

# CONTENTS

## **PREFACE** **iii**

## **INTRODUCTION** **1**

<b>Uncertainty in Science</b>	<b>2</b>
Theories and Experiments	2
Strategies for Influencing Attitudes	3
What Governs Our Belief About What's Going On	6
<b>Probability Revisited</b>	<b>7</b>
<b>Measurement Scales</b>	<b>8</b>
Four Types of Scales	8
Permissible Transformations	10
Scales and Statistical Applications	11

## **1 PROBABILITY THEORY** **13**

<b>Set Theory</b>	<b>13</b>
Finite and Infinite Sets	14
Notation for Specifying a Set	15
Subsets	15
Interacting Sets: Unions and Intersections	17
Universal Sets	17
Venn Diagrams: Pictorial Representations of Sets	18
Complements	20
The Empty Set	22
Mutual Exclusion and Exhaustion	22
Partitions	23
<b>Probability: Basic Rules and Tools</b>	<b>24</b>
Situations and Outcomes of Situations	24

More General Laws of Probability	26
Use of Venn Diagrams to Get a Feeling for Probabilities	30
A Different Sort of Pictorial Representation:	
The Contingency Table	32
Relationship Between Probabilities and Frequencies:	
In the Long Run	33
<b>Conditional Probability and Independence</b>	<b>35</b>
Conditional Probability	36
Relationship Between Conditional Probability $p(A   B)$	
and Conditional Probability $p(B   A)$	39
Independence	43
Computing Probabilities of Joint Events	45
Use of the Multiplication Rule in Conjunction with	
the Addition Rule	49
<b>Summary</b>	<b>51</b>
<b>Digression</b>	<b>52</b>
1-1 Probability and Everyday Life	52
<b>Problems</b>	<b>53</b>
 <b>2 RANDOM VARIABLES AND DISTRIBUTION 59</b>	
<b>Introduction to Frequency Distributions</b>	<b>60</b>
Random Variables	60
Construction of a Frequency Distribution	60
Histograms	62
<b>Probability Distribution</b>	<b>62</b>
Frequencies to Probabilities and Vice Versa	63
Empirical Versus Theoretical Distributions	64
Theoretical Frequency Distributions	67
<b>Discrete and Continuous Probability Distributions</b>	<b>69</b>
Some Important Characteristics of Probability Distributions	71
Probability Distributions of Continuous Random Variables	73
<b>Summary</b>	<b>80</b>
<b>Digressions</b>	<b>81</b>
2-1 A Geometric Distribution	81
2-2 Calculation of Areas	82
<b>Problems</b>	<b>83</b>
 <b>3 DESCRIPTIVE MEASURES 89</b>	
<b>Frequency Distributions Revisited</b>	<b>90</b>
Cumulative Distributions and Percentiles	91
Class Intervals	93
<b>Descriptive Statistics To Describe Data</b>	<b>95</b>
Measures of Central Tendency	96
Measures of Variability	102
<b>Means and Variances of Distributions</b>	<b>105</b>
Empirical Frequency Distributions	105

Empirical Probability Distributions	108
Discrete Theoretical Probability Distributions	111
Continuous Theoretical Probability Distributions	116
New Terms for Mean and Variance of Theoretical Distributions	116
<b>Standard Scores</b>	<b>117</b>
<b>Summary</b>	<b>119</b>
<b>Digressions</b>	<b>120</b>
3-1 If We Have Set of Deviation Scores Around Mean, Sum of These Scores Must Be Zero	120
3-2 Mean of a Geometric Distribution	121
<b>Problems</b>	<b>122</b>
<b>4 BINOMIAL DISTRIBUTION 125</b>	
<b>What a Binomial Distribution Is and How To Make One</b>	<b>125</b>
Number of Successes as a Random Variable	126
<b>Another Example</b>	<b>130</b>
Opinion Polls	130
<b>Characteristics of the Binomial Distribution</b>	<b>132</b>
Shape of the Binomial	132
Expected Value (Mean) and Variance of the Binomial Distribution	134
<b>Frequencies and Proportions</b>	<b>137</b>
Proportions	137
Binomial Distributions Using Proportions	137
Frequencies Versus Proportions: An Example	139
<b>Summary</b>	<b>140</b>
<b>Digressions</b>	<b>141</b>
4-1 Binomial Coefficients: Pascal's Triangle	141
4-2 Derivation of Expected Value of Binomial Distribution	142
4-3 Derivation of Variance of Binomial Distribution	143
<b>Problems</b>	<b>144</b>
<b>5 INTRODUCTION TO HYPOTHESIS TESTING: THE SIGN TEST 151</b>	
<b>Decision Making</b>	<b>152</b>
Correct and Incorrect Decisions	152
Crime and Punishment: A Specific Example	152
<b>The Role of Decision Making in Hypothesis Testing</b>	<b>154</b>
Samples and Populations: An Introduction	154
Hypotheses About the Population	154
The Data	156
Type I Versus Type II Errors	158
Construction of a Criterion	159
Our Decision	161
If Criterion Is Not Exceeded	162
<b>Hypothesis-Testing Steps</b>	<b>162</b>
<b>Summary</b>	<b>164</b>
<b>Problems</b>	<b>164</b>

**6 NORMAL DISTRIBUTION 167****Principal Characteristics of the Normal Distribution**

167

Mathematical Form of the Normal Distribution 168

Role of the Normal Distribution in the World 170

**The *z* Distribution**

172

Standard Scores 172

The *z*-Distribution Tables 174Using *z*-Distribution Tables To Compute

Probabilities 175

Calculations Involving the Normal Approximation to  
the Binomial 180**More About Hypothesis Testing: The *z*-Test**

184

An Illustrative Experiment: Lightbulb Lifetimes 185

Three Types of Alternative Hypotheses 185

One-Tailed/Two-Tailed "Paradox" 191

A Shortcut 192

**Summary**

193

**Digressions**

194

6-1 Pine Forests and Examinations: The Central Limit Theorem  
in Nature 1946-2 Mean and Variance of a Distribution of Standard  
Scores 195

6-3 Statement of The Null Hypothesis 197

**Problems**

197

**7 SAMPLING DISTRIBUTIONS AND  
HYPOTHESIS TESTING WITH MEANS 203****Populations and Samples**

204

Three Types of Probability Distributions 204

Relation of These Distributions to Data 207

**Sampling Distribution of Sample Means**

207

Mean of a Distribution of Sample Means 208

Variance of a Distribution of Sample Means 208

Calculating Probabilities Involving Means 211

**Hypothesis Testing with Means**

213

CAI Programs: Testing a Mean Against a Constant 213

Competing CAI Programs: Testing the Difference  
Between Two Means 216**Summary**

222

**Digressions**

223

7-1 Mean (Expected Value) of Sampling Distribution of Sample  
Means Based on Samples of Size  $n$  2237-2 Variance of Sampling Distribution of Sample Means Based  
on Samples of Size  $n$  2237-3 Relationship of Sampling Distribution to Binomial  
Distribution 226

7-4 Variance of A Distribution of Difference Scores 227

**Problems**

228

## 8 POWER 232

<b>Construction of Power Curves:</b>	
<b>SMARTIUM Revisited</b>	<b>234</b>
Calculation of Power for Specific Alternative Hypotheses	234
Power Curves: Power as Function of the Alternative Hypothesis	238
<b>Things That Affect Power</b>	<b>239</b>
Size of $\sigma_M$	239
The $\alpha$ -Level	245
Type of Test	246
<b>Power in a Two-Tailed Situation</b>	<b>249</b>
A Weird and Unusual Error: Correctly Rejecting $H_0$ for Wrong Reasons	249
<b>Accepting the Null Hypothesis</b>	<b>251</b>
Not Finding Something Doesn't Mean It's Not There	251
Failing to Reject the Null Hypothesis When There Is a Great Deal of Power	252
<b>Choosing Number of Subjects</b>	<b>253</b>
<b>Confidence Intervals</b>	<b>255</b>
Calculation of Confidence Intervals	256
Power and Confidence Intervals	259
Uses of Confidence Intervals	260
<b>Summary</b>	<b>262</b>
<b>Problems</b>	<b>263</b>

## 9 PARAMETER ESTIMATION 266

<b>Population Parameters from Sample Statistics</b>	<b>267</b>
Unbiased Estimates	268
Consistent Estimates	269
Sampling Distributions Revisited	269
<b>Estimation of the Population Variance</b>	<b>270</b>
Unbiasing the Estimate of $\sigma^2$	270
Meaning of Variance	271
Sums of Squares and Degrees of Freedom	272
Computational Formula for Variance	273
<b>Obtaining an Unbiased Estimate of Variance of Distribution of a Sample Means</b>	<b>274</b>
<b>Summary</b>	<b>275</b>
<b>Digressions</b>	<b>276</b>
9-1 Expected value of $S^2$	276
9-2 Why Is $S^2$ an Underestimate of $\sigma^2$ ?	277
<b>Problems</b>	<b>280</b>

## 10 t-TEST 282

<b>Testing a Mean Against a Constant</b>	<b>283</b>
Memory for the Mueller—Lyer Illusion: Introduction to the <i>t</i> -Test	284
Within-Subjects Designs	291
<b>Confidence Intervals and Hypothesis Testing: An Editorial Comment</b>	<b>294</b>

<b>Testing the Difference Between Two Sample Means</b>	<b>297</b>
Hypnosis and Memory: Design with Two Groups and Equal $n$ 's	297
A Note on Within- Versus Between-Subjects Designs	304
Complicating Matters: Unequal Numbers of Subjects	304
<b>Assumptions</b>	<b>310</b>
Violation of Assumptions	311
But Not To Worry (Usually)	311
The Scaling Assumption	312
Nonparametric Tests	313
<b>Summary</b>	<b>313</b>
<b>Problems</b>	<b>314</b>
 <b>11 ANALYSIS OF VARIANCE 322</b>	
<b>Between- and Within-Conditions Variance</b>	<b>323</b>
<b>Three Experimental Groups:</b>	
<b>Methods for Teaching Calculus</b>	<b>324</b>
Estimation of Population Variance	324
Confidence Intervals	327
Hypothesis-Testing Steps	328
<b>Computational Formulas for Analysis of Variance</b>	<b>336</b>
Formula for Mean Square Within	336
Formula For Mean Square Between	338
Analysis of Variance Summary Table	340
<b>Start-to-Finish Example:</b>	
<b>Toothpaste and Cavity Prevention</b>	<b>342</b>
Hypothesis Testing	344
Calculation of ANOVA Summary Table Entries	345
<b>Partition of Total Sum of Squares</b>	<b>346</b>
Dividing the Pie	347
<b>Aesthetics and Rules</b>	<b>349</b>
Relationship Between Degrees of Freedom and Sums of Squares	349
Square-and-Divide Rule	350
<b>Summary</b>	<b>350</b>
<b>Digressions</b>	<b>351</b>
11-1 More on the $F$ -Ratio	351
11-2 Proof That Mean of Group Means Is Equal to $T/N$	352
11-3 Linear Model	352
<b>Problems</b>	<b>353</b>
 <b>12 TWO-WAY ANALYSIS OF VARIANCE (AND BEYOND) 357</b>	
<b>Two-Factor Experiment: Effects of Incentive and Retention Interval on Memory Performance</b>	<b>358</b>
Combining Independent Variables: Factorial Designs	359
Hypothetical Data	360
<b>A Two-Way ANOVA</b>	<b>363</b>
Six-Condition One-Way ANOVA	364
Two-Way ANOVA	366

<b>Interactions</b>	<b>371</b>
Three Hypothetical Outcomes	371
Symmetry of Interactions	374
Scaling Problems	374
Statistical Treatment of Interactions	376
<b>A Complete Example: Short Term Memory Scanning</b>	<b>379</b>
The Sternberg Experiment	379
Scanning Letters Versus Words	380
Confidence Intervals	381
Hypothesis Testing	382
Conclusions from the Experiment	385
Dividing the Pie	385
<b>Equal <i>n</i>'s Requirement</b>	<b>386</b>
<b>Looking at Graphs: An Intuitive View of What's Happening</b>	<b>387</b>
More Examples of $2 \times 2$ Designs	388
More Than Two Levels	389
<b>Higher Order ANOVA</b>	<b>390</b>
Analysis of a Three-Way ANOVA	391
Higher Still	393
<b>Summary</b>	<b>394</b>
<b>Problems</b>	<b>395</b>
<b>13 WITHIN-SUBJECTS (OR REPEATED-MEASURES) DESIGNS</b>	<b>402</b>
<b>Sleep Deprivation and Problem-Solving Time</b>	<b>403</b>
Hypothetical Results: Between Subjects	403
A Within-Subjects Design	404
A Concrete Example	406
Analysis of Within-Subjects Design as Two-Factor Design	409
Summary Table	410
<b>Confidence Intervals in a Within-Subjects Design</b>	<b>411</b>
<b>Multiple Observations per Subject per Condition</b>	<b>413</b>
Sums of Squares	413
Summary Table	415
<b>Expected Mean Squares</b>	<b>418</b>
Different Sources of Variance	418
Expected Mean Squares as Part of Summary Table	420
<b>Fixed Versus Random Effects</b>	<b>421</b>
Headache Relief	421
Other Random Effects	422
<b>Higher Order Designs</b>	<b>423</b>
Analysis of This Kind of Design	423
Still Higher	423
More Complicated Designs	423
<b>Summary</b>	<b>425</b>
<b>Digression</b>	<b>426</b>
13-1 Rationale Behind Within-Subjects Confidence Intervals	426
<b>Problems</b>	<b>429</b>

<b>14 CORRELATION, PREDICTION, AND LINEAR RELATIONSHIPS 435</b>	
<b>The Concept of Prediction</b>	436
Prediction and Conditional Probability	437
Independence and Null Hypothesis	438
<b>Correlational Versus Experimental Studies</b>	438
An Experimental Study	439
A Correlational Study	439
Correlation Is Not Causality	441
Other Examples of Correlated Variables	442
<b>Linear Relationships</b>	443
<b>Measures of Linear Relationships: Regression Lines and Correlation Coefficient</b>	445
Monday Night Rituals	445
Regression Line	446
How Good Is the Fit?	452
<b>Testing Significance of a Relationship</b>	458
Null Hypothesis for Correlation	458
The <i>r</i> -to- <i>t</i> Transformation	459
<b>Other Types of Relationships</b>	460
Curvilinear Correlation	461
Multiple Regression	462
<b>Regression Toward the Mean</b>	463
Predicting IQ	464
Three Other Examples	465
<b>Summary</b>	466
<b>Digressions</b>	467
14-1 Derivation of Regression Line That Will Minimize $\Sigma(Y_i - Y'_i)^2$	467
14-2 Variance, Covariance, and $r^2$	469
14-3 Prediction of <i>X</i> from <i>Y</i>	469
<b>Problems</b>	470
<b>15 AFTER OR INSTEAD OF ANOVA 474</b>	
<b>Planned and Post Hoc Comparisons</b>	475
<b>Post Hoc Tests (Unplanned Comparisons)</b>	476
Educational Techniques	477
Problems with Post hoc Tests	479
Two Types of Post Hoc Tests	480
<b>Planned Comparisons</b>	484
Political Preferences: Examples of Planned Comparisons	484
<b>Multiple Planned Comparisons</b>	490
Drug-Induced Time Distortion	490
Independence of Hypotheses	494
<b>Some Techniques for Making Up Weights</b>	499
Test for Linear Trend: Sternberg Revisited	500
Testing for Monotonic Trend	503
Choosing Weights in Two-Way Designs	504
<b>Planned Comparisons in Within-Subjects Design</b>	507

<b>Percentage of Total Variance Accounted for</b>	<b>508</b>
A Very Powerful Experiment	509
Omega Squared	512
$\omega^2$ in Other ANOVA Situations	514
$\omega^2$ and $r^2$	515
<b>Three Measures in Experimental Situation</b>	<b>515</b>
Relative Importance of These Three Measures	515
<b>Summary</b>	<b>516</b>
<b>Digressions</b>	<b>518</b>
15-1 Proof that $t^2 = F$	518
15-2 Other Types of Post Hoc Tests	520
15-3 Pearson $r^2$ Between $w_j$ 's and $M_j$ 's	520
<b>Problems</b>	<b>521</b>
<b>16 CHI-SQUARE 527</b>	
<b>A New Distribution</b>	<b>527</b>
Mathematical Properties of $\chi^2$ Distribution	528
Characteristics of $\chi^2$ Distribution	531
<b>Uses of the <math>\chi^2</math> Distribution</b>	<b>533</b>
Computerized Teaching: Testing Against an Exact Variance	533
Fitting an Exact Distribution: Are Babies Like Coins?	536
Testing for Independence in a Contingency Table	540
<b>Relationships Among Distributions</b>	<b>543</b>
<b>Summary</b>	<b>545</b>
<b>Digressions</b>	<b>546</b>
16-1 Expectation of $z^2$	546
16-2 Distribution of $\Sigma(x - M)^2/\sigma_0^2$	546
<b>Problems</b>	<b>548</b>
<b>17 NONPARAMETRIC TESTS 551</b>	
<b>Violent Assumption Violations</b>	<b>551</b>
Computer Arithmetic Revisited	552
Retreat to Nonparametrics: Mann-Whitney <i>U</i> -test	555
<b>Parametric Versus Nonparametric Tests</b>	<b>559</b>
Misguided Memory	560
<b>Which Nonparametric Test Is Appropriate?</b>	<b>564</b>
<b>More Nonparametric Tests</b>	<b>564</b>
Comparing a Set of Data to Some Specified Theoretical Distribution: Kolmogorov-Smirnov One-Sample Test	566
Comparing Two Conditions (Within-Subjects Design): Wilcoxon Test	567
Comparing Many Conditions (Within-Subjects Design): Friedman Test	569
Discovering Associations: Spearman's Rank-Difference Correlation (Rho)	570
<b>Summary</b>	<b>572</b>
<b>Digression</b>	<b>572</b>
17-1 When the $n$ 's Are Large	572
<b>Problems</b>	<b>572</b>

<b>APPENDIX A SUMMATION AND SUBSCRIPTS</b>	<b>577</b>
<b>Summation Notation</b>	<b>577</b>
Summation Notation: General	577
Other Ways of Using the Summation Sign	578
<b>Summation Notation and Subscripts</b>	<b>578</b>
A Little Algebra of Summation Signs	579
<b>APPENDIX B DERIVATION OF RAW-SCORE FORMULA FOR VARIANCE</b>	<b>581</b>
<b>APPENDIX C COUNTING RULES</b>	<b>583</b>
<b>Five Counting Rules</b>	<b>584</b>
Counting Rule 1: General Rule for Computing Numbers of Sequences	584
Counting Rule 2: A Specific Case of Counting Rule 1 That Occurs When All $k$ 's Are Equal	586
Counting Rule 3: Permutations	587
Counting Rule 4: Ordered Combinations	588
Counting Rule 5: Unordered Combinations	591
<b>Combining Counting Rules To Count Complicated Things</b>	<b>595</b>
Probability of a Full House	595
Common Birthdays	597
<b>Summary</b>	<b>598</b>
<b>APPENDIX D NOTATION FOR ANALYSIS OF VARIANCE SITUATION</b>	<b>600</b>
<b>A General Situation</b>	<b>600</b>
<b>Double Summation</b>	<b>601</b>
<b>APPENDIX E TABLES</b>	<b>603</b>
<b>BIBLIOGRAPHY</b>	<b>626</b>
<b>ANSWERS TO SELECTED PROBLEMS</b>	<b>629</b>
<b>INDEX</b>	<b>636</b>
