

Contents

1.	<i>One-Determinantal Theory of Chemical Reactivity</i>	1
1.1	General Principles and Computational Schemes	1
1.2	Qualitative One-Determinantal Models of Chemical Reactivity	6
1.3	The Static One Electron Molecular Orbital Model	7
1.4	Orbital Energies. The Donor-Acceptor Classification of Molecules and the Concept of Reaction Polarity	11
1.5	One Electron Interaction Matrix Elements and Overlap Integrals	12
1.6	The Woodward-Hoffmann Molecular Orbital Correlation Diagram	15
2.	<i>Configuration Interaction Overview of Chemical Reactivity</i> . .	18
2.1	General Principles	18
2.2	Qualitative Configuration Interaction Models of Chemical Reactivity	19
2.3	The Static Linear Combination of Fragment Configurations Method	20
2.4	The Static Delocalized Configuration Interaction Method . .	26
2.5	The Dynamic Delocalized Configuration Interaction Method .	28
3.	<i>The Dynamic Linear Combination of Fragment Configurations Method</i>	31
3.1	Definitions	31
3.2	General Theoretical Considerations	35
3.3	The Interaction of Diabatic Surfaces	37
3.4	Polarity Control of Barrier Heights and Decay Efficiencies .	43
3.5	The Effect of Excitation Energy on Photochemical Barrier Height	44
3.6	Diabatic Surface Interrelationships. A Classification of Chemical Reactions	45
4.	<i>Even-Even Intermolecular Multicentric Reactions</i>	51
4.1	Potential Energy Surfaces for $2\pi + 2\pi$ Cycloadditions	51
4.2	The Effect of Polarity. Potential Energy Surfaces for Nonionic and Ionic $2\pi + 2\pi$ Cycloadditions	64

4.3	Pericyclic, Effectively Pericyclic and Quasipericyclic Reactions	71
4.4	The Effect of Unsymmetrical Substitution and the Effect of Conjugative Substitution	73
4.5	The Regiochemistry of $2\pi + 2\pi$ Cycloadditions	74
4.6	Isomeric Reactions and the Topochemistry of $2\pi + 2\pi$ Cycloreversions	80
4.7	The Topochemistry of Intramolecular Cycloadditions	82
4.8	The Selectivity-Polarity Relationship	83
4.9	Reaction Intermediates and Types of Organic Mechanisms	85
4.10	$2\pi + 2\pi$ Nonionic Photocycloadditions Involving $n\pi^*$ Excitation	88
4.11	The Effect of Low Lying Diexcited Diabatic Surfaces in Photoreactions	92
4.12	The Problem of Energy Wastage. The Concept of Dual Channel Photoreactions	95
4.13	Generalizations	99
5.	<i>The Problem of Correlation Imposed Barriers</i>	101
6.	<i>Reactivity Trends of Thermal Cycloadditions</i>	104
6.1	Introduction	104
6.2	Mechanisms of Stereochemical Nonretention in Cycloadditions	104
6.3	Reactivity Trends of Thermal Nonionic $2\pi + 2\pi$ Cycloadditions	106
6.4	Reactivity Trends of Thermal Ionic $2\pi + 2\pi$ Cycloadditions	114
6.5	The $2\pi + 2\pi$ Ionic Cycloaddition Problem	119
6.6	Reactivity Trends of Thermal Nonionic $4\pi + 2\pi$ Cycloadditions	123
6.7	Reactivity Trends of Thermal Ionic $4\pi + 2\pi$ Cycloadditions	124
7.	<i>Reactivity Trends of Singlet Photochemical Cycloadditions</i>	126
7.1	Introduction	126
7.2	The Photochemistry of Singlet $2\pi + 2\pi$ Photocycloadditions	126
7.3	"Unusual" Head to Head vs. Head to Tail Regioselectivity of Photocycloadditions	140
7.4	$n\pi^*$ State Dual Channel Mechanisms of Polar Nonionic Carbonyl Photocycloadditions	141
7.5	$\pi\pi^*$ State Dual Channel Mechanisms of Polar Nonionic Photocycloadditions	141
8.	<i>Miscellaneous Intermolecular Multicentric Reactions</i>	147
8.1	Cycloadditions of Cumulene Systems	147
8.2	The Ene Reaction	150
8.3	1,3 Dipolar Cycloadditions	152
9.	<i>$\pi + \sigma$ Addition Reactions</i>	154
9.1	Introduction	154
9.2	Potential Energy Surfaces for $2\pi + 2\sigma$ Additions	155
9.3	Reactivity Trends of $2\pi + 2\sigma$ Additions	157

10.	<i>Even-Odd Multicentric Intermolecular Reactions</i>	160
10.1	Potential Energy Surfaces for $2\pi + 1\pi$ Cycloadditions	160
10.2	Reactivity Trends of Cationic Even-Odd Retro-Cycloadditions and Eliminations	165
11.	<i>Potential Energy Surfaces for Odd-Odd Multicentric Intermolecular Reactions</i>	167
12.	<i>Even-Even Intermolecular Bicentric Reactions</i>	171
12.1	Potential Energy Surfaces for Electrophilic and Nucleophilic Additions	171
12.2	Reactivity Trends of Electrophilic and Nucleophilic Substitutions.	174
13.	<i>Even-Odd Intermolecular Bicentric Reactions</i>	186
13.1	Potential Energy Surfaces for Radical Additions	186
13.2	Reactivity Trends of Radical Substitution Reactions	188
14.	<i>Odd-Odd Intermolecular Bicentric Reactions. Potential Energy Surfaces for Geometric Isomerization and Radical Combination</i>	192
15.	<i>Odd-Odd Intramolecular Multicentric Reactions</i>	198
15.1	Potential Energy Surfaces for Sigmatropic Shifts	198
15.2	Reactivity Trends of Sigmatropic Shifts	205
16.	<i>Even-Even Intramolecular Multicentric Reactions</i>	215
16.1	Potential Energy Surfaces for Ionic Rearrangements	215
16.2	Reactivity Trends of Ionic Rearrangements	219
17.	<i>Mechanisms of Electrocyclic Reactions</i>	221
17.1	Introduction	221
17.2	Reactivity Trends of Electrocyclic Reactions	222
18.	<i>Triplet Reactivity</i>	226
18.1	Introduction	226
18.2	Excited State Spin Multiplicity and Photochemical Barrier Heights	226
18.3	The Mechanism of Spin Inversion in Triplet Nonionic Photoaromatic Reactions	228
18.4	The Mechanism of Spin Inversion in Triplet Nonionic Photoantiaromatic Reactions	238
18.5	Spin-Orbit Coupling Borrowing	242
18.6	Mechanisms of Triplet Photoreactions	243
18.7	A Model of Triplet Reactivity	246

Contents

18.8	Spin-Orbit Coupling and the Chorochemistry of Triplet Photocycloadditions	248
18.9	Spin-Orbit Coupling and the Regiochemistry of Triplet Photoaromatic Substitutions	248
19.	<i>Photophysical Processes</i>	250
20.	<i>The Importance of Low Lying Nonvalence Orbitals</i>	255
21.	<i>Divertissements</i>	257
21.1	Thermal Antiaromatic Pericyclic Reactions	257
21.2	Induced Thermal Pericyclic Reactions	258
21.3	Half-Aromatic Reaction Paths	258
21.4	Ambident Reactivity	259
21.5	The Stereoselectivity of Photocycloadditions: In Search of Antiaromatic Intermediates	260
22.	<i>A Contrast of "Accepted" Concepts of Organic Reactivity and the Present Work</i>	262
	<i>Epilogue</i>	271
	<i>Appendix</i>	274
