	Volume 7	
	Preface V	
	List of Contributors XXI	
14	Organic Reactions 3123	
14.1	Aromatization of Light Alkanes 3123 <i>Cyril T. O'Connor</i>	
14.1.1	Introduction 3123	
14.1.2	Thermodynamics of Alkane Aromatization 3123	
14.1.3	Catalysts 3124	
14.1.3.1	Ga/HZSM-5 3124	
14.1.3.2	Pt/KL 3127	
14.1.3.3	Other Catalysts for Alkane Aromatization 3128	
14.1.4	Aromatization of Alkanes in the Range C ₃ –C ₈ 3128	
14.1.4.1	Aromatization of Propane 3129	
14.1.4.2	Aromatization of Ethane 3129	
14.1.4.3	Aromatization of Butane 3129	
14.1.4.4	Aromatization of Hexane 3130	
14.1.4.5	Aromatization of Pentanes, Heptanes and Octanes 3130	
14.1.5	Commercial Applications of Aromatization of Light Alkanes 3131	
14.1.6	Conclusion 3132 References 3132	
14.2	Ring Opening of Aromatics 3133 <i>Jens Weitkamp</i>	
14.2.1	Introduction 3133	
14.2.2	Fundamentals of Hydrodecyclization of Cycloalkanes 3134	
14.2.2.1	Hydrogenolysis on Metals 3135	
14.2.2.2	Hydrocracking on Bifunctional Catalysts 3135	
14.2.2.3	Cracking and Activation of Hydrogen on Monofunctional Acidic Catalysts 3138	
14.2.3	Ring Opening of Aromatics in Diesel and Jet Fuels 3140	
14.2.3.1	Bifunctional Catalysts 3141	
14.2.3.2	Metal Catalysts 3143	
14.2.3.3	Acid Catalysts 3146	
14.2.4	Ring Opening of Aromatics in Gasoline Without Degradation of the Carbon Number 3146	
14.2.5	Ring Opening of Aromatics in Pyrolysis Gasoline Followed by Hydrocracking into a Synthetic Steam-Cracker Feed 3146	
14.2.5.1	Hydrodecyclization and Hydrocracking of Cycloalkanes on Acid Zeolites 3147	
14.2.5.2	Direct Ring Opening of Aromatics on Bifunctional Zeolites 3149	
14.2.6	Conclusions 3150 References 3151	
14.3	Alkylation of Aromatics 3153 <i>Michael C. Clark, C. Morris Smith, David L. Stern, and Jeffrey S. Beck</i>	
14.3.1	Introduction 3153	
14.3.2	Alkylation of Benzenes, Phenols and Anilines 3154	
14.3.2.1	Acid-Catalyzed Synthesis of Alkylbenzenes 3154	
14.3.2.1.1	General Aspects 3154	
14.3.2.1.2	Commercial Processes 3156	
14.3.2.2	Base-Catalyzed Synthesis of Alkylbenzenes 3161	
14.3.2.2.1	General Aspects 3161	
14.3.2.2.2	Synthesis of Styrene from Toluene with Methanol 3162	
14.3.2.2.3	Isobutylbenzene 3162	
14.3.2.2.4	<i>tert</i> -Amylbenzene 3162	
14.3.2.2.5	Butenylation of Alkylaromatics 3162	
14.3.2.3	Alkylphenols 3163	
14.3.2.3.1	Methylphenols 3163	

14.3.2.3.2	Higher Alkylphenols	3163	14.4.6.3	Ethylbenzene and Cumene Transalkylation Processes	3183
14.3.2.4	Alkylanilines	3163	14.4.7	<i>p</i> -Diethylbenzene	3184
14.3.3	Alkylation of Binuclear Aromatics	3164	14.4.8	Diisopropylbenzene	3184
14.3.3.1	Alkylation of Naphthalene	3164	14.4.9	Mechanisms of Aromatic Transformations	3184
14.3.3.2	Alkylation of Biphenyl	3165	14.4.9.1	Relative Reactivity of Alkylaromatics	3184
14.3.4	Conclusions	3166	14.4.9.2	Initiation of Alkylaromatic Conversion Chemistry	3185
	References	3166	14.4.9.3	Unimolecular Aromatic Conversion Chemistry	3185
14.4	Isomerization and Transalkylation of Alkylaromatics	3168	14.4.9.4	Bimolecular Aromatic Conversion Chemistry	3186
	<i>David L. Stern, Stephen H. Brown, and Jeffrey S. Beck</i>		14.4.10	Process Implications of Alkylaromatic Transformation Mechanisms	3187
14.4.1	Introduction	3168	14.4.10.1	Xylene Isomerization	3187
14.4.2	Catalysts	3169	14.4.10.2	Conversion of Ethylbenzene to Xylenes	3188
14.4.2.1	Catalyst Acid Strength	3169	14.4.10.3	Methylaromatic Transalkylation	3188
14.4.2.2	Catalyst Structure	3170	14.4.10.4	Ethylbenzene Disproportionation to Diethylbenzene	3188
14.4.2.3	Shape Selectivity and Diffusional Restriction	3171	14.4.10.5	Methylnaphthalene and Dimethylnaphthalene Isomerization and Transalkylation	3189
14.4.3	Xylenes	3172	14.4.11	Olefin Reactivity and Coking in Transformations of Alkylaromatics	3189
14.4.3.1	Aromatic Feedstocks and Reformate Separations	3172	14.4.11.1	Light and Heavy Product Distributions in Selective Toluene Disproportionation (STDP)	3190
14.4.3.2	Xylene Separations	3173	14.4.11.2	Byproduct Formation in Ethylbenzene and Cumene Transalkylation	3191
14.4.3.3	Toluene Conversion to Benzene	3174	14.4.11.3	Catalyst Coking	3191
14.4.4	Xylene Isomerization	3174	14.4.12	Conclusions	3192
14.4.4.1	Fundamentals of Xylene Isomerization	3174		References	3192
14.4.4.2	Ethylbenzene Conversion in Xylene Isomerization Processes	3175	14.5	Non-Oxidative Activation of Alkanes	3194
14.4.4.3	Ethylbenzene Hydrocracking Processes in Xylene Isomerization	3175		<i>Yvonne Traa</i>	
14.4.4.4	Ethylbenzene Hydroisomerization Processes in Xylene Isomerization	3177	14.5.1	Introduction	3194
14.4.4.5	Ethylbenzene Disproportionation Processes in Xylene Isomerization	3177	14.5.2	Thermodynamic Aspects	3196
14.4.5	Methylaromatics Transalkylation	3177	14.5.3	Activation of Methane	3196
14.4.5.1	Fundamental Aspects of Methylaromatics Transalkylation	3177	14.5.3.1	Catalytic Decomposition of Methane to Hydrogen and Carbon	3198
14.4.5.2	Methylaromatics Transalkylation Catalysts and Process Chemistry	3178	14.5.3.2	Conversion of Methane to Ethane and other Aliphatics	3198
14.4.5.3	Methylaromatics Transalkylation Processes	3178	14.5.3.3	Aromatization of Methane	3200
14.4.5.4	Selective Toluene Disproportionation (STDP)	3179	14.5.3.3.1	The Catalyst	3200
14.4.5.4.1	Shape Selectivity in STDP	3179	14.5.3.3.2	The Carbonaceous Deposits and Mechanistic Considerations	3200
14.4.5.4.2	Selective Toluene Disproportionation Processes	3181	14.5.3.3.3	Influence of Co-Reactants	3201
14.4.6	Ethylbenzene and Cumene Transalkylation	3182	14.5.3.4	Co-Conversion of Methane with Alkenes	3201
14.4.6.1	Catalysts for Ethylbenzene and Cumene Transalkylation	3182			
14.4.6.2	Feeds and Products of Ethylbenzene and Cumene Transalkylation	3183			

14.5.4	Alkylation of Aromatics with Alkanes	3202	14.6.5.1.2	Carrying Out the Reaction in a Heated Reactor	3219
14.5.4.1	Propane as Alkylating Agent	3203	14.6.5.1.3	Preheating the Catalyst and Carrying Out the Reaction in an Adiabatic Reactor	3219
14.5.4.2	Ethane as Alkylating Agent	3204	14.6.5.2	Regeneration	3219
14.5.4.3	Methane as Alkylating Agent?	3204	14.6.5.2.1	Continuous Systems	3220
14.5.5	Other Reactions of Light Alkanes	3204	14.6.5.2.2	Discontinuous Systems	3220
14.5.6	Conclusions	3205	14.6.6	Commercial Processes	3221
	References	3205	14.6.6.1	UOP Oleflex Process	3221
14.6	Dehydrogenation of Alkanes	3206	14.6.6.2	Uhde STAR Process	3221
	<i>Karl Josef Caspary, Helmut Gehrke, Max Heinritz-Adrian, and Meinhard Schwefer</i>		14.6.6.3	ABB Lummus CATOFIN Process	3223
14.6.1	Introduction	3206	14.6.6.4	Linde PDH Process	3224
14.6.1.1	Importance of Light Alkenes	3206	14.6.6.5	Snamprogetti-Yarsintez FBD Process	3224
14.6.1.2	Historical Developments	3207	14.6.7	Dehydrogenation of Other Alkanes	3225
14.6.2	Conceptual Approach	3207	14.6.7.1	Dehydrogenation of Heavy <i>n</i> -Alkanes	3225
14.6.2.1	Influence of Temperature on the Equilibrium	3207	14.6.7.2	Dehydrogenation of Cyclohexane	3225
14.6.2.2	Influence of Partial Pressure on the Equilibrium	3208	14.6.8	Future Developments	3226
14.6.2.3	Energy of Alkane Dehydrogenation	3209	14.6.8.1	Membrane Technology	3226
14.6.2.4	Formation of By-Products	3209	14.6.8.2	CO ₂ as a Diluent	3226
14.6.2.5	Removal of Hydrogen to Shift the Equilibrium	3210	14.6.9	Conclusions and Future Prospects	3226
14.6.2.5.1	Spatial Separation of Dehydrogenation and Hydrogen Combustion	3210		References	3227
14.6.2.5.2	Dehydrogenation and Hydrogen Combustion in a Catalyst Bed	3210	14.7	Dehydrogenation of Ethylbenzene	3229
14.6.2.5.3	Oxidative Dehydrogenation (ODH)	3210		<i>Karl Kochloefl and Martin Muhler</i>	
14.6.3	Catalytic Systems	3211	14.7.1	Introduction	3229
14.6.3.1	Supported Chromia Catalysts	3211	14.7.2	Thermodynamics	3229
14.6.3.1.1	Chromia on Al ₂ O ₃ Supports	3211	14.7.3	By-Products	3229
14.6.3.1.2	Chromia on SiO ₂ /ZrO ₂ Supports	3212	14.7.4	Effects of Diluents, Especially Steam	3230
14.6.3.2	Supported Platinum/Tin Catalysts	3213	14.7.5	Catalysts	3230
14.6.3.2.1	Platinum as Active Component	3213	14.7.5.1	Development of EDBH Catalysts	3230
14.6.3.2.2	Tin as Modifier	3213	14.7.5.2	Role of Potassium	3231
14.6.3.2.3	State and Mode of Operation of Platinum and Tin	3213	14.7.5.3	Dehydrogenation of Ethylbenzene on Well-Defined Iron Oxide Model Catalysts	3233
14.6.3.2.4	Role of the Support	3214	14.7.5.4	Deactivation of K–Fe Catalysts	3234
14.6.3.2.5	Regeneration of Supported Platinum/Tin Catalysts	3215	14.7.5.5	Promoters of K–Fe Catalysts	3234
14.6.4	Kinetics and Mechanism	3216	14.7.6	Kinetics	3235
14.6.4.1	Kinetics of Dehydrogenation	3216	14.7.7	Application of Membrane Reactors	3236
14.6.4.1.1	Chromia/Alumina Catalysts	3216	14.7.8	Dehydrogenation of Ethylbenzene-Related Hydrocarbons	3237
14.6.4.1.2	Platinum and Platinum/Tin Catalysts	3217	14.7.9	Alternative Routes for the Production of Styrene	3237
14.6.4.2	Kinetics of Deactivation	3217	14.7.10	Industrial Processes and Commercial Catalysts	3238
14.6.5	Reactor Concepts	3218	14.7.10.1	Adiabatic EBDH	3238
14.6.5.1	Endothermic Character	3218	14.7.10.2	Isothermal EBDH	3238
14.6.5.1.1	Preheating the Feed and Carrying out the Reaction in an Adiabatic Reaction System	3218	14.7.10.3	SMART EBDH Process	3238
