Foreword	iv
1 Scope	1
2 Normative references	2
3 Terms and definitions	3
4 Symbols and abbreviated terms	4
5 Designation system for property classes	6
6 Materials	6
7 Mechanical and physical properties.....	8
8 Applicability of test methods	12
8.1 General	12
8.2 Loadability of fasteners	12
8.3 Manufacturer's test/inspection	13
8.4 Supplier's test/inspection	13
8.5 Purchaser's test/inspection.....	13
8.6 Feasible tests for groups of fasteners and machined test pieces	14
9 Test methods	21
9.1 Tensile test under wedge loading of finished bolts and screws (excluding studs).....	21
9.2 Tensile test for finished bolts, screws and studs for determination of tensile strength, R_m	25
9.3 Tensile test for full-size bolts, screws and studs for determination of elongation after fracture, A_f , and stress at 0,0048 <i>d</i> non-proportional elongation, R_{pf}	27
9.4 Tensile test for bolts and screws with reduced loadability due to head design	31
9.5 Tensile test for fasteners with waisted shank.....	32
9.6 Proof load test for finished bolts, screws and studs.....	33
9.7 Tensile test for machined test pieces	35
9.8 Head soundness test	38
9.9 Hardness test.....	39
9.10 Decarburization test.....	41
9.11 Carburization test.....	44
9.12 Retempering test	46
9.13 Torsional test.....	46
9.14 Impact test for machined test pieces	47
9.15 Surface discontinuity inspection	48
10 Marking	48
10.1 General	48
10.2 Manufacturer's identification mark.....	49
10.3 Marking and identification of fasteners with full loadability.....	49
10.4 Marking and designation of fasteners with reduced loadability	53
10.5 Marking of packages	53
Annex A (informative) Relationship between tensile strength and elongation after fracture.....	54
Annex B (informative) Influence of elevated temperatures on mechanical properties of fasteners.....	55
Annex C (informative) Elongation after fracture for full-size fasteners, A_f	56
Bibliography.....	57
