

CONTENTS

- 1 Introduction 1**
 - 1-1 Types of stainless steels 1
 - 1-2 Identification of stainless steels 3
 - 1-3 U. S. production of stainless steels 4
 - 1-4 Stainless steelmaking practice 5
 - 1-5 The more prevalent types of corrosion encountered with stainless steels 6
- 2 Composition, Structure, and Mechanical Properties 9**
 - 2-1 Austenitic stainless steels 9
 - 2-1-1 Nickel stainless steels 9
 - The AISI 300 series, Delta ferrite, Sensitization, Martensites induced by strain or subzero cooling, Sulfide inclusions
 - 2-1-2 Nickel-manganese-nitrogen stainless steels 17
 - 2-1-3 Duplex stainless steels 19
 - 2-1-4 Higher alloys 20
 - 2-2 Ferritic stainless steels 21
 - 2-2-1 The AISI 400 series 21
 - The ductile-to-brittle transition, 475°C embrittlement, Sigma phase embrittlement and high temperature embrittlement, Weld ductility, Sensitization
 - 2-2-2 New high chromium, low interstitial ferritic stainless steels 30

2-3	Martensitic stainless steels	32
2-3-1	The AISI 400 series	32
2-3-2	Effects of tempering	35
2-4	Precipitation hardening stainless steels	36
2-5	Cast stainless steels	42
2-5-1	Corrosion resistant cast stainless steels	42
	Austenitic cast stainless steels, Martensitic, ferritic, and precipitation hardening cast stainless steels	
2-5-2	Heat resistant cast stainless steels	47
3	Electrochemistry	49
3-1	Mixed potential theory	49
3-2	Measurement of corrosion rate by extrapolation	50
3-3	Measurement of corrosion rate by linear (resistance) polarization	53
3-4	The active-passive transition and passivity	54
3-5	Anodic and cathodic protection	57
3-6	Application of electrochemical techniques to evaluate localized corrosion	61
4	Pitting	63
4-1	Introduction	63
4-2	Techniques for measuring tendency for pitting	64
4-2-1	Electrochemical techniques	64
4-2-2	Ferric chloride tests	68
4-3	Effects of composition	70
4-4	Effects of microstructure	74
4-5	Effects of environment	81
4-6	Effects of surface condition	85
5	Crevice Corrosion	88
5-1	Introduction	88
5-2	Techniques for measuring tendency for crevice corrosion	91
5-2-1	Electrochemical techniques	91
5-2-2	Mathematical treatments of crevice corrosion	96
5-2-3	Natural crevice corrosion tests	96
5-2-4	Ferric chloride test	98

- 5-3 Effects of composition 99
- 5-4 Effects of microstructure 103
- 5-5 Other factors 104
- 5-6 Avoidance of crevice corrosion 108

- 6 Intergranular Corrosion 110
 - 6-1 Introduction 110
 - 6-2 Techniques for measuring tendency to intergranular corrosion 112
 - 6-2-1 Acid tests 112
 - 6-2-2 Electrochemical evaluations 116
 - 6-3 Sensitization produced by welding 117
 - 6-4 Knife-line attack 119
 - 6-5 Polythionic acid cracking 120
 - 6-6 Effect of composition and structure 122
 - 6-6-1 Austenitic stainless steels 122
 - 6-6-2 Ferritic stainless steels 129
 - The AISI 400 series, High chromium, low interstitial ferritic stainless steels
 - 6-6-3 Duplex stainless steels 132
 - 6-7 Intergranular corrosion of annealed (nonsensitized) stainless steels 134

- 7 Stress Corrosion Cracking 139
 - 7-1 Introduction 139
 - 7-2 Chloride cracking 142
 - 7-2-1 General background 142
 - 7-2-2 Austenitic stainless steels 144
 - The magnesium chloride test, Effects of composition, Effects of stress, Effects of environment, Effects of microstructure
 - 7-2-3 Ferritic stainless steels 166
 - Background, Effects of composition, Effects of microstructure
 - 7-2-4 Duplex stainless steels 170
 - 7-2-5 Martensitic and precipitation hardening stainless steels 171

7-3	Caustic cracking	172
7-3-1	General background	172
7-3-2	Austenitic stainless steels and higher alloys	172
7-3-3	Ferritic, duplex, and martensitic stainless steels	176
7-4	Oxygen cracking	180
7-5	Cracking in other environments	181
7-6	Hydrogen embrittlement	181
7-6-1	General background	181
7-6-2	Cracking in environments not containing sulfides	184
7-6-3	Cracking in environments containing sulfides	187
8	Corrosion Fatigue, Galvanic Corrosion, Erosion-Corrosion, and Cavitation Damage	194
8-1	Corrosion fatigue	194
8-1-1	Introduction	194
8-1-2	Effects of metallurgical variables	197
8-1-3	Effects of test and environmental variables	200
8-2	Galvanic corrosion	203
8-3	Erosion-corrosion	207
8-4	Cavitation damage	208
9	General Corrosion	210
9-1	Introduction	210
9-2	Expressions of corrosion rate	212
9-3	Acids	217
9-3-1	Sulfuric acid	217
9-3-2	Hydrochloric acid	221
9-3-3	Phosphoric acid	222
9-3-4	Nitric acid	223
9-3-5	Organic acids	226
9-3-6	Other acids	228
9-4	Alkalies	229
10	Corrosion by Hot Gases and Molten Compounds	232
10-1	Introduction	232

- 10-2 Oxidation 233
 - 10-2-1 Introduction 233
 - 10-2-2 Characteristics of oxidation 233
 - 10-2-3 Effects of composition 235
 - 10-2-4 Effects of microstructure 240
 - 10-2-5 Effects of environment 243
- 10-3 Sulfidation 245
 - 10-3-1 Introduction 245
 - 10-3-2 Sulfur dioxide environments 246
 - 10-3-3 Hydrogen-hydrogen sulfide environments 247
 - 10-3-4 Sulfur vapor 247
 - 10-3-5 Combustion atmospheres 247
- 10-4 Carburization 251
- 10-5 Nitriding 254
- 10-6 Halogen gases 254
- 10-7 Molten compounds 256
 - 10-7-1 Fuel ash 256
 - 10-7-2 Liquid metals and molten salts 257
- Appendix Trademarks* 260
- Typical properties of wrought stainless steels* 263
- Index* 267
