

Table of Contents

Preface	12
Units and Factors	14
Chapter 1 Preliminary information including some definitions and some elementary chemistry	
1.1 Historical outline.	19
1.2 Surfactants, builders and fillers	21
1.3 Types of soaps and soapmaking terms	23
1.4 Acids, alkalis, and buffers. pH and indicators	27
1.5 Inorganic materials important in the detergents industry.	35
1.5.1 Common salt, or sodium chloride	35
1.5.2 Caustic soda, or sodium hydroxide	36
1.5.3 Caustic potash, or potassium hydroxide.	38
1.5.4 Sodium carbonate	38
1.5.5 Sodium bicarbonate.	38
1.5.6 Sodium sesquicarbonate	38
1.5.7 Sodium silicates	38
1.5.8 Potassium silicates	40
1.5.9 Borax	40
1.5.10 Sodium phosphates	40
1.5.11 Potassium phosphates.	42
1.6 Bleaches, inorganic and organic	42
1.6.1 General	42
1.6.2 Sodium and other hypochlorites.	42

1.6.3	Substances which produce available chlorine when dissolved	45
1.6.4	Sodium chlorite	46
1.6.5	Hydrogen peroxide and the per-salts	46
1.6.6	Reducing bleaches	46
1.7	A scheme for the analysis of soap products.	47
1.7.1	General	47
1.7.2	Household soap.	48
1.7.3	Soap powder	49
1.8	Specifications	50
1.9	Some technical implications of weight control legislation	52
1.10	Water hardness and water softening.	53
1.11	Environmental problems.	56
1.11.1	General	56
1.11.2	Biodegradability	56
1.11.3	Eutrophication	57
1.11.4	Boron	58

Chapter 2 What detergents have to do and how they do it.

The roles of various ingredients and some principles of formulation. Market survey and recent trends

2.1	Detergent duties	59
2.2	How detergents work	60
2.3	Additional information concerning ingredients and their roles	76
2.3.1	Anionic surfactants	76
2.3.2	Nonionic surfactants, including lather boosters	81
2.3.3	Cationic surfactants	82
2.3.4	Hydrotropes.	82
2.3.5	Builders and sequestrants	83
2.3.6	Antiredepositon agents.	85
2.3.7	Optical brighteners	86
2.3.8	Enzymes	90
2.3.9	Anti-caking agents	91
2.4	Types of detergent products and their formulation	91
2.4.1	General	91
2.4.2	Foam, lather, or suds	91
2.4.3	Heavy duty fabric washing powders	92
2.4.4	Light duty powders	96
2.4.5	Dishwashing and other light duty liquids	96
2.4.6	Floor and other hard surface cleaning products	101
2.4.7	Heavy duty liquid fabric washing detergents	102
2.4.8	Miscellaneous products.	103
2.5	Market survey. The rise and fall of product types; and some recent trends.	103
2.6	Products for use in commercial and institutional laundries.	116

Chapter 3 The oils and fats: their nature, storage and pretreatment

3.1	The fatty acids	118
3.2	The fatty acid compositions of oils and fats	120
3.3	Other differences between fats	124
3.4	Some analytical characteristics of oils and fats	125
3.4.1	General	125
3.4.2	Moisture and dirt.	127
3.4.3	Titre	127
3.4.4	FFA (free fatty acid) content, acid value, saponification value and ester value.	127
3.4.5	Content of unsaponifiable matter	127
3.4.6	Iodine value	128
3.4.7	Reichert-Meissl, Polenske and Kirschner values	128
3.4.8	Specific gravity, or relative density	128
3.4.9	Rosin content and tests for specific oils	128
3.5	Specifications. Qualities of tallows and greases	129
3.6	The pretreatment of oils and fats; and the production of by-products used in soaps	129
3.6.1	General	129
3.6.2	Soapstocks and acid oils, or acidulated soapstocks	134
3.6.3	Bleaching of oils and fats	135
3.7	Points in the selection of fat blends for various soaps	140
3.8	Fatty acid and glycerol contents of fats, and related matters. Glycerine credit.	143
3.9	Handling and storage of oils and fats. Deterioration of fatty materials	147

Chapter 4 The manufacture of soap base by direct saponification of oils and fats

4.1	General	152
4.2	Some principles.	152
4.2.1	Phase diagram	152
4.2.2	Saponification	154
4.2.3	The '66%' rule of Wigner; and related matters	156
4.3	Production of soap base by the traditional method in single vessels.	159
4.3.1	Plant.	159
4.3.2	Saponification	160
4.3.3	Graining or washing.	160
4.3.4	Fitting.	164
4.3.5	Wigner system of quantitative soapboiling	167
4.4	Developments of the traditional process including the use of groups of vessels.	169
4.5	An additional principle.	169
4.6	The components used in modern soapmaking processes	171
4.6.1	Equipment for saponification	171

4.6.2	Equipment for washing	181
4.6.3	Equipment for fitting and final separation	186
4.7	Complete soapmaking plants	186
4.8	Plant performance	190
4.9	Preliminary treatment of spent lyes in the soapmaking department	192

Chapter 5 Manufacture and purification of fatty acids and the production of soap base from them. Miscellaneous methods of soap manufacture

5.1	General background	195
5.2	Fat splitting	196
5.2.1	Principles of fat splitting	196
5.2.2	Splitting plant and processes	200
5.3	Materials of construction for splitting and other fatty acid plants	207
5.4	Distillation of fatty acids	211
5.4.1	General	211
5.4.2	Distillation principles	211
5.4.3	Distillation equipment	217
5.4.3.1	Vaporizers	217
5.4.3.2	Fractionators, condensers and strippers	226
5.4.3.3	Complete stills	223
5.5	Separation of solid and liquid fatty acids	225
5.6	Production of soap base from fatty acids	226
5.7	Comparison between soap manufacture by direct saponification and by the fatty acid route	234
5.8	Miscellaneous methods of soap production	234
5.8.1	Sodium carbonate saponification of oils and fats	234
5.8.2	Saponification with vaporization of the glycerol	235
5.8.3	Manufacture of soap from sperm whale oil and low grade fish oils	235
5.9	Soaps made from synthetic fatty acids	236

Chapter 6 Production of solid soaps from soap base. Household soaps and toilet soaps

6.1	General	237
6.2	The older processes for household soaps	237
6.3	Some principles related to the production of extruded soaps	240
6.3.1	General	240
6.3.2	Solidification and drying	240
6.3.3	Extrusion, homogenization and plastic working	247
6.4	Properties of solid soaps	258
6.5	Ingredients added to household and toilet soaps	262
6.5.1	General	262
6.5.2	Preservatives	262

6.5.3	Perfumes	263
6.5.4	Colours, opacifiers and optical brighteners	264
6.5.5	Germicides and other medicinal ingredients	265
6.5.6	Superfating agents	267
6.5.7	Scum dispersants, leading to NSD tablets and bars	267
6.5.8	Miscellaneous ingredients	268
6.6	Efflorescence	268
6.7	Modern processes for the production of household soaps	269
6.8	Equipment for toilet soap production	272
6.9	Transparent and translucent soaps	280
6.10	Floating soaps.	283
6.11	Marbled toilet soaps.	284
6.12	Filled, or run, soaps	284
 Chapter 7 Soap powders		
7.1	General	287
7.2	Spray-chilled powders	288
7.3	Spray-dried powders	294
7.4	Other manufacturing processes.	295
 Chapter 8 The recovery and refining of glycerine		
8.1	General	296
8.2	Some analytical tests and specifications	297
8.2.1	Glycerol content	297
8.2.2	Non-volatile inorganic and organic residues, particularly in crude glycerines	298
8.2.3	Nitrogen	299
8.2.4	Arsenic	299
8.2.5	Sodium chlorate	299
8.2.6	Silver tests for reducing substances	299
8.2.7	Fatty acids and esters in refined glycerines	300
8.2.8	Chlorides in refined glycerines	300
8.2.9	Other tests	303
8.2.10	Specifications	303
8.3	Purification of soap lyes and sweet waters	303
8.4	Evaporation of purified liquors to crude glycerine	306
8.4.1	General	306
8.4.2	Water to be evaporated, salt to be separated, and crude glycerine produced	307
8.4.3	Thermal efficiency.	308
8.4.4	Types of heating unit	316
8.4.5	Removal and recovery of salt in the evaporation of soap lyes	318
8.4.6	Minimization of losses of glycerol.	322
8.4.7	Vacuum maintenance.	324
8.4.8	Evaporator control	325

8.4.9	Materials of construction for glycerine treatment and evaporation plants	325
8.4.10	Complete evaporation plants	326
8.5	Treatment of crude glycerine to remove low molecular mass fatty acids.	331
8.6	Distillation of glycerine	332
8.6.1	General	332
8.6.2	Chemical aspects of glycerine distillation	332
8.6.3	Vaporization principles.	334
8.6.4	Vaporization equipment	337
8.6.5	Spray arresters	343
8.6.6	Condensation, condensers, stripping columns, concentrators, and deodorizers.	343
8.6.7	Materials of construction for glycerine stills	349
8.6.8	Complete stills	349
8.7	Bleaching and the treatment of distillates with ion-exchange resins to upgrade quality.	355
8.8	Production of refined grades of glycerine without distillation.	355
8.8.1	Ion exclusion	355
8.8.2	Ion exchange	356
8.8.3	Reverse osmosis using semi-permeable membranes	357
Chapter 9 Sulphonation and sulphation		
9.1	General	358
9.2	Some physical properties of the sulphur trioxide/water system.	361
9.3	Sulphonation with concentrated sulphuric acid or oleum	362
9.4	Sulphonation with sulphur trioxide.	366
9.4.1	General	366
9.4.2	Air driers	367
9.4.3	Generation of sulphur trioxide gas	367
9.4.4	Sulphonation reactors	372
9.4.5	After treatment of the sulphonated mix.	384
9.4.6	Compositions of sulphonated and sulphated products.	386
9.4.7	Treatment of effluent air	387
9.4.8	Complete sulphonation plants using sulphur trioxide	387
Chapter 10 The manufacture of NSD (non-soapy detergent) powders		
10.1	General powder characteristics.	388
10.2	Methods of powder production	390
10.3	The spray drying process.	391
10.3.1	General	391
10.3.2	Principles of spray drying and thermal efficiency.	393
10.3.3	Spray drying practice	403
10.3.3.1	General	403
10.3.3.2	Raw materials handling and slurry preparation	403
10.3.3.3	After-treatment of slurry	407

10.3.3.4	Atomization	407
10.3.3.5	The tower	411
10.3.3.6	The hot gas generator and the fans	411
10.3.3.7	Treatment of the powder after the tower	415
10.3.3.8	Recovery and disposal of fines; and cleaning of the effluent gases	416
10.3.3.9	Complete spray drying plants.	420
10.4	Production of NSD powders without spray drying	421
10.4.1	General	421
10.4.2	Dry mixing.	421
10.4.3	Processes which include the addition of liquids	421
10.4.4	The Monsanto 'Fluff' process.	425
10.4.5	Drum drying.	425
Chapter 11 The manufacture of liquid detergents and miscellaneous detergent products		
11.1	Liquids	426
11.1.1	General	426
11.1.2	Liquid and cream soap products.	426
11.1.3	Dishwashing and other mobile NSD liquids.	427
11.1.4	Liquids for the washing of fabrics.	430
11.1.5	Thick liquids and creams.	430
11.1.6	Miscellaneous	431
11.2	Fabric washing detergents in measured doses	431
11.3	Scouring products	431
11.3.1	General	431
11.3.2	Abrasive powders	431
11.3.3	Production of abrasive powders from the mineral	433
11.3.4	Other ingredients; and the production of scouring powders	434
11.4	Machine dishwashing products	436
11.5	Soap chips, noodles, and flakes	438
11.6	Shaving soaps	439
11.7	Soft soaps	439
Appendix 1	Names and addresses of some companies and organizations	441
Appendix 2	Production and maintenance of vacuum.	446
Appendix 3	Elements of fan engineering.	452
Bibliography and other references.		460
Index		464
