# Contents

*Foreword* ix
*Preface* xi
*Acknowledgments* xiii

**1 Introduction** 1

1.1 *Background 1*
1.2 *Challenges in relevant research areas 4*
1.3 *Significance of the book 6*
1.4 *Structure of the book 7*
References *8*

**2 State-of-the-art review on concrete structures subjected to impact loads** 13

2.1 *Introduction 13*
2.2 *Structural columns subjected to impact loads 16*
2.3 *Beams and slabs subjected to impact loads 19*
2.4 *Bridge piers subjected to impact loads 28*
2.4.1 *Bridge piers subjected to vehicle collisions 29*
2.4.2 *Bridge piers subjected to vessel collisions 37*
2.5 *Chapter review 44*
References *45*

**3 State-of-the-art review on concrete structures subjected to blast loads** 57

3.1 *Introduction 57*
3.1.1 *Theoretical background 57*
3.1.2 *Analysis of structures subjected to blast loads 59*
3.1.3 *Typical damage modes of RC structures subjected to blast loads 62*
3.1.4 *Design codes for structures against blast loads 64*
3.2 *Structural columns subjected to blast loads 66*
3.3 *Beams and slabs subjected to blast loads 76*
3.4 *Bridge piers subjected to blast loads 84*
3.5 *Chapter review 94*
References *94*

**4 Nonlinear dynamic analysis of RC columns subjected to lateral impact loads** 101

4.1 *Introduction 101*
4.2 *FE simulation of impact tests on RC columns 102*
4.3 *Drop weight impact of axially loaded RC columns 104*
4.4 *Nonlinear dynamic analysis of axially loaded columns subjected to lateral impact 105*
4.4.1 *Mid-span impact 105*
4.4.2 *Plastic hinge locations 108*
4.4.3 *Different impact locations 113*
4.4.4 *Parametric analysis 116*
4.5 *Case study 119*
4.6 *Conclusions 127*
References *127*

**5 Progressive damage assessment of bridge pier subjected to ship collision** 131

5.1 *Introduction 131*
5.2 *FE modeling and validations 133*
5.2.1 *FE model of ship 133*
5.2.2 *FE model of bridge pier 135*
5.3 *Strain rate effects of materials 137*
5.4 *Results and discussion 145*
5.4.1 *Damage progression characteristics 145*
5.4.2 *Failure modes of impacted pier 146*
5.4.3 *Damage indices 152*
5.4.3.1 *Damage index based on the pier deflection 152*
5.4.3.2 *Damage index based on the eroded internal energy 155*
5.4.3.3 *Damage index based on the axial load-carrying capacity 156*
5.5 *Conclusions 157*
References *158*

**6 Simply-supported RC beams subjected to combined impact-blast loads** 161

6.1 *Introduction 161*
6.2 *Theoretical background 163*
6.3 *FE modeling of RC beam 167*
6.3.1 *Material model 168*
6.3.2 *Strain rate effect 170*
6.3.3 *Validation of FE models under impact and blast loads 171*
6.3.4 *Applying the combined loads 174*
6.4 *Results and discussion 175*
6.4.1 *Damage index (vulnerability assessment) 175*
6.4.2 *Influence of loading sequence 176*

6.4.3 *Influence of time lag between impact and blast loads 179*
6.4.4 *Influence of beam depth 180*
6.4.5 *Influence of beam span length 184*
6.4.6 *Influence of beam longitudinal reinforcement 186*
6.4.7 *Influence of beam transverse reinforcement 188*
6.5 *Conclusions 188*
References *189*

**7 Loading rate effect on the responses of beam subjected to combined loads** 193

7.1 *Introduction 193*
7.2 *Theoretical background 195*
7.2.1 *RC beams under impact loads 195*
7.2.2 *RC beams under blast loads 196*
7.3 *FE modeling of RC beams and combined loading methodology 198*
7.4 *Results and discussion 200*
7.4.1 *RC beams under impact loads 200*
7.4.2 *RC beams under combined loads 203*
7.4.3 *Vulnerability assessment of RC beams under combined loadings 204*
7.4.3.1 *Effects of the loading sequence 205*
7.4.3.2 *Effects of the time lag 209*
7.4.3.3 *Effects of reinforcement configuration 214*
7.5 *Conclusions 215*
References *215*

**8 RC columns subjected to the combination of impact and blast loads** 219

8.1 *Introduction 219*
8.2 *Methodology of analysis 221*
8.2.1 *Damage index 222*
8.2.2 *Simplified model for calculating the length of plastic hinge 223*
8.3 *FE modeling and validation of RC columns under impact and blast loads 225*
8.4 *Results and discussion 230*
8.4.1 *Effects of loading location 231*
8.4.2 *Effects of loading sequence 235*
8.4.3 *Effects of time lag 237*
8.4.4 *Effects of axial load ratio (ALR) 243*
8.4.5 *Effects of impact velocity 245*
8.5 *Conclusions 251*
References *253*

**9 Bridge pier subjected to vessel impact combined with blast loads** 257

9.1 *Introduction 257*
9.2 *FE modeling of vessels and bridge pier 261*

9.2.1 *FE modeling of vessels 261*
9.2.2 *FE modeling of bridge 263*
9.2.3 *Validation of FE models 267*
9.3 *Methodology and limitations 276*
9.4 *Failure modes of bridge pier under combined loads 279*
9.5 *Vulnerability assessment of bridge pier under combined loads 283*
9.5.1 *Simplified FE model of the pier 284*
9.5.2 *Damage indices 285*
9.5.3 *Influence of the loading location 288*
9.5.4 *Influence of impact velocity 297*
9.5.5 *Influence of time lag 302*
9.6 *Conclusions 305*
References *306*

**10 Summary** 309

10.1 *Summary of the current work 309*
10.2 *Recommendation for future work 311*

*Appendix A* 313
*Index* 315
