

CONTENTS

<i>Preface</i>	xi
<i>Acknowledgments</i>	xiii
<i>Units and Conversion Factors</i>	xv

Introduction	1
Suggested References	3

Chapter I	Survey of Electromagnetic Interactions with Gases	5
	A. The Second-Order Processes	5
	B. The First-Order Process, Photoabsorption	9
	C. The Hierarchy of Photoabsorption Processes	11
	References	13

Chapter II	Photoabsorption below the First Ionization Limit	14
	Appendix	18
	References	21

Chapter III	Quasi-Discrete States above the First Ionization Potential	22
	A. Types of "Discrete" Excitation above the First Ionization Potential	22
	B. Photoelectron Spectroscopy	26

	C. Discrete State-Continuum Interaction: Autoionization and Predissociation	27
	D. The Nature of the Perturbation Matrix Elements in Autoionization	31
	References	34
Chapter IV	The Ionization Continuum	35
	A. The Variation of Cross Section in the Vicinity of the Ionization Threshold	35
	B. The Energy Region for Inner-Shell Excitation	38
	C. "Cooper Minima"	44
	D. Dependence of Absorption Cross Section upon the Type of Orbital (s, p, d, . . .) from Which Ejection Takes Place	48
	E. Molecular "Barriers" to Electron Escape	53
	F. Multiple Electron Excitations and Ionizations	55
	G. Oscillator Strength Distribution in the Continuum	56
	H. Dissociation in the Ionization Continuum	62
	Summary of Useful Sum Rules	63
	Appendix 1. Quantum Mechanical Derivation of Thomas-Reiche-Kuhn Sum Rule	64
	Appendix 2. Relationship of the Electric-Dipole Matrix Elements to the Ground State Wave Function	68
	Appendix 3. Interaction of Fast Charged Particles with Atoms and Molecules—A Digression	69
	References	71
Chapter V	Total Photoabsorption and Photoionization Cross Sections for Selected Molecules	73
	A. Monatomic Gases	75
	B. Diatomic Molecules	93
	C. Triatomic Molecules	115
	D. Polyatomics	125
	References	150
Chapter VI	Partial Cross Sections	155
	A. General Considerations	155
	B. Atoms	169
	C. Diatomic Molecules	186
	D. Triatomic Molecules	239
	E. Polyatomic Molecules	265
	Appendix 1. Table-Photoionization References for Other Molecules	329
	Appendix 2. Derivation of the "Energy Gap Law" Simplified	337
	Appendix 3. Classical Approximation and Dirichlet Integral	340

	Appendix 4. Metastable Ions in Magnetic Mass Spectrometers	341
	References	342
Chapter VII	Angular Distribution of Photoelectrons	358
	A. General Form of the Equation	358
	B. Calculations of Angular Distributions	379
	C. Experimental Considerations	390
	D. Summary of Other Recent Measurements of β	399
	Appendix	402
	References	404
Chapter VIII	Instruments and Methods	408
	A. Techniques for Measuring Photoabsorption Cross Sections and Ionization Yields	408
	B. Photoionization Mass Spectrometry	410
	C. Photoelectron Spectroscopy	431
	D. Photoelectron-Photoion Coincidence Spectroscopy	460
	References	461
