|-------------------------------------------------------------------------------------------------------------------|-----|
| 1. General and theoretical aspects of the diazonium and diazo groups<br>J. B. Moffat                              | 1   |
| 2. Diazonium-diazo equilibrium<br>V. Štěrbá                                                                       | 71  |
| 3. Structural chemistry<br>S. Sorriso                                                                             | 95  |
| 4. Thermochemistry of diazo compounds and organic azides<br>R. Shaw                                               | 137 |
| 5. Detection and determination of diazo and diazonium groups<br>D. A. Ben-Efraim                                  | 149 |
| 6. Basicity, acidity and hydrogen bonding<br>J. F. McGarrity                                                      | 179 |
| 7. Complex formation<br>H. M. Niemeyer                                                                            | 231 |
| 8. Synthetic applications of diazonium ions<br>D. S. Wulfman                                                      | 247 |
| 9. Photochemistry of the diazonium and diazo groups<br>W. Ando                                                    | 341 |
| 10. The electrochemistry of the diazo and diazonium groups<br>A. J. Fry                                           | 489 |
| 11. The influence of the diazo and diazonium groups<br>E. S. Lewis                                                | 499 |
| 12. Kinetics and mechanisms of reactions involving diazonium and diazo groups<br>A. F. Hegarty                    | 511 |
| 13. Rearrangements involving the diazo and diazonium groups<br>B. Whittaker                                       | 593 |
| 14. Preparation of diazonium groups<br>K. Schank                                                                  | 645 |
| 15. Synthesis of diazoalkanes<br>M. Regitz                                                                        | 659 |
| 16. Preparation and uses of isotopically labelled diazonium and diazo compounds<br>P. J. Smith and K. C. Westaway | 709 |

|                                                                                                                                                      |      |
|------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 17. Carbonyl, phosphoryl and sulphonyl diazo compounds<br>M. Regitz                                                                                  | 751  |
| 18. Synthetic application of diazoalkanes, diazocyclopentadienes and<br>diazooazacyclopentadienes<br>D. S. Wulfman, G. Linstrumelle and C. F. Cooper | 821  |
| Author Index                                                                                                                                         | 977  |
| Subject Index                                                                                                                                        | 1045 |
