

Contents

1	The Structure of Polymers	1
1.1	Chemical Composition	1
1.1.1	Polymerization	1
1.1.2	Cross-linking and Chain Branching	3
1.1.3	Molecular Weight and Molecular-Weight Distribution	3
1.1.4	Chemical and Steric Isomerism and Stereoregularity	5
1.1.5	Blends, Grafts and Copolymers	6
1.2	Physical Structure	7
1.2.1	Rotational Isomerism	7
1.2.2	Orientation and Crystallinity	7
2	The Mechanical Properties of Polymers:	
	General Considerations	15
2.1	Objectives	15
2.2	The Different Types of Mechanical Behaviour	15
2.3	The Elastic Solid and the Behaviour of Polymers	17
2.4	Stress and Strain	19
2.4.1	The State of Stress	19
2.4.2	The State of Strain	21
2.5	The Generalized Hooke's Law	24
3	The Behaviour of Polymers in the Rubber-Like State: Finite Strain Elasticity	29
3.1	The Generalized Definition of Strain	29
3.2	The Definition of Components of Stress	35
3.3	The Stress-Strain Relationships	35
3.4	The Use of a Strain-Energy Function	41
3.4.1	Thermodynamic Considerations	41
3.4.2	The Form of the Strain-Energy Function	44

3.4.3	The Strain Invariants	45
3.4.4	The Stress-Strain Relations	48
3.5	Experimental Studies of Finite-Elastic Behaviour in Rubbers	51
4	The Statistical Molecular Theories of the Rubber-Like State	61
4.1	Thermodynamic Considerations	61
4.1.1	The Thermoelastic-inversion effect	62
4.1.2	The Statistical Theory	63
4.2	The Internal-Energy Contribution to Rubber Elasticity	72
4.3	The Molecular Interpretation of Higher Order Terms in the Strain-Energy Function	75
5	Linear Viscoelastic Behaviour	77
5.1	Viscoelastic Behaviour	77
5.1.1	Linear Viscoelastic Behaviour	77
5.1.2	Creep	79
5.1.3	Stress Relaxation	82
5.2	Mathematical Treatment of Linear Viscoelastic Behaviour	83
5.2.1	The Boltzmann Superposition Principle and the Definition of Creep Compliance	84
5.2.2	The Stress-Relaxation Modulus	87
5.2.3	The Formal Relationship Between Creep and Stress Relaxation	87
5.2.4	Mechanical Models, Relaxation and Retardation-Time Spectra	88
5.2.5	The Maxwell Model	89
5.2.6	The Kelvin or Voigt Model	90
5.2.7	The Standard Linear Solid	92
5.2.8	Relaxation-Time Spectra and Retardation-Time Spectra	94
5.3	Dynamical Mechanical Measurements: The Complex Modulus and Complex Compliance	95
5.3.1	Experimental Patterns for G_1 , G_2 , etc. as a Function of Frequency	97
5.4	The Relationships between the Complex Moduli and the Stress-Relaxation Modulus	101
5.4.1	Formal Representations of the Stress-Relaxation Modulus and the Complex Modulus	102

5.4.2	Formal Representations of the Creep Compliance and the Complex Compliance	105
5.4.3	The Formal Structure of Linear Viscoelasticity	106
5.5	The Relaxation Strength	107
6	The Measurement of Viscoelastic Behaviour	110
6.1	Creep and Stress Relaxation	111
6.1.1	Creep: Conditioning	111
6.1.2	Extensional Creep	111
6.1.3	Extensometers	112
6.1.4	High-Temperature Creep.	114
6.1.5	Torsional Creep	115
6.1.6	Stress Relaxation	115
6.2	Dynamic Mechanical Measurements; The Torsion Pendulum	118
6.3	Resonance Methods	121
6.3.1	The Vibrating-Reed Technique	121
6.4	Forced-Vibration Non-Resonance Methods	124
6.4.1	Measurement of Dynamic Extensional Modulus	125
6.5	Wave-Propagation Methods	127
7	Experimental Studies of the Linear Viscoelastic Behaviour of Polymers	133
7.1	General Introduction	133
7.1.1	Amorphous Polymers	133
7.1.2	Temperature Dependence of Viscoelastic Behaviour	136
7.1.3	Crystalline Polymers	138
7.2	Time-Temperature Equivalence and Superposition	140
7.3	Transition-State Theories	142
7.3.1	The Site-Model Theory	145
7.4	The Time-Temperature Equivalence of the Glass-Transition Viscoelastic Behaviour in Amorphous Polymers and the Williams, Landel and Ferry (WLF) Equation	148
7.4.1	The Williams, Landel and Ferry Equation, the Free-Volume Theory and other Related Theories	155
7.4.2	The Free-Volume Theory of Cohen and Turnbull	156
7.4.3	The Statistical Thermodynamic Theory of Adam and Gibbs	156

7.4.4	An Objection to Free-Volume Theories	158
7.5	Normal-Mode Theories Based on Motion of Isolated Flexible Chains	158
8	Relaxation Transitions and Their Relationship to Molecular Structure	166
8.1	Relaxation Transitions in Amorphous Polymers: Some General Features	166
8.2	Glass Transitions in Amorphous Polymers: Detailed Discussion	168
8.2.1	Effect of Chemical Structure	168
8.2.2	Effect of Molecular Weight and Cross-Linking	171
8.2.3	Blends, Grafts and Copolymers	173
8.2.4	Effect of Plasticizers	175
8.3	The Crankshaft Mechanism for Secondary Relaxations	176
8.4	Relaxation Transitions in Crystalline Polymers	177
8.4.1	General Discussion	177
8.4.2	Relaxation Processes in Polyethylene	181
8.4.3	Application of the Site Model	188
8.4.4	Use of Mechanical Anisotropy	192
8.4.5	Conclusion	194
9	Non-Linear Viscoelastic Behaviour	196
9.1	General Introduction	196
9.2	The Design Engineer's Approach to Non-Linear Viscoelasticity	197
9.2.1	Use of the Isochronous Stress-Strain Curves	197
9.2.2	Power Laws for Non-Linear Viscoelasticity	204
9.3	The Molecular Approach	205
9.4	The Rheologist's Approach to Non-Linear Viscoelasticity	207
9.4.1	Large-Strain Behaviour of Elastomers	207
9.4.2	Creep and Recovery of Plasticized Polyvinyl Chloride	210
9.4.3	Empirical Extension of Boltzmann Superposition Principle	211
9.5	Formal Extension of the Boltzmann Superposition Principle	214
9.5.1	Mathematical Rigour	218
9.5.2	The Practical Application of the Multiple-Integral Representation	219

10 Anisotropic Mechanical Behaviour	225
10.1 The Description of Anisotropic Mechanical Behaviour	225
10.2 Mechanical Anisotropy in Polymers	226
10.2.1 The Elastic Constants for Specimens Possessing Fibre Symmetry	226
10.2.2 The Elastic Constants for Specimens Possessing Orthorhombic Symmetry	229
10.3 Measurement of Elastic Constants	230
10.3.1 Measurements on Films or Sheets	230
10.3.2 Measurements on Fibres and Monofilaments	234
10.4 Experimental Studies of Mechanical Anisotropy in Polymers	239
10.4.1 Low-Density Polyethylene Sheets	240
10.4.2 Nylon and Polyethylene Terephthalate Monofilaments	243
10.4.3 Polyethylene Terephthalate, Nylon, Polyethylene and Polypropylene Monofilaments	243
10.4.4 Rolled and Annealed Polyethylene Sheets of Orthorhombic Symmetry	249
10.5 Correlation of the Elastic Constants of an Oriented Polymer with those of an Isotropic Polymer. The Aggregate Model	253
10.6 Mechanical Anisotropy of Fibres and Films of Intermediate Molecular Orientation	257
10.7 The Sonic Velocity	262
10.8 Other Theories of Mechanical Anisotropy	264
10.9 Anisotropic Viscoelastic Behaviour	264
11 The Yield Behaviour of Polymers	270
11.1 Discussion of Load–Elongation curve	271
11.1.1 Necking and the Ultimate Stress	272
11.1.2 Necking and Cold-Drawing: A Phenomenological Discussion	274
11.1.3 Use of the Considère Construction	276
11.1.4 Definition of Yield Stress	278
11.2 Ideal Plastic Behaviour	278
11.2.1 The Yield Criterion: General Considerations	279
11.2.2 The Tresca Yield Criterion	281
11.2.3 The Von Mises Yield Criterion	281
11.2.4 The Coulomb Yield Criterion	283

11.2.5	Geometrical Representations of the Tresca, Von Mises and Coulomb Yield Criteria	283
11.2.6	Combined Stress States	286
11.2.7	Yield Criteria for Anisotropic Materials	287
11.2.8	The Stress–Strain Relations for Isotropic Materials	288
11.2.9	The Plastic Potential	289
11.2.10	The Stress–Strain Relations for an Anisotropic Material of Orthorhombic Symmetry	289
11.3	The Yield Process	290
11.3.1	The Adiabatic Heating Explanation	290
11.3.2	The Isothermal Yield Process; the Nature of the Load Drop.	295
11.4	Experimental Evidence for Yield Criteria in Polymers	297
11.4.1	Isotropic Glassy Polymers	297
11.4.2	Anisotropic Polymers	301
11.4.3	The Band Angle in the Tensile Test	307
11.5	Simple Shear-Stress Yield Tests	309
11.5.1	The Bauschinger Effect	312
11.6	Influence of Hydrostatic Pressure on Yield	313
11.7	The Temperature and Strain-Rate Dependence of Yield and Drawing Processes	314
11.8	The Molecular Interpretations of Yield and Cold-Drawing	318
11.8.1	The Yield Process	318
11.8.2	Cold-Drawing	322
11.9	Deformation Bands in Oriented Polymers	326
12	Breaking Phenomena	330
12.1	Definition of Tough and Brittle Behaviour in Polymers	330
12.1.1	Factors Influencing Brittle–Ductile Behaviour	332
12.2	Brittle Fracture of Polymers	340
12.2.1	The Continuum Approach: Application of the Griffith Theory	340
12.2.2	The Molecular Approach	348
12.3	Craze Formation	349
12.3.1	Stress Criterion for Craze Formation	350
12.4	Impact Strength of Polymers	352
12.4.1	High-Impact Polyblends	355
12.4.2	Crazing and Stress-Whitening	357
12.5	The Nature of the Fracture Surface in Polymers	358

Contents
