Preface xiii

1 Fundamental Knowledge on Thermoelectric Materials 1

Jianyong Ouyang and Hanlin Cheng

1.1 Properties of Thermoelectric Materials 1

1.1.1 Thermoelectric Effect 3

1.1.2 Seebeck Effect 3

1.1.3 Peltier Effect 11

1.1.4 Thomson Effect 11

1.1.5 Electrical Conductivity 12

1.1.5.1 Charge Carrier Density 12

1.1.5.2 Charge Carrier Mobility 15

1.1.5.3 Temperature Dependence of Conductivity 17

1.1.5.4 Conductivity of Composites 20

1.1.6 Thermal Conductivity 22

1.2 Thermoelectric Generators 24

1.2.1 Dependence of Thermoelectric Efficiency on ZT 24

1.2.2 Effect of Electrical and Thermal Contact Resistances
On Thermoelectric Performance 25

1.2.3 Equation of Thermoelectric Efficiency 27

1.3 Peltier Cooling 35

1.4 Thermoelectric Sensors 37

1.5 Summary 37

Acknowledgment 38

2	Conductive Polymers for Flexible Thermoelectric Systems	41
	<i>Lin Hu, Zaifang Li, Yinhua Zhou, and Fengling Zhang</i>	
2.1	Introduction	41
2.1.1	The Discovery and Development of Conductive Polymers	42
2.1.2	Representative Structures	43
2.1.2.1	Polyacetylene (PAC)	44
2.1.2.2	Polyaniline (PAni)	44
2.1.2.3	Polypyrrole (PPy)	45
2.1.2.4	Polythiophene (PTh) and Derivatives	46
2.1.3	Conductive Mechanism	47
2.2	Chemical Design and Synthesis of Conductive Polymers	48
2.2.1	Energy Level Design of Conjugated Polymers	48
2.2.2	Tuning Molecular Conformations	51
2.2.3	Melt and Solution Processability	51
2.3	Doping of Conductive Polymers	52
2.3.1	n-Type Doping	54
2.3.2	p-Type Doping	55
2.4	The Properties of Poly(3,4-ethylenedioxythiophene)	57
2.4.1	Oxidative and in situ Polymerization of EDOT to PEDOT	57
2.4.2	Counterions for PEDOT	58
2.4.3	PEDOT:PSS	59
2.4.4	Applications in Organic Electronics	62
2.4.4.1	As an Electrode in Organic Solar Cells	62
2.4.4.2	Buffer Layer in Organic Solar Cells	64
2.4.4.3	Polymer-Based Organic Thermoelectric Generators	64
2.5	Processing Technics for Flexible Thermoelectric Generators	65
2.6	Conclusions and Perspectives	69
	Acknowledgments	69
	References	70
3	Flexible Thermoelectrics Based on Poly(3,4-Ethylenedioxythiophene)	81
	<i>Ming Hui Chua, Ady Suwardi, and Jianwei Xu</i>	
3.1	Introduction	81
3.2	TE Materials and Devices	83
3.2.1	Fundamental Principles and Theory of Thermoelectrics	83
3.2.2	PEDOT and Its Composites as TE Materials	85
3.2.3	General Configuration of TE Devices and Generators	88
3.2.4	Parameters of TE Device and Generator Performances	90
3.2.4.1	Output Voltage	90
3.2.4.2	Output Power Density	91
3.3	PEDOT-Based Flexible TE Materials	92
3.4	PEDOT:PSS-Based TEGs	99

3.5	Conclusions and Perspectives	110
	Acknowledgments	111
	Conflict of Interests	112
	References	112
4	Flexible Thermoelectric Plastic Via Electrochemistry	117
	<i>Fengxing Jiang, Peipei Liu, Baoyang Lu, Congcong Liu, and Jingkun Xu</i>	
4.1	Introduction	117
4.2	Electrochemical Deposition of CPs	118
4.3	Electronic Structure and Optical Properties	125
4.4	Electrochemical Doping and De-doping	130
4.5	Thermoelectric Performance of Flexible CP Films	133
4.5.1	Polythiophenes	133
4.5.2	Polyselenophenes	135
4.5.3	Polycarbazolyls	136
4.5.4	Copolymers	137
4.6	Control in Thermoelectric Performance by Electrochemistry	138
4.7	Conclusions	140
	Acknowledgments	142
	References	142
5	Thermoelectric Properties of Conducting Polymers with Ionic Conductors	145
	<i>Zeng Fan, Jianyong Ouyang, and Lujun Pan</i>	
5.1	Introduction	145
5.2	Mixed Ionic-Electronic Conductors	146
5.3	Ionic Conductor/Conducting Polymer Heterostructures	150
5.4	High-Performance Ion-Conducting TE Polymers	154
5.5	Applications of Electronic-Ionic Coupled TE Organics	158
5.5.1	TE Generators	158
5.5.2	Ionic TE Capacitors	159
5.5.3	Multifunctional Sensors	160
5.6	Summary	161
	Acknowledgments	161
	References	161
6	Thermoelectric Properties of Carbon Nanomaterials/Polymer Composites	163
	<i>Yue Shu, Zhenghong Xiong, Yang Liu, Yongli Zhou, Meng Li, Yujie Zheng, Shanshan Chen, and Kuan Sun</i>	
6.1	Introduction	163
6.2	Conducting Polymers	164

6.2.1	PEDOT:PSS	165
6.2.1.1	CNT/PEDOT:PSS	165
6.2.1.2	Graphene/PEDOT:PSS	171
6.2.2	Polyaniline (PANI)	173
6.2.2.1	Powder Mixing Method	174
6.2.2.2	Solution Mixing Method	178
6.2.2.3	In Situ Polymerization Method	180
6.2.2.4	Layer-by-Layer (LBL) Deposition	184
6.2.3	Polypyrrole (PPy)	184
6.2.4	Other P-Type Conducting Polymers	186
6.2.5	N-Type TE Composites	187
6.3	Non-Conducting Polymers	188
6.3.1	Wrap	190
6.3.2	Layer-by-Layer Deposition	191
6.3.3	Segregated Network	193
6.4	Ternary Thermoelectric Material	194
6.4.1	Non-conducting Polymer	194
6.4.2	Conducting Polymer	195
6.5	Summary and Outlook	198
	References	199
7	Low-dimensional Thermoelectric Materials	209
	<i>Xinyi Chen, Yuanyuan Zheng, Xue Han, Yuanyuan Jing, Minzhi Du, Chunhong Lu, and Kun Zhang</i>	
7.1	Introduction	209
7.2	Zero-Dimensional (0D) Inorganic Semiconducting Nanocrystals	209
7.2.1	Measurements	210
7.2.2	Materials and Properties	211
7.2.2.1	Fullerene	211
7.2.2.2	Graphene Quantum Dots	213
7.3	One-Dimensional (1D) Thermoelectric Materials	214
7.3.1	1D Organic Thermoelectric Materials	214
7.3.1.1	Poly(3,4-Ethylenedioxythiophene) Nanowires	214
7.3.1.2	Other Polymer Nanowires	217
7.3.2	Carbon Nanotubes	219
7.4	Two-Dimensional (2D) Thermoelectric Materials	222
7.4.1	Graphene	223
7.4.2	Black Phosphorus	226
7.4.3	Mxenes	229
