular materials <i>E.Bauer & W.Huang</i>	121
Shearing of a narrow granular layer with polar quantities <i>J.Teichman</i>	127
Numerical study of polar effects in shear zones <i>E.Bauer & W.Huang</i>	133
 <i>3 Numerical algorithms: Formulation and performance</i>	
Finite element algorithm for non-symmetric problems <i>F.Laouafa & P.Royis</i>	141
Parallel finite element analysis <i>I.M.Smith</i>	147
Numerical wave dispersion considering linear and higher order finite elements <i>J.F.Semblat & J.Brioist</i>	153
Time-integration of a viscous constitutive equation in finite element modelling by using super-stable Rosenbrock methods <i>D.Batista & P.Royis</i>	159
A new approach for inverse analysis <i>F.Darve & X.Roguez</i>	165
Taylor expansion-based integration of a thermoviscoplastic constitutive law <i>J.-F.Seignol & P.Royis</i>	171

Implicit integration scheme for CJS model <i>C.Chavant & P.Aubert</i>	177
Robust modeling of cyclic soil behaviour using a subloading model <i>O.M.Heeres & R.de Borst</i>	183
Performance of different stress-point algorithms for the integration of hypoplastic constitutive equations for geomaterials <i>C.Tamagnini, G.Viggiani & R.Chambon</i>	189
A finite element method for local second gradient model using Lagrange multipliers <i>R.Chambon, T.Matsushima & D.Caillerie</i>	195
Load stepping schemes and unbalanced force norms in geotechnical analysis <i>D.Sheng & S.W.Sloan</i>	201
Use of iterative methods for the solution of three-dimensional soil-structure interaction problems <i>H.Mroueh & I.Shahrour</i>	209
Limit analysis in geotechnics using the finite element method and mathematical programming <i>L.Santos da Silva, M.M.Farias & C.L.Sahlit</i>	215
Some remarks on application of response surface method in reliability computations <i>J.Bauer & W.Pula</i>	221
An analysis of the stress fields induced by mining with application of parallel high performance computing <i>R.Blaheta, O.Jakl, R.Kohut, A.Kolcun & J.Starý</i>	229
 <i>4 Modelling of transient/ coupled and dynamic problems</i>	
Application of a coupled thermal-hydraulic-mechanical model for unsaturated soil <i>P.J.Cleall & H.R.Thomas</i>	237
Numerical model of miscible grout propagation in deformable saturated porous media <i>F.Bouchelaghem, L.Laloui, L.Vulliet & F.Descoedres</i>	243
Transient BIE and fundamental solutions of dynamic poroelasticity <i>B.Gatmiri & M.Kamalian</i>	249
A note on modelling of coupled flow-deformation in unsaturated soils <i>D.Gallipoli, M.Karstunen & S.J.Wheeler</i>	255
Induced damage modelling of unsaturated drying deformable materials <i>A.Giraud, J.F.Shao & N.Ata</i>	263
Thermal simulation of low energy pipeline located in cold climates <i>B.B.Budkowska & I.Kreja</i>	269
BEM analysis of seismic wave amplification in Caracas <i>J.F.Semblat, A.M.Duval & P.Dangla</i>	275
Plasticity-induced coupling effects on the overall soil behaviour <i>A.Mellal</i>	281

Seismic analysis of piles and pile groups in liquefiable sand <i>W.D.L. Finn, T.Thavaraj, D.W.Wilson, R.W.Boulanger & B.L. Kutter</i>	287
Reinforced slopes subjected to seismic loads <i>R.L. Michalowski & L.You</i>	293
Critical response of a granular railway track under high train velocities <i>A.S.J. Suiker & R.de Borst</i>	297
THM and reactive transport coupling in unsaturated porous media <i>L.N.Guimarães, A.Gens, S.Olivella</i>	303
 5 Application of numerical techniques to practical problems	
5.1 Tunnels and underground structures	
Three-dimensional FE analysis to determine the settlements due to the combined excavation of a ventilation shaft and a cut-and-cover tunnel in Boston <i>B.Mattle, M.Freiseder & A.Spiegel</i>	311
Longitudinal bending moments in the tube of a bored tunnel <i>P.J.Bogaards & K.J.Bakker</i>	317
Memory-efficient 3D FE-analysis in geomechanics using a planewise model <i>A.R. Koelewijn</i>	323
Numerical modelling of tunnel installation procedures <i>C.E.Augarde, C.Wisser & H.J.Burd</i>	329
On the impact of the soil model in the numerical analysis of tunnelling <i>R.F.Stark, G.Oettl & G.Hofstetter</i>	335
Numerical modelling of tunnel excavation in soils using the Multilaminate Model <i>H.Schuller & H.F.Schweiger</i>	341
The buckling failure of tunnels induced by high horizontal stress in jointed rocks <i>Y.Hu & H.-G.Kempfert</i>	347
Visualisation of simulation results for geotechnical problems <i>G.Opriessnig & G.Beer</i>	353
Design of the Bolu Tunnels – Numerical analysis of tunnels in highly squeezing ground <i>W.Unterberger, D.Burger & G.Jedlitschka</i>	359
Strategy for dimensioning shallow NATM-tunnels <i>W.Wu & E.X.Saraiva</i>	367
Direct estimation of initial stresses of the ground around a tunnel <i>M.Hisatake</i>	373
Sensitivity study of a thermo-mechanical creep model in underground repositories <i>J.M.Panesso</i>	379
Three-dimensional modeling of the planned Wellenberg repository site in Switzerland <i>L.te Kamp, H.Konietzky & P.Blümling</i>	385

Predictions of hydro-mechanical disturbances around tunnels based on different constitutive models <i>V.Labouse</i>	391
Three-dimensional analysis of the interaction between tunneling and pile foundations <i>H.Mroueh & I.Shahrour</i>	397
Prediction of ground movements and damage to adjacent structures due to tunneling using an expert system <i>C.Y.Kim, G.J.Bae, H.S.Shin & H.K.Moon</i>	403
Micromechanical back-analysis of laboratory tests on rock <i>L.te Kamp, H.Konietzky, P.Blümling, K.Ando & J.C.Mayor</i>	411
 <i>5.2 Piles, foundations and anchors</i>	
Finite element analyses of model piles in calibration chamber <i>V.De Gennaro, R.Frank, J.Canou & G.N.Pande</i>	419
Elasto-plastic modelling of bucket foundations <i>M.F.Bransby & C.M.Martin</i>	425
Elasto-plastic liquefaction analysis of offshore foundations <i>H.A.Taiebat & J.P.Carter</i>	431
Modelling of pile foundations subjected to cyclic lateral loading <i>F.Zhang, M.Kimura & T.Nakai</i>	437
Load settlement behavior of large diameter bored piles in over-consolidated clay <i>Y.El-Mossallamy</i>	443
Numerical simulation and model tests of reinforced foundation under uplift loading <i>T.Nakai, Y.Isobe, I.Suzuta & T.Teranishi</i>	451
Identification of modulus of subgrade reaction for a pile foundation <i>B.B.Budkowska, D.Sekulovic & C.J.Branicki</i>	457
Advanced bearing capacity computation of a footing on sand using a kinematic hardening elastoplastic model <i>K.Nesnas & P.Woodward</i>	463
Numerical analysis of the influence of build-up of pore-pressure on the behaviour of micropiles subjected to lateral loading <i>N.Ata & I.Shahrour</i>	469
Numerical and experimental investigation of suction anchor design aspects <i>R.B.J.Brinkgreve, A.A.Kirstein, H.G.B.Allersma & T.Simon</i>	475
Three dimensional stability analysis of plate anchors in clay <i>R.S.Merifield, A.Lyamin, S.W.Sloan & H.S.Yu</i>	481
Drag anchor fluke-soil interaction in clays <i>M.F.Bransby & M.P.O'Neill</i>	489

Analyses and large scale testing of plate anchors <i>C.Vogt & P.A.Vermeer</i>	495
Plate-penetrometer penetration into NC soil using <i>H</i> -adaptive FE method <i>Y.Hu & M.F.Randolph</i>	501
On the bearing capacity and the serviceability of piled rafts <i>G.Maybaum, T.Vittinghoff & W.Rodatz</i>	507
 5.3 Slopes, embankments and retaining walls	
Initial stress state and numerical modelling: Application to foundations on a slope <i>B.Bornarel, B.Cambou & C.Chapeau</i>	515
Pore pressures for stability analysis of embankment on soft clay <i>D.Muir Wood</i>	521
Collapse due to static liquefaction analyzed using large deformation elasto-visco-plastic dynamics <i>F.Molenkamp</i>	527
Inverse grading in granular flows <i>M.A.Kern, L.Vulliet & W.J.Ammann</i>	535
3D FE-analysis of the stability of slope reinforced with piles <i>F.Cai & K.Ugai</i>	541
Three-dimensional finite element analysis of slope stability, geometric and parametric studies <i>A.N.Sainak</i>	547
On the use of the F.E. M. for assessing the stability of cuts and fills <i>D.J.Naylor</i>	553
In situ measurement of lateral pressure in a landslide and its use in numerical modelling <i>G.Sève, C.Russo, J.P.Magnan, P.Pouget & J.Benoît</i>	561
Modelling of consolidation in soft soils <i>J.M.Dłuzewski, P.Popielski, K.Sternik & M.Gryczmański</i>	569
Calculation of soil displacements due to retaining wall construction <i>P.Kudella & P.-M.Mayer</i>	573
Application of an anisotropic hardening model for undrained response of saturated clay <i>L.Andresen & H.P.Jostad</i>	581
 5.4 Other applications	
On rehabilitation of hydraulic structures subjected to alkali-aggregate reaction <i>V.Gocevski & S.Pietruszczak</i>	589
Ice-induced loads on hydraulic structures <i>A.P.S.Selvadurai</i>	595
Numerical modelling of the injections of cement mixes in granular soils <i>E.Nicolini & R.Nova</i>	601

Dynamic analysis of rockfall restraining structures <i>F.Nicot & B.Cambou</i>	609
Modelling biodegradation and hydraulic effects in waste refuse <i>J.R.McDougall & I.C.Pyrah</i>	615
A study on soil compaction due to agricultural traffic: Computational results and field data <i>G.Klubertanz, M.Gysi, L.Vulliet & A.Ott</i>	621
Numerical modelling of the compaction behaviour of crushed rock salt <i>U.Heemann, S.Heusermann, W.Sarfeld & B.Faust</i>	627
Modeling the stress fields in a Frustum Confining Vessel <i>G.Sedran, D.F.E.Stolle & R.G.Horvath</i>	633
Lower bound limit analysis of unreinforced masonry shear walls <i>D.J.Sutcliffe, H.S.Yu & A.W.Page</i>	639
Finite element analysis of pressuremeter tests using critical state soil models <i>M.Charles, H.S.Yu & D.Sheng</i>	645
Influence of the form of the plastic potential on the evaluation of ground subsidence <i>H.B.Poorooshab</i>	651
On the use of neuronets for simulating the stress-strain behavior of soils <i>Y.M.Najjar, I.A.Basheer & H.E.Ali</i>	657
Elasto-plastic analysis of composite material using a macro level yield function <i>J.S.Lee, I.-Y.Choi, C.-S.Bang & D.-Y.Moon</i>	663
Numerical modeling of the deformation in railway foundation – A case study <i>H.-G.Kempfert & Y.Hu</i>	669
Author index	675
