

Table of Contents

1.	Generation of Free Radicals	1
1.1.	Free Radicals, Biradicals, and Radical Ions	1
1.2.	Basic Properties of Free Radicals	1
1.3.	Free Radical Reactions	2
1.4.	Interaction of Electromagnetic Radiation with Matter	2
1.4.1.	Interaction of Low Energy Photons with Matter	3
1.4.2.	Interaction of High Energy Photons with Matter	5
1.5.	Interaction of Charged Particles with Matter	5
1.6.	Physical Sources of Free Radicals	7
1.6.1.	Ionizing Radiation	7
1.6.1.1.	Charged Particle Accelerators	7
1.6.1.2.	Radioisotope Sources	7
1.6.1.3.	Nuclear Reactors	10
1.6.2.	Light Irradiation	10
1.6.3.	Other Physical Sources for the Production of Free Radicals	10
1.7.	Chemical Sources for the Production of Free Radicals	10
2.	Principles of ESR Spectroscopy	11
2.1.	Introduction	11
2.2.	Interaction Between the Electron Spin and Internal Magnetic Field	11
2.3.	Spin Relaxation	14
2.4.	The Shape of ESR Resonance Lines	16
2.4.1.	Line Shape	16
2.4.2.	Line Width	18
2.4.3.	Intensity	20
2.5.	g-Value	20
2.6.	Interaction Between the Electron and the Nuclear Spins	22
2.6.1.	Hyperfine Structure Spectrum due to a Single Proton	23
2.6.2.	Spectra with Hyperfine Structure due to Equivalent Protons	27
2.6.3.	Hyperfine Structure Spectra due to Nonequivalent Protons	38
2.6.4.	Second Order Splittings of Lines	38
3.	Experimental Instrumentation of Electron Spin Resonance	39
3.1.	ESR Spectrometers	39
3.2.	Field Sweep Calibration	41
3.3.	Measurements of Spin Concentration	41
3.4.	Measurements of ESR Spectra at Different Temperatures	43
3.5.	Computer Application into ESR Spectroscopy	45
3.6.	Preparation of Samples for ESR Experiments	45

Table of Contents

3.6.1.	Gases	45
3.6.2.	Liquids	46
3.6.3.	Solids	50
3.6.4.	Stabilization of Free Radicals	50
3.6.5.	Apparatus for High Pressure Annealing of Samples	51
3.6.6.	Loading Apparatus for ESR Stretching Experiments	51
3.6.7.	Milling Devices for Grinding Samples	52
3.6.8.	Preparation of Samples Containing Free Radicals by Sawing Technique	53
3.7.	Special Techniques for ESR Spectroscopy	53
4.	ESR Study of Polymerization Processes	
4.1.	Homogeneous Chain-growth Polymerization	61
4.2.	Ionizing Polymerization	62
4.2.1.	Solid-state Polymerization	62
4.2.1.1.	Olefin Monomers	64
4.2.1.2.	Dienes	67
4.2.1.3.	Cyclic Olefines	73
4.2.1.4.	Vinyl Monomers	74
4.2.1.4.1.	Acrylic and Methacrylic Acid Monomers	74
4.2.1.4.2.	Acrylamides	75
4.2.1.4.3.	Methyl Methacrylate	76
4.2.1.4.4.	Acrylonitrile and Methacrylonitrile	77
4.2.1.4.5.	Vinyl Acetate	78
4.2.1.4.6.	Styrene	80
4.2.1.4.7.	N-Vinylcarbazole	81
4.2.1.4.8.	Radical Pairs in γ -Irradiated Vinyl Monomers	81
4.2.1.5.	Cyclic Monomers	84
4.2.2.	Polymerization in Organic Glass Matrices	85
4.2.2.1.	ESR Studies of Ionic Processes in γ -Irradiated Organic Glasses	85
4.2.2.2.	ESR Studies of Ionic Polymerization in Organic Glass Matrices	88
4.2.2.2.1.	Nitroethylene	89
4.2.2.2.2.	Isobutene	90
4.2.2.2.3.	1,3-Butadiene	91
4.2.2.2.4.	Vinyl Ethers	93
4.2.2.2.5.	Acrylic Acid	94
4.2.2.2.6.	Methyl Methacrylate	96
4.2.2.2.7.	Acrylonitrile	97
4.2.2.2.8.	Styrene and α -Methylstyrene	98
4.2.3.	Ionizing Polymerization — Miscellaneous Problems	100
4.3.	Photopolymerization	100
4.3.1.	Photosensitized by Hydrogen Peroxide	101
4.3.2.	Photosensitized by Hydroperoxides and Peroxides	101
4.3.3.	Photosensitized by Diacyl Peroxides and Tert-Butyl Peresters	105
4.3.4.	Photosensitized by Dialkyl Peroxydicarbonates	105
4.3.5.	Photosensitized by Benzophenone	106

4.3.6.	Quinones	107
4.3.7.	Photosensitized by Azo-Compounds	108
4.3.8.	Photosensitized by Metal Halides	111
4.3.9.	Photosensitized by Metal Acetylacetonates	112
4.4.	Thermal Polymerization	113
4.4.1.	Application of a Polymer Matrix for Studies of Growing Chain Radicals at High Pressure	113
4.4.2.	Stabilization of Free Radicals on the Surface of Synthetic Zeolites	114
4.4.3.	Popcorn Polymerization	115
4.4.4.	Thermal Polymerization — Miscellaneous Problems	115
4.5.	Polymerization Initiated by Mechano-radicals	116
4.6.	Polymerization Initiated by Various Free Radical Initiation Systems	117
4.6.1.	Hydroperoxide-SO ₂ System	117
4.6.2.	Tetraphenylborate-Organic Acid Systems	119
4.6.3.	Redox Systems	122
4.6.3.1.	Polymerization Initiated by Redox Systems	127
4.6.3.1.1.	Acrylic and Methacrylic Acid Monomers	127
4.6.3.1.2.	Acrylamides	130
4.6.3.1.3.	Acrylonitrile	131
4.6.3.1.4.	Vinyl Esters	131
4.6.3.1.5.	Copolymerization of Vinyl Acetate and Acrylonitrile with Various Comonomers	138
4.6.3.1.6.	Allyl Monomers	142
4.6.3.1.7.	Miscellaneous Monomers	146
4.7.	Anionic Polymerization	147
4.7.1.	Introduction	147
4.7.2.	ESR Study of Ion Pairs, Free Ions, and Electron-transfer Reactions	149
4.7.3.	Initiation of Polymerization by Electron Transfer	156
4.7.4.	Initiation of Polymerization with Stable Alkali Metal Complexes .	158
4.7.4.1.	Polycyclic Aromatic Complexes	158
4.7.4.2.	Ketyl Complexes	158
4.7.4.3.	Aromatic Nitrile Complexes	160
4.7.4.4.	Pyridyl Complexes	160
4.7.4.5.	Organic Sulphur Complexes	161
4.8.	Cationic Polymerization	162
4.8.1.	Photo-Induced Cationic Polymerization	165
4.8.2.	Cationic Polymerization Initiated with Lewis Acids	166
4.9.	Heterogenous Chain-Growth Polymerization	167
4.9.1.	Ziegler-Natta Catalysts	167
4.9.2.	Phillips Catalysts	170
4.9.3.	Other Metal Catalysts for Polymerization	171
4.9.4.	Polymerization Initiated by Clays	171
4.9.5.	Polymerization Initiated by Silica Gel	171
4.9.6.	Polymerization Initiated by Molecular Sieves	172

Table of Contents

5.	ESR Study of Degradation Processes in Polymers	173
5.1.	Radiation and Photo-Degradation of Polymers	173
5.1.1.	Polyolefines	173
5.1.1.1.	n-Alkane Single Crystals	173
5.1.1.2.	Polyethylene	173
5.1.1.2.1.	Radical Formation Under Ionizing Radiation	173
5.1.1.2.2.	Radical Formation Under UV-Irradiation	176
5.1.1.2.2.1.	ESR Studies on Photosensitized Degradation of Polyethylene	177
5.1.1.2.3.	Conversion of Free Radicals Under Light Irradiation and Warming	178
5.1.1.2.4.	Morphological Effects on the Formation and Behavior of Radicals	181
5.1.1.2.5.	Decay of Free Radicals	182
5.1.1.2.6.	Ethylene Copolymers	184
5.1.1.3.	Polypropylene	184
5.1.1.3.1.	Radical Formation Under Ionizing Radiation	184
5.1.1.3.2.	Radical Formation Under UV-Irradiation	186
5.1.1.4.	Molecular Motions in Solid Polyolefines	188
5.1.1.5.	Radical Pairs in γ -Irradiated Polyolefines	189
5.1.1.6.	Poly-1-butene	193
5.1.1.7.	Polyisobutylene	194
5.1.1.8.	Poly-3-methyl-1-butene	196
5.1.1.9.	Poly-4-methyl-1-pentene	196
5.1.1.10.	Trapped Electrons in Polyolefines	198
5.1.2.	Polydienes	198
5.1.2.1.	Polybutadiene	198
5.1.2.2.	Polyisoprene	200
5.1.2.3.	Polypiperylene	203
5.1.2.4.	Polychloroprene	203
5.1.3.	Poly(methyl acrylate) and Poly(methyl methacrylate)	204
5.1.4.	Polystyrenes	206
5.1.5.	Poly(vinyl chloride) and Poly(vinylidene chloride)	209
5.1.6.	Fluorinated Polymers	212
5.1.7.	Poly(vinyl acetate)	215
5.1.8.	Poly(vinyl alcohol)	216
5.1.9.	Polynitroethylene	217
5.1.10.	Polyvinylpyridines	218
5.1.11.	Poly(vinyl pyrrolidone)	221
5.1.12.	Polyethers	222
5.1.12.1.	Polyoxymethylene	222
5.1.12.2.	Polyoxyethylene	223
5.1.12.3.	Poly-3,3-bis(chloromethyl)oxethane	224
5.1.12.4.	Poly(2,6-dimethyl-1,4-phenyleneoxide)	225
5.1.12.5.	Polyglycols	226
5.1.13.	Polycarbonates	227
5.1.14.	Polyesters	227
5.1.14.1.	Poly(β -propiolactone)	227
5.1.14.2.	Linear Aliphatic Polyesters	228

5.1.14.3.	Poly(ethylene terephthalate)	228
5.1.14.4.	Poly(ethylene-2,6-naphthalene-dicarboxylate)	230
5.1.15.	Polyamides	230
5.1.16.	Polyurethanes	232
5.1.17.	Sulphur-Containing Polymers	232
5.1.18.	Polysiloxanes	233
5.1.19.	Biopolymers	235
5.1.19.1.	Cellulose	235
5.1.19.2.	Starch	240
5.1.19.3.	Other Polysaccharides	241
5.1.19.4.	Lignin	241
5.1.19.5.	Wool	242
5.1.19.6.	Polynucleotides	242
5.2.	Free Radicals Formed in Glow Discharge of Polymers	245
5.3.	Anionic Degradation of Vinylaromatic Polymers	245
5.4.	Reaction of Polymers with Hydroxy Radicals	247
6.	ESR Study of Polymers in Reactive Gases	249
6.1.	Molecular Oxygen	249
6.2.	Singlet Oxygen	249
6.3.	Atomic Oxygen	251
6.4.	Atomic Hydrogen	251
6.5.	Atomic Nitrogen	252
6.6.	Noble Gases	252
6.7.	Other Gases	253
7.	ESR Studies of the Oxidation of Polymers	254
7.1.	Radiation-Induced Oxidation of Polymers	254
7.2.	Polyethylene	255
7.3.	Polypropylene	257
7.4.	Poly(tetrafluoroethylene)	261
7.5.	ESR Studies of Antioxidants	267
8.	ESR Studies of Molecular Fracture in Polymers	274
8.1.	Introduction	274
8.2.	Generation of Submicrocracks	274
8.3.	Generation of Free Radicals in Mechanically Deformed Poly- ethylene	278
8.4.	ESR Study of Free Radicals Formed During Fracture in Rubber	280
8.5.	ESR Study of Fatigue Processes in Polymers	282
8.6.	ESR Study of Free Radicals Formed During Grinding and Machining of Polymers	283
8.7.	Anomalous Behavior of Free Radicals Obtained by Sawing Technique	285
8.8.	Mechanical Degradation of Polymers in Frozen Solution Matrix	286

Table of Contents

9.	ESR Studies of Graft Copolymerization	287
9.1.	Graft Copolymerization of Polyethylene	287
9.2.	Cellulose Graft Copolymers	289
9.3.	Miscellaneous Problems	290
10.	ESR Studies of Crosslinking	292
10.1.	ESR Study of Enhanced Crosslinking of Polymers	292
10.2.	ESR Study of Free Radicals Observed During the Curing of Unsaturated Polyester Resins	292
10.3.	ESR Study of the Vulcanization of Rubber	292
10.4.	ESR Spectra of Light-Irradiated Poly(vinyl cinnamate)	293
11.	Application of Stable Free Radicals in Polymer Research	294
11.1.	Nitroxide Radicals	294
11.2.	Spin-Probe Technique	297
11.3.	Spin-Trapping Technique	301
11.4.	Spin-Labeling Technique	305
12.	ESR Spectroscopy of Stable Polymer Radicals and their Low Molecular Analogues	312
12.1.	Poly(triphenylmethyl) Radicals	312
12.2.	Poly(α,α' -diphenyl-p-xylene) Radicals	314
12.3.	Polyphenoxy Radicals	314
12.4.	Poly(triphenylhydrazyl) Radicals	317
12.5.	Polymers Containing Stable Free Radicals of the Nitroxide Type	326
12.6.	Poly(pyridinyl) Radicals	330
12.7.	Poly(verdazyl) Radicals	331
12.8.	Polymers Containing Stable Free Radicals of the Tetrazine Type	336
12.9.	Polyradical Anions	336
12.10.	ESR Study of Donor-Acceptor Polymer Complexes	340
12.11.	Organic Polymeric Semiconductors	340
12.12.	Free Radicals Formed by Pyrolysis of Polymers	343
12.13.	Free Radicals in Carbon Black	344
13.	ESR Study of Ion-Exchange Resins	346
