*Introduction* x

1 What is structural engineering? 1

2 Learn the language: a simple explanation of terms used by structural engineers 8

3 How do structures (and parts of structures) behave? 11

4 Force, mass and weight 26

5 Loading – dead or alive 32

6 Equilibrium – a balanced approach 38

7 More about forces: resultants and components 43

8 Moments 54

9 Reactions 67

10 Different types of support – and what's a pin? 73

11 A few words about stability 81

12 Introduction to the analysis of pin-jointed frames 93

13 Method of resolution at joints 98

14 Method of sections 119

15 Graphical method 127

16 Shear force and bending moments 137

17 This thing called stress 168

18 Direct (and shear) stress 173

19 Bending stress 184

**20 Combined bending and axial stress** 205

**21 Structural materials: concrete, steel, timber and masonry** 218

**22 More on materials** 229

**23 How far can I span?** 235

**24 Calculating those loads** 242

**25 An introduction to structural design** 252

**26 More on structural types and forms** 291

**27 An introduction to deflection** 310

**28 Shear stress** 324

**29 Buckling and torsion** 333

**30 Frames and three-pinned arches** 344

**31 Virtual work** 356

**32 Squares and circles of stress: An introduction to Mohr's Circle** 363

**33 Trusses (no numbers)** 380

**34 Plastic analysis** 388
