*Preface*

xiii

## **I Introduction 2**

- 1.1 Introduction 2*
- 1.2 Why an earthworks book 4*
- 1.3 A short history of earthworks 8*
- 1.4 Ground models 12*
  - 1.4.1 Geological model 14*
  - 1.4.2 Geotechnical model 16*
  - 1.4.3 Earthworks model 20*
- 1.5 Earthworks cost 24*
- 1.6 The business of geotechnical engineering 26*
- 1.7 Case study – Geological model for a deep basement excavation 28*
- 1.8 Summary 30*

## **2 Site investigation 36**

- 2.1 Influence of the ground 36*
- 2.2 Planning and staging of a SI 38*
  - 2.2.1 Depth of SI 42*
  - 2.2.2 Extent of investigation 44*
  - 2.2.3 Sampling 44*
- 2.3 Field work of SI 46*
  - 2.3.1 Deep investigation 50*
  - 2.3.2 Shallow investigation and subgrade assessment 52*
- 2.4 Testing variation 54*
  - 2.4.1 Shallow foundations 54*
  - 2.4.2 Deep foundations 58*
  - 2.4.3 Counting blows 58*
  - 2.4.4 Energy transfer 62*
  - 2.4.5 N-value strength varies with geology 64*
  - 2.4.6 High and low SPT values 66*
- 2.5 Case study 1 – No geotechnical investigation 66*
- 2.6 Case study 2 – Auger and cored drilling 68*
- 2.7 Summary 70*

<b>3</b>	<b>Site safety</b>	<b>74</b>
3.1	<i>Site-safety awareness</i>	74
3.2	<i>Failure of trenches</i>	76
3.2.1	<i>Temporary supports and slopes</i>	80
3.3	<i>General safety considerations</i>	82
3.4	<i>Operating plant</i>	84
3.5	<i>Safe work method statement</i>	86
3.6	<i>Case study 1 – Sink hole failure from pile installation</i>	88
3.7	<i>Case study 2 – Incorrect as-constructed services drawings</i>	90
3.8	<i>Case study 3 – Slope failures</i>	92
3.9	<i>Summary</i>	92
<b>4</b>	<b>Phase relationships and soil classification</b>	<b>94</b>
4.1	<i>Soil elements and classification</i>	94
4.2	<i>Phase definitions</i>	96
4.3	<i>Soil types</i>	100
4.3.1	<i>Water retention</i>	100
4.4	<i>Soil classification</i>	100
4.4.1	<i>Gradings</i>	102
4.4.2	<i>Atterberg limits</i>	108
4.5	<i>Engineering use chart</i>	112
4.6	<i>Case study – Gradings pre and post compaction</i>	114
4.7	<i>Summary</i>	114
<b>5</b>	<b>Theory of compaction</b>	<b>116</b>
5.1	<i>Introduction</i>	116
5.2	<i>Mechanics of densification</i>	118
5.2.1	<i>Theory of compaction</i>	118
5.2.2	<i>Compactive effort</i>	120
5.2.3	<i>Compaction curves for different materials</i>	128
5.3	<i>Strength from compaction</i>	130
5.4	<i>Sample preparation</i>	130
5.5	<i>Field versus laboratory compaction</i>	134
5.5.1	<i>Oversize correction</i>	138
5.6	<i>CBR test</i>	140
5.7	<i>Compactor performance in the field</i>	140
5.8	<i>Case study 1 – Importance of curing times</i>	142
5.9	<i>Case study 2 – Representative sampling</i>	142
5.10	<i>Summary</i>	144
<b>6</b>	<b>Soil and rock strength</b>	<b>148</b>
6.1	<i>Introduction to soil and rock types</i>	148
6.2	<i>Rock types</i>	150
6.3	<i>Soil types</i>	150

- 6.4 *Types of soil strength* 152
  - 6.4.1 Critical strength 156
  - 6.4.2 Residual strength 156
  - 6.4.3 Compaction induced strength 156
- 6.5 *Classification of clay strength* 158
- 6.6 *Classification of strength of granular soils* 160
  - 6.6.1 Standard penetration test 164
  - 6.6.2 Dynamic cone penetration test 164
  - 6.6.3 Cone penetration test 166
- 6.7 *California bearing ratio* 168
  - 6.7.1 Interaction with underlying layer 170
  - 6.7.2 Laboratory versus field conditions 172
  - 6.7.3 CBR soaking 172
  - 6.7.4 CBR from DCP test 174
- 6.8 *Various methods of subgrade investigation* 176
  - 6.8.1 Plate load test 176
  - 6.8.2 DCP to estimate modulus 178
  - 6.8.3 LFWD to estimate modulus 180
- 6.9 *Rock properties* 182
  - 6.9.1 Rock weathering 182
  - 6.9.2 Rock strength 184
  - 6.9.3 Rock modulus 184
- 6.10 *Degradable materials* 188
- 6.11 *Case study 1 – CBR subgrade assessment* 192
- 6.12 *Case study 2 – SPT field values* 194
- 6.13 *Summary* 196

## **7 The compaction process**

198

- 7.1 *Prequel to compaction* 198
- 7.2 *Principles of compaction equipment* 200
  - 7.2.1 Number of passes and lift thickness 204
  - 7.2.2 Travel speed 208
- 7.3 *Targeted moisture content* 210
  - 7.3.1 Water required for compaction 214
- 7.4 *Productivity of compaction plant* 216
- 7.5 *Influence depth* 218
- 7.6 *Compaction equipment* 220
  - 7.6.1 Small-sized equipment 220
  - 7.6.2 Large-sized equipment 222
  - 7.6.3 Impact compaction 224
- 7.7 *Deep compaction* 228
- 7.8 *Case study 1 – Targeted field moisture ratios* 228
- 7.9 *Case study 2 – Laboratory testing variation* 230
- 7.10 *Case study 3 – Effect of roller type: dynamic force monitoring* 232
- 7.11 *Summary* 236

<b>8</b>	<b>Excavations and bulking</b>	<b>240</b>
8.1	<i>Introduction</i>	240
8.2	<i>Definition of rock in contract documents</i>	242
8.3	<i>Excavation equipment</i>	244
8.4	<i>Open excavation assessment</i>	248
8.4.1	Excavation assessment based on rock mass rating	250
8.4.2	Excavation assessment based on seismic wave velocities	250
8.4.3	Excavation assessment based on various ratings	250
8.4.4	Excavation assessment based on production rates	250
8.5	<i>Equipment balance</i>	252
8.5.1	Plant output	258
8.6	<i>Confined space excavation assessment</i>	258
8.6.1	Diggability index	258
8.6.2	Trench, shaft, and tunnel excavations in rock	262
8.7	<i>Bulking factors</i>	262
8.8	<i>Case study 1 – Unit weight of excavated material placed as fill</i>	266
8.9	<i>Case study 2 – Variation of material through a cutting</i>	268
8.10	<i>Summary</i>	270
<b>9</b>	<b>Slope stability in cuttings and embankments</b>	<b>272</b>
9.1	<i>Introduction</i>	272
9.2	<i>Causes of slope failure</i>	272
9.3	<i>Quantitative risk analysis</i>	274
9.3.1	Landslides as compared with other hazard events	276
9.3.2	The perception of risk	278
9.3.3	Case study of landslides with varying consequences	280
9.4	<i>Factors of safety</i>	284
9.4.1	Factors of safety for new slopes	284
9.4.2	Factors of safety for existing slopes	286
9.4.3	Factors of safety based on consequences class	288
9.4.4	Factors of safety for dam walls	288
9.5	<i>Typical slopes for cuttings and embankments</i>	290
9.5.1	Rock slopes	294
9.5.2	Rock cut stabilisation measures	296
9.6	<i>Soil erodibility</i>	298
9.6.1	Erodibility hierarchy	300
9.6.2	Erosion control	300
9.6.3	Benching of slopes	302
9.7	<i>Case study 1 – Mechanisms of landslide failures</i>	302
9.8	<i>Case study 2 – Riverbank failure</i>	304
9.9	<i>Case study 3 – Landslide zonation by GIS analysis</i>	304
9.10	<i>Summary</i>	308

## **10 Expansive soils 310**

- 10.1 Introduction 310*
  - 10.1.1 Pavement design and distress 312*
- 10.2 Cost of damage 316*
- 10.3 Mechanical damage from tree roots 318*
- 10.4 Volume change behaviour 320*
  - 10.4.1 Index tests 322*
  - 10.4.2 Embankments and cuttings 324*
- 10.5 Calculation of movement using the shrink – swell index 326*
- 10.6 Weighted plasticity index (WPI) for residual soils 328*
- 10.7 Soil suction and saturation 332*
- 10.8 Relationship of WPI with CBR test 338*
- 10.9 Compaction 344*
- 10.10 Design CBR 348*
- 10.11 Equilibrium moisture content compaction 350*
  - 10.11.1 Index parameters which indicate the seasonal changes 352*
- 10.12 Swell pressure tests for assessment of stable zone 354*
- 10.13 Zonal use of expansive clay 356*
- 10.14 Effect of trees on ground movement 358*
- 10.15 Case study 1 – Long-term monitoring of existing embankments 360*
  - 10.15.1 Trial embankment 362*
  - 10.15.2 Construction monitoring 364*
  - 10.15.3 Key considerations 366*
- 10.16 Case study 2 – Effect of desiccation cracks on modulus 366*
- 10.17 Summary 368*

## **11 Subgrades 370**

- 11.1 Introduction 370*
- 11.2 Sampling survey 372*
- 11.3 Subgrade considerations 374*
  - 11.3.1 Site investigation versus construction requirements 376*
- 11.4 Analytical proof of subgrade depth 378*
  - 11.4.1 Boussinesq analysis 380*
  - 11.4.2 Finite element analysis 380*
  - 11.4.3 Hertz contact mechanics 382*
- 11.5 Proof rolling for subgrade assessment 386*
  - 11.5.1 Tyred equipment for proof rolling tests 388*
  - 11.5.2 Rollers for proof rolling tests 388*
- 11.6 Rail track permissible pressure on the formation 388*
- 11.7 Case study – Subgrades for heavy loads 390*
- 11.8 Summary 392*

**12 Improved subgrades****396**

- 12.1 *Introduction* 396
- 12.2 *Remove and replace* 400
  - 12.2.1 Design basis for R&R 402
- 12.3 *In-situ stabilisation* 404
  - 12.3.1 Lime stabilisation 406
  - 12.3.2 Cement stabilisation 408
  - 12.3.3 Soil stabilisation with bitumen 410
- 12.4 *Geosynthetics* 410
  - 12.4.1 Geotextiles for separation and reinforcement 412
  - 12.4.2 Establishing geotextile strength class 414
  - 12.4.3 Geotextile strength class for horizontal and vertical placement 414
  - 12.4.4 Establishing geotextile strength class adjacent to walls and slopes 416
  - 12.4.5 Geotextile overlap 418
  - 12.4.6 Geogrids for subgrade improvement 418
  - 12.4.7 Bearing capacity factors using geotextiles 418
  - 12.4.8 Modulus improvements with geosynthetic inclusions 420
  - 12.4.9 Geotextiles as a soil filter 420
- 12.5 *Working platforms* 422
  - 12.5.1 Subgrade testing 424
  - 12.5.2 BR470 design considerations 424
  - 12.5.3 Adjacent to a slope 426
  - 12.5.4 Platform maintenance 426
  - 12.5.5 Track bearing pressure 428
  - 12.5.6 Platform material 428
  - 12.5.7 Design alternative using geotextiles 430
- 12.6 *Case study 1 – Adjacent to a creek* 430
- 12.7 *Case study 2 – Dredged sand subgrade over very soft clays* 432
  - 12.7.1 Approach 436
  - 12.7.2 Track pressure loads 438
  - 12.7.3 Geotechnical parameters 438
  - 12.7.4 Risk based analysis 440
  - 12.7.5 Acceptable displacement criterion 442
  - 12.7.6 Allowable stress criterion 442
  - 12.7.7 Analysis summary 444
  - 12.7.8 Proof rolling deflections 444
- 12.8 *Case study 3 – Lime stabilisation and a reinforced soil slope* 446
- 12.9 *Summary* 448

**13 Design considerations****450**

- 13.1 *Introduction* 450
- 13.2 *Embankment considerations* 456
- 13.3 *Factors of safety for slopes* 460
  - 13.3.1 Factors of safety for new and existing slopes 462
- 13.4 *Probability of failure* 462

13.5	<i>Stable slope batters</i>	464
13.6	<i>Embankment foundations</i>	464
13.7	<i>Foundation movements</i>	468
13.7.1	Immediate to total settlements	468
13.7.2	Free surface movements for light buildings	468
13.7.3	Free surface movements for road pavements	468
13.7.4	Tolerable deflection for proof rolling	470
13.7.5	Rail track deformations	470
13.7.6	Road surface movements on compressible soils	470
13.7.7	Differential settlement of reinforced soil structures	472
13.8	<i>Design value – risk based</i>	472
13.9	<i>Typical CBR values</i>	476
13.10	<i>Applying CBR values</i>	480
13.11	<i>Design interface with hydraulics</i>	482
13.12	<i>Case study 1 – Back-analysis of a failed slope</i>	484
13.13	<i>Case study 2 – Design detailing and analysis input</i>	490
13.14	<i>Summary</i>	494

## 14 Construction considerations

500

14.1	<i>Introduction</i>	500
14.2	<i>Quality control</i>	502
14.3	<i>Specifications</i>	504
14.3.1	Characteristic values	508
14.3.2	Frequency of testing	512
14.3.3	Specification development	512
14.3.4	Effect of climate and geology	518
14.3.5	Effect of traffic	518
14.4	<i>Blending</i>	520
14.5	<i>Rock specifications for roadway embankment fills</i>	522
14.6	<i>Rock durability</i>	526
14.7	<i>Ballast grading</i>	530
14.8	<i>Backfill for buried pipes</i>	532
14.9	<i>Observation and instrumentation</i>	534
14.10	<i>The zero air voids line</i>	538
14.11	<i>Compaction specifications</i>	540
14.12	<i>Non-density quality control</i>	546
14.13	<i>Case study 1 – Uneven rock surface</i>	548
14.14	<i>Case study 2 – Earthworks tender considerations</i>	550
14.15	<i>Case study 3 – Spatial variation and blending</i>	552
14.16	<i>Summary</i>	554
