Volume 5	
Preface	V
List of Contributors	XVII
11 Environmental Catalysis	2265
11.1 Catalysis in Environmental Protection	2265
	<i>Wilhelm Keim</i>
11.1.1 Introduction	2265
11.1.2 How Novel is Environmental Catalysis?	2266
11.1.3 Environmental Catalysis: Potential and Opportunities	2267
11.1.4 Catalysis for Environmentally Benign Products and Processes	2269
11.1.4.1 Products and Environmental Concern	2269
11.1.4.2 Processes and Environmental Compatibility	2270
11.1.5 Catalysis for Environmental Protection: Future Prospects	2271
	References 2273
11.2 Automotive Exhaust Treatment	2274
	<i>Egbert S. J. Lox</i>
11.2.1 Introduction	2274
11.2.1.1 Origin of Emissions	2274
11.2.1.2 Importance of Road Transport	2274
11.2.2 Legislation	2275
11.2.2.1 History	2275
11.2.2.2 Present and Future	2275
11.2.2.3 Measurement of Emissions	2278
11.2.2.3.1 Passenger Cars and Light Duty Vehicles	2278
11.2.2.3.2 Heavy Duty Trucks and Buses	2279
11.2.3 Technology to Meet Legislation	2280
11.2.3.1 Spark-Ignition Engines	2280
11.2.3.2 Compression-Ignition Engines	2283
11.2.4 Catalytic Systems for Gasoline-Fueled, Indirect Injection Spark-Ignition Engines	2284
11.2.4.1 Introduction	2284
11.2.4.2 Engine-Out Emissions	2284
11.2.4.3 Reactions	2285
11.2.4.4 Emission Control Concepts	2286
11.2.4.5 Aspects of Three-Way Catalyst Design	2287
11.2.4.5.1 General Aspects	2287
11.2.4.5.2 Bead Catalysts	2288
11.2.4.5.3 Ceramic Monolithic Substrates	2290
11.2.4.5.4 Metallic Monolithic Substrates	2292
11.2.4.5.5 Washcoat	2294
11.2.4.5.6 Precious Metals	2296
11.2.4.6 Aspects of Three-Way Catalyst Performance	2298
11.2.4.6.1 Introduction	2298
11.2.4.6.2 Measurement of Catalyst Performance	2298
11.2.4.6.3 Influence of Catalyst Operating Conditions	2299
11.2.4.6.4 Influence of Substrate and Converter Design	2304
11.2.4.6.5 Influence of Catalyst Formulation	2307
11.2.4.7 Deactivation of Three-Way Catalysts	2310
11.2.4.7.1 Introduction	2310
11.2.4.7.2 Assessment of Durability	2310
11.2.4.7.3 Selected Deactivation Phenomena	2312
11.2.4.8 Future Developments and Concepts	2316
11.2.5 Catalytic Systems for Gasoline-Fueled Direct Injection Spark-Ignition Engines	2318
11.2.5.1 Introduction	2318
11.2.5.2 Aspects of Operation of NO _x -Adsorber Systems	2320
11.2.5.3 Aspects of Deactivation of NO _x -Adsorber Systems	2323

11.2.6	Catalytic Systems for Diesel-Fueled Compression-Ignition Engines	2324	11.3.3.4.12	The Influence of Water	2358
11.2.6.1	Introduction	2324	11.3.3.4.13	The Influence of O ₂	2358
11.2.6.2	Diesel Oxidation Catalysts	2327	11.3.3.5	Modeling	2358
11.2.6.2.1	Aspects of Diesel Oxidation Catalyst Design	2327	11.3.3.5.1	Definition of Different Model Types	2359
11.2.6.2.2	Aspects of Deactivation	2331	11.3.3.5.2	Estimation of Interphase Mass Transfer	2359
11.2.6.2.3	Future Developments and Concepts	2334	11.3.3.5.3	Intraporous Mass Transfer	2360
11.2.6.3	Catalytic Diesel Particulate Filter Systems	2335	11.3.3.5.4	Kinetic Expressions	2360
11.2.6.3.1	Aspects of Diesel Filter System Design	2335	11.3.3.5.5	The Feasibility of Different Models	2361
11.2.6.3.2	Aspects of Filter System Operation	2336	11.3.3.6	Deactivation	2361
11.2.6.4	Diesel NO _x -Reduction Systems	2338	11.3.3.6.1	Chemical Poisoning	2362
11.2.6.4.1	Introduction	2338	11.3.3.6.2	Surface Fouling, Pore and Channel Clogging	2364
11.2.6.4.2	HC-DeNO _x -Systems	2338	11.3.3.6.3	Sintering	2366
11.2.6.4.3	Diesel NO _x -adsorber systems	2339	11.3.3.6.4	Catalyst Management and Regeneration	2366
11.2.6.4.4	SCR Systems	2340	11.3.3.7	SCR Catalyst Testing	2366
11.2.6.4.5	Future Developments and Concepts	2341	11.3.3.7.1	Laboratory- and Bench-Scale Testing	2368
11.2.7	Conclusions and Outlook	2342	11.3.3.7.2	Pilot-Scale Testing	2369
	References	2343	11.3.3.7.3	Slip-Stream Reactors	2369
11.3	Flue Gases from Stationary Sources	2345	11.3.3.7.4	Full-Scale Catalyst Testing	2369
	<i>Pär Gabrielsson and Henrik Guldberg Pedersen</i>		11.3.3.7.5	Gas Sampling and Analysis	2370
11.3.1	Emissions from Stationary Sources	2345	11.3.4	Other Emissions	2370
11.3.2	Drivers for Flue Gas Cleaning Technology	2346	11.3.4.1	Sulfur Removal	2370
11.3.2.1	The USA	2346	11.3.4.1.1	The Wet Sulfuric Acid (WSA) Process and Combined WSA and DeNO _x (SNOX)	2370
11.3.2.2	Europe	2346	11.3.4.2	Hydrogen Sulfide	2373
11.3.2.3	Asia	2348	11.3.4.3	Carbon Monoxide	2374
11.3.2.3.1	China	2348	11.3.4.4	Carbon Dioxide	2374
11.3.2.3.2	Japan	2348	11.3.4.5	Hydrocarbons	2375
11.3.3	NO _x Removal Technologies	2348	11.3.4.6	Dioxins	2376
11.3.3.1	Nitrous Oxide (N ₂ O)	2349	11.3.4.7	Hg Oxidation and Capture	2377
11.3.3.2	Selective Catalytic Reduction (SCR)	2349	11.3.4.7.1	Hg Oxidation Thermodynamics	2378
11.3.3.3	SCR Technology	2350	11.3.4.7.2	Hg Removal from Coal-Fired Power Plants	2378
11.3.3.4	SCR Catalysts	2352	11.3.4.7.3	Hg Oxidation Mechanism and Catalysis	2379
11.3.3.4.1	Different Catalyst Types	2352	11.3.4.7.4	Alternative Processes	2380
11.3.3.4.2	Choice of Carrier	2353	11.3.5	Multipollutant Processes	2380
11.3.3.4.3	Optimization of Activity	2353	11.3.5.1	The DESONOX Process	2380
11.3.3.4.4	The Effect of Increasing V ₂ O ₅ Loading	2353	11.3.5.2	Other Combined Processes	2381
11.3.3.4.5	Activation Energy as a Function of Vanadium Content	2355	11.3.5.3	Catalytic Filters	2381
11.3.3.4.6	The Effect of Co-Oxides	2356	11.3.6	New Technologies	2382
11.3.3.4.7	SCR Reaction Mechanism for Vanadium Catalysts: the Eley–Rideal Route	2356	11.3.6.1	Plasma-Assisted Processes	2382
11.3.3.4.8	Global Kinetics	2357	11.3.6.2	Photocatalytic Processes	2382
11.3.3.4.9	The Importance of Brønsted Acidity	2357		References	2382
11.3.3.4.10	The Influence of Reoxidation or NO ₂	2357	11.4	Catalytic Dehalogenation	2385
11.3.3.4.11	The Influence of Gas Composition on Reaction Rate	2358		<i>Russell Francis Howe</i>	
			11.4.1	Introduction	2385
			11.4.2	Organohalogen Compounds	2386
			11.4.3	Reaction Types	2387

11.4.3.1	Decomposition	2387	11.5.5.6	Cobalt-Based Catalysts	2405
11.4.3.2	Hydrodehalogenation	2387	11.5.5.6.1	Co-Based Catalysts: CVOC Oxidation	2406
11.4.3.3	Oxidation	2388	11.5.5.7	Nickel-Based Catalysts	2406
11.4.3.4	Hydrolysis	2389	11.5.5.8	Tungsten-Based Catalysts	2406
11.4.4	Supported Metal Catalysts	2389	11.5.5.9	Uranium-Based Catalysts	2407
11.4.5	Zeolite Catalysts	2392	11.5.5.9.1	U-Based Catalysts: CVOC Oxidation	2407
	References	2393	11.5.6	Kinetics	2407
11.5	Solid Catalysts for the Oxidation of Volatile Organic Compounds	2394	11.5.6.1	Langmuir–Hinshelwood (L–H) Models	2407
	<i>James J. Spivey</i>		11.5.6.2	Mars–van Krevelen (M–vK) Model	2408
11.5.1	Introduction	2394	11.5.7	Summary	2408
11.5.1.1	Significance of the Problem	2394		References	2408
11.5.1.2	Applications of Catalytic Oxidation for VOC Control	2394	11.6	Catalytic Combustion	2411
11.5.1.3	Catalytic Oxidation	2395		<i>Pio Forzatti, Gianpiero Groppi, and Cinzia Cristiani</i>	
11.5.1.4	Scope of this Chapter	2395	11.6.1	Introduction	2411
11.5.2	Reactors and Process Configurations for Catalytic Oxidation Systems	2395	11.6.2	Base Concepts and System Requirements	2412
11.5.2.1	Reactors	2396	11.6.3	Design Approaches	2413
11.5.2.2	Process Configurations	2396	11.6.3.1	Fully Catalytic Combustor	2413
11.5.3	General Considerations	2397	11.6.3.2	Fuel Staging	2414
11.5.3.1	Specific Problems in Chlorinated VOC (CVOC) Oxidation	2397	11.6.3.3	Partial Catalytic Hybrid Combustor	2414
11.5.3.1.1	Catalyst Deactivation in CVOC Oxidation	2397	11.6.4	Commercialization Status and Perspectives	2415
11.5.3.1.2	Byproducts	2397	11.6.5	Fuel-Rich Catalytic Combustion	2416
11.5.3.1.3	Higher Temperatures	2398	11.6.6	Catalytic Materials	2418
11.5.3.2	Mixture Effects	2398	11.6.6.1	Honeycomb Substrate	2418
11.5.3.3	Deactivation	2398	11.6.6.2	Active Catalyst Layer	2418
11.5.4	Noble Metal Catalysts	2399	11.6.6.2.1	PdO-Based Catalysts	2418
11.5.4.1	Pt catalysts	2399	11.6.6.2.2	Metal-Substituted Hexaaluminate (HA) Catalysts	2420
11.5.4.1.1	Effect of Synthesis Conditions	2399	11.6.6.2.3	Rich Combustion Catalysts	2421
11.5.4.1.2	Support Effects	2399	11.6.7	Modeling of Catalytic Combustors	2423
11.5.4.1.3	Pt-Based Catalysts: Catalyst Deactivation	2400	11.6.8	Status and Outlook	2423
11.5.4.2	Pd catalysts	2400		References	2424
11.5.4.2.1	Effect of Reduction	2400	11.7	Catalytic Routes to Hydro(chloro)fluorocarbons	2426
11.5.4.2.2	Effect of Promoters	2401		<i>Zarah Ainbinder, Leo E. Manzer, and Mario J. Nappa</i>	
11.5.4.2.3	Pd Catalysts: CVOC Oxidation	2401	11.7.1	Background	2426
11.5.5	Metal Oxide Catalysts	2402	11.7.2	Catalytic Transformations	2426
11.5.5.1	Vanadium-Based Catalysts	2402	11.7.2.1	Addition of HF	2426
11.5.5.1.1	V-Based Catalysts: CVOC Oxidation	2402	11.7.2.2	Halogen Exchange	2427
11.5.5.2	Ceria-Based Catalysts	2402	11.7.2.3	Isomerizations	2428
11.5.5.3	Manganese-Based Catalysts	2403	11.7.2.4	Disproportionations/Conproportionations	2429
11.5.5.3.1	Mn-Based Catalysts: CVOC Oxidation	2403	11.7.2.5	HX Elimination Reactions	2430
11.5.5.4	Chromia-Based Catalysts	2404	11.7.2.6	Hydrodehalogenations/Dehydrohalogenations	2430
11.5.5.4.1	Cr-Based Catalysts: CVOC Oxidation	2404			
11.5.5.5	Copper-Based Catalysts	2405			
11.5.5.5.1	Cu-Based Catalysts: CVOC Oxidation	2405			

11.7.2.7	Oxygenates as Reactive Intermediates	2431	11.9.1	Introduction	2447
11.7.2.8	Coupling	2431	11.9.2	Conversion of Biomass to Biobased Products	2447
11.7.2.9	Chlorinations/Chlorofluorinations	2431	11.9.2.1	Strategy for Biomass Conversion to Chemicals	2447
11.7.3	CFC Destruction	2432	11.9.2.2	Catalytic Conversion of Terpenes	2448
11.7.4	Purification Techniques	2432	11.9.2.3	Catalytic Conversion of Triglycerides	2449
11.7.5	Opportunities for the Future	2432	11.9.2.3.1	Catalytic Conversion of Triglycerides to Surfactants	2449
11.7.6	Conclusions	2433	11.9.2.3.2	Catalytic Conversion of Triglycerides to Lubricants	2451
	References	2433	11.9.2.3.3	Catalytic Conversion of Triglycerides to Polymers	2451
11.8	Heterogeneous Catalysis in the Troposphere	2434	11.9.2.3.4	Hydrogenation of Fatty Acids Esters	2451
	<i>Valentin M. Parmon</i>		11.9.2.4	Catalytic Conversion of Glycerol	2451
11.8.1	Introduction	2434	11.9.2.4.1	Conversion of Glycerol to Oxidized Compounds	2452
11.8.2	The Atmosphere as a Global Catalytic and Photocatalytic Reactor	2435	11.9.2.4.2	Conversion of Glycerol to Polyglycerols and Derivatives	2452
11.8.3	Thermal Heterogeneous Catalytic Processes over Ice Particles, and Liquid and Solid Aerosols	2437	11.9.2.4.3	Hydrogenolysis of Glycerol to 1,2- and 1,3-Propanediol	2453
11.8.3.1	Hydrolytic Reactions	2437	11.9.2.5	Catalytic Conversion of Carbohydrates	2453
11.8.3.2	Redox Reactions	2438	11.9.2.5.1	Hydrogenation and Hydrogenolysis of Carbohydrates	2453
11.8.3.3	Acid-Catalyzed Reactions of Organic Compounds over Aerosols	2438	11.9.2.5.2	Catalytic Oxidation of Carbohydrates	2455
11.8.4	Heterogeneous Photocatalytic Reactions in the Troposphere	2438	11.9.2.5.3	Cascade Catalysis and Multistep, One-Pot Conversion	2457
11.8.4.1	Role of Heterogeneous Photocatalytic Processes in the Global Chemistry of the Atmosphere	2440	11.9.2.6	Catalytic Conversion of Carbohydrate Derivatives	2457
11.8.4.2	Experimental Data on Photocatalytic Reactions of Atmospheric Components	2441	11.9.2.6.1	Furan Derivatives	2457
11.8.4.2.1	Photocatalytic Reactions of the Main Atmospheric Components over Semiconductor Oxides	2441	11.9.2.6.2	Conversion of Platform Molecules Produced by Fermentation	2458
11.8.4.2.2	Photocatalytic Reactions of Trace Components of the Atmosphere over Semiconductor Oxides	2442	11.9.2.7	Catalytic Conversion of Lignocellulosic Materials	2459
11.8.4.2.3	Photocatalysis over Compounds with Wide Band Gaps	2442	11.9.2.8	Concluding Remarks	2459
11.8.4.2.4	Photocatalysis by Dissolved Transition Metal Ions	2443	11.9.3	Conversion of Biomass to Heating and Transportation Fuels	2459
11.8.4.2.5	Photogenerated Catalysis	2443	11.9.3.1	Conversion of Vegetable Oils	2460
11.8.4.2.6	Destructive Photoadsorption by Alkaline Earth Oxides	2443	11.9.3.1.1	Transesterification to Biodiesel	2460
11.8.5	Role of Thermal Adsorption and Adsorption in Tropospheric Catalysis and Photocatalysis	2444	11.9.3.1.2	Cracking and Steam Reforming of Vegetable Oils	2461
11.8.6	Conclusions	2445	11.9.3.2	Biochemical/Biological Conversion of Biomass	2462
	References	2446	11.9.3.2.1	Anaerobic Digestion	2462
11.9	Conversion of Biomass on Solid Catalysts	2447	11.9.3.2.2	Fermentation and Hydrolysis	2462
	<i>Pierre Gallezot and Alain Kiennemann</i>		11.9.3.3	Catalytic Reforming of Biomass Derivatives	2462
			11.9.3.3.1	Catalytic Reforming of Methanol	2462
			11.9.3.3.2	Catalytic Steam Reforming of Ethanol	2463

11.9.3.4	Thermochemical Conversion of Biomass	2465	12.1.3.1	Di-Nitrogen	2507
11.9.3.4.1	Combustion	2465	12.1.3.2	Nitrides	2508
11.9.3.4.2	Pyrolysis	2465	12.1.3.3	Hydrogen	2510
11.9.3.4.3	Gasification	2465	12.1.3.4	The Reaction	2510
11.9.3.5	Concluding Remarks	2470	12.1.3.5	Phase Diagrams	2512
	References	2471	12.1.3.6	Ruthenium Substrates	2515
11.10	Catalysis in Water Remediation	2477	12.1.4	Generation and Structure of "Ammonia Iron"	2515
	<i>Ulf Prüße, Nadine Thielecke, and Klaus-Dieter Vorlop</i>		12.1.4.1	Reference Experiments	2515
11.10.1	Introduction	2477	12.1.4.2	Structure of the Oxide Precursor	2519
11.10.2	Oxidation Processes	2478	12.1.4.3	Activation Process	2519
11.10.2.1	Wet Air Oxidation (WAO)	2478	12.1.4.4	Activated Catalyst: Microtexture	2525
11.10.2.1.1	Conventional Wet Air Oxidation	2478	12.1.4.5	Activated Catalyst: Microstructure	2527
11.10.2.1.2	Supercritical Water Oxidation	2479	12.1.4.6	Nature of the Iron Catalyst	2536
11.10.2.1.3	Catalytic Wet Air Oxidation (CWAO)	2480	12.1.4.7	Abundance of Active Sites	2538
11.10.2.2	Fenton Processes	2482	12.1.5	Single Crystal Approach in the Iron System	2539
11.10.2.2.1	Conventional Fenton Processes	2482	12.1.5.1	Single-Crystal Structures	2539
11.10.2.2.2	Photo-Assisted Fenton Processes	2483	12.1.5.2	Energetics of Hydrogen and Nitrogen Chemisorption	2543
11.10.2.2.3	Applications of Fenton Processes	2484	12.1.5.3	Structure and Energetics of Chemisorbed Ammonia	2544
11.10.2.3	Photocatalysis	2485	12.1.5.4	Kinetics of Nitrogen Chemisorption	2545
11.10.2.4	Other Oxidation Processes	2486	12.1.5.5	Potassium Promoter Effect	2549
11.10.3	Reduction Processes	2487	12.1.6	Polycrystalline Substrates	2551
11.10.3.1	Hydrodechlorination/Hydrodehalogenation	2487	12.1.6.1	The Material Gap: Alumina as Promoter	2551
11.10.3.1.1	Hydrodechlorination by Zero-Valent Metals	2488	12.1.6.2	Nitrogen Chemisorption on Model Systems	2553
11.10.3.1.2	Hydrodechlorination with Supported Metal Catalysts	2489	12.1.6.3	Nitrogen Chemisorption on Polycrystalline Substrates	2553
11.10.3.2	Hydrodenitration	2492	12.1.7	Non-Fe Systems: Ru Catalysts	2558
11.10.4	Conclusions	2495	12.1.7.1	Nanostructured Ru	2559
	References	2495	12.1.7.2	Surface-Science Studies of the Ru System	2562
12	Inorganic Reactions	2501	12.1.8	Mechanism of Ammonia Synthesis	2564
12.1	Ammonia Synthesis	2501	12.1.8.1	Basic Kinetic Information	2564
	<i>Robert Schlögl</i>		12.1.8.2	Analytical Rate Expressions	2565
12.1.1	Introduction	2501	12.1.8.3	Microkinetic Models	2566
12.1.2	Some Basic Considerations	2502	12.1.9	Conclusions	2568
12.1.2.1	Catalyst Materials: Iron and Ruthenium	2503		References	2570
12.1.2.2	Ammonia Synthesis as the Reference Reaction	2504	12.2	Ammonia Oxidation	2575
12.1.2.3	Choice of Catalyst: Historic Development	2505		<i>Stephan T. Hartscher, Thomas Fetzner, Eckhart Wagner, and Heinz-Josef Kneuper</i>	
12.1.2.4	Choice of Catalyst: Theory-Based Approach	2506	12.2.1	Introduction	2575
12.1.2.5	Reaction Efficiency and Research Needs	2507	12.2.2	History	2575
12.1.3	Thermodynamic Aspects	2507	12.2.3	Thermochemistry	2576
			12.2.4	Reaction Mechanism	2576
			12.2.5	Mass Transfer and Kinetics	2577
			12.2.6	Catalysts	2577
			12.2.6.1	Nature and Performance of the Pt–Rh catalyst	2577

12.2.6.1.1	Form and Arrangement	2577	12.3.4	Mechanism and Kinetics of HCN formation in the BMA and Andrussov Processes	2601
12.2.6.1.2	Operating Life	2578	12.3.4.1	Kinetics and Mechanism of the BMA Process	2602
12.2.6.1.3	Ignition and Activation	2578	12.3.4.1.1	Thermodynamic Context	2602
12.2.6.1.4	Catalyst Poisons and Platinum Damage	2578	12.3.4.1.2	HCN and N ₂ Formation	2602
12.2.6.2	Catalyst Composition	2579	12.3.4.1.3	Coke Formation	2603
12.2.6.2.1	Effect of Rhodium in the Pt–Rh Catalyst	2579	12.3.4.1.4	On the Role of Gas-Phase Reactions	2603
12.2.6.2.2	Behavior of Other Metals	2580	12.3.4.1.5	Catalytically Active Centers	2604
12.2.6.2.3	Oxide Catalysts	2580	12.3.4.2	Kinetics and Mechanism of the Andrussov Process	2604
12.2.6.2.4	Processes Occurring at the Catalyst Surface	2580	12.3.4.2.1	Thermodynamic Relationships	2604
12.2.6.3	Recent Developments	2581	12.3.4.2.2	HCN Formation	2604
12.2.6.3.1	Catalyst Research	2581	12.3.4.2.3	HCN Hydrolysis	2607
12.2.6.3.2	Knitted Gauzes	2581	12.3.4.2.4	Catalytically Active Centers	2607
12.2.7	Reaction Engineering	2582	12.3.5	Final Remarks	2607
