Introduction xix

Chapter 1: 5G Overview 1

 A History of Mobile Communication..... 1

 Standards and Evolution of 5G..... 6

 Evolution to 5G and Overview of 5G Standalone Network 8

 Key Concepts in 5G 10

 Data Network Name 10

 Packet Data Unit Session 11

 Subscription Permanent Identifier..... 12

 5G Globally Unique Temporary Identifier 13

 QoS Model in 5G Core..... 14

 New Radio 19

 Access and Mobility Function..... 22

 Session Management Function 26

 User Plane Function..... 30

 Policy Control Function..... 32

 Charging Function 34

 Authentication Server Function 38

TABLE OF CONTENTS

Unified Data Management.....39

Unified Data Repository.....40

Network Slice Selection Function.....42

Network Repository Function.....44

Service-Based Architecture.....44

NRF: The Network Repository Function.....47

 Service Communication Proxy.....48

 Network Exposure Function.....48

 Security Edge Protection Proxy.....50

 Application Function.....52

REST and HTTP2 Methods.....53

 What is REST?.....53

 Service-Based Interface in 5GC.....58

PDU Session Establishment.....62

Chapter 2: Multi-Access Edge Computing in 5G.....69

MEC Architecture.....69

MEC Deployment.....71

Multi-Access Edge Computing in 5G.....72

 Connectivity Models for Edge Computing.....75

 Key Challenges with MEC.....76

 Solutions.....79

MEC Toolkit for 5GC.....90

 Uplink Classifier Branching Point.....91

 Mobility with ULCL.....93

 IPv6 Multi-Homing.....94

 Session and Service Continuity.....96

 Application Function Influence on Traffic Routing.....100

Chapter 3: 5G NSA Design and Deployment Strategy	103
Evolution of the Network from 4G to 5G Non-Standalone.....	105
Dual Connectivity	107
New Radio Dual Connectivity	108
Multiple Radio Access Technology Dual Connectivity	108
Architecture	109
Migration Options.....	110
Option 3/3a/3x.....	112
Option 3a	113
Option 3x	115
Option 3	117
Control and User Plane Separation	118
CUPS Architecture	121
Legacy-Based NSA and CUPS-Based NSA	125
NSA Call Flows.....	130
Deployment Considerations	136
Device Strategy and Access Point Name Planning.....	137
Gateway Node Selection.....	138
User Plane Selections.....	140
Challenge 1: No Dedicated Gateway Reserved in the Network for 5G NSA Users.....	141
Multi-Access Edge Computing Strategy for NSA.....	142
Role of Automation	143
Role of Analytics	144
Ran Access Network and Transport Implications.....	146
QoS and Charging in NSA	147
Challenge 2: Non-Adaptive IP Pool Allocation.....	150

TABLE OF CONTENTS

Challenge 3: Frequent Secondary Node Addition and Deletion Can Cause Bad Quality of Experience and Signaling Storm	157
Redundancy	163
Lawful Intercept Implications	164
Chapter 4: 5G SA Packet Core Design and Deployment Strategies	167
5G Core Network Introduction	167
Design Considerations for a 5G Core Network Deployment	171
Devices	171
5G SA Slicing Considerations	174
Node Selection	185
Interworking with 4G/5G NSA	199
Redundancy Considerations	222
Chapter 5: 5G Packet Core Testing Strategies	235
Automation Level in Testing	236
Manual Testing	236
Semi-Automated Testing or Automated Assisted Testing	237
Fully Automated Testing	237
Release Strategies for 5G SA Core Network	237
Component Type Approach	238
Release-Centric Approach	240
CI/CD Centric Approach for 5G Delivery	241
5G SA Testing Framework	246
5G SA Testing Type	247
Functional Testing	247
Non-Functional Testing	252
Security Testing	259

5G NSA Core Network Testing	262
Testing Integration Points between 5G SA.....	263
Impact Changes to be Tested in 5G	265
Redundancy Testing in 5G	266
Monitoring and Troubleshooting.....	268
Host-Level Monitoring	269
Container and Cluster Monitoring.....	270
Application/NF Monitoring.....	271
Distributed Tracing.....	274
Chapter 6: Automation in 5G	277
Network Slicing in 5G	278
Fundamental Requirements for Slicing Automation	280
Automation for a 5G Packet Core	281
Infrastructure.....	283
Deployment	284
Function.....	285
Configuration	286
5G Abstraction	286
End-to-End Slice Automation and Management	287
Communication Service.....	288
Network Slice Instance.....	288
Network Slice Subnet Instance	288
Network Slice Instance Lifecycle	289
Service Orchestration Solution	292
Service Assurance in 5G	296

TABLE OF CONTENTS

Chapter 7: Architectural Considerations by Service Providers301

Enhanced Service-Based Architecture..... 302

 NF Set and NF Service Set 302

 Indirect Communication 306

5G Policies 318

 Choosing the SM-PCF, AM-PCF, and UE-PCFs 320

 Access and Mobility-Related Policy Control 321

 UE Policy Control 328

 Session Management Policy Control 333

 QoS Negotiation..... 334

 Local Area Data Network 337

Non-Public 5G (Private Network) 338

 Deployment of Non-Public 5G Network 341

 Standalone Non-Public Network 341

 Public Network Integrated NPN 343

 Key Notes 345

Index.....347
