POLSKI KOMITET NORMALIZACYJNY 2024

Foreword4

Introduction5

1 Scope6

2 Normative references6

3 Terms and definitions7

4 Classification and designation8

4.1 General8

4.2 Temperature classes8

4.3 Condensate resistance classes9

4.4 Corrosion resistance classes9

4.5 Construction classes10

4.6 Location10

4.7 Designation10

5 Requirements11

5.1 General11

5.2 Characterisation11

5.3 Long-term resistance to thermal load11

5.4 Long-term resistance to condensate exposure12

5.5 Cyclic condensate resistance test12

5.6 Relaxation behaviour12

5.7 Compression set12

5.8 Tensile strength13

5.9 Elongation at break13

5.10 Joints in elastomeric seals13

5.11 Additional requirements for seals intended to be used for external installation13

6 Test methods13

6.1 General13

6.2 Characterisation13

6.3 Long-term resistance to thermal load14

6.4 Long-term resistance to condensate exposure14

6.5 Cyclic condensate resistance test15

6.6 Relaxation behaviour16

6.7 Compression set16

6.8 Tensile strength16

6.9 Elongation at break16

6.10 Strength of joints in elastomeric seals16

6.11 Additional requirements for seals intended to be used for external installation16

7 Marking and labelling17

8 Evaluation of conformity17

8.1 General17

8.2 Initial type testing17

8.3 Further type testing17

8.4 Factory production control18

Annex A (normative) Process parameters20
