Preface	5	
Preface to the English edition	6	
1	Introduction	11
1.1	Thermodynamics and its method	11
1.2	Properties of state	12
1.3	Concept of a thermodynamic process	16
1.4	Ideal gas. Ideal gas laws	18
1.5	Concept of mixtures. Mixtures of ideal gases	25
1.6	Concept of heat capacity	30
2	The first law of thermodynamics	33
2.1	Heat. Joule's experiment. Equivalence of heat and work	33
2.2	Law of conservation and conversion of energy	36
2.3	Internal energy and external work	36
2.4	Mathematical statement of the first law of thermodynamics	40
2.5	Enthalpy	46
2.6	Mathematical statement of the first law of thermodynamics for processes of flow	50
3	The second law of thermodynamics	55
3.1	Cycles. Concept of thermal efficiency. Heat sources	55
3.2	Reversible and irreversible processes	59
3.3	Statements of the second law of thermodynamics	63
3.4	The Carnot cycle. Carnot's theorem	64
3.5	The thermodynamic temperature scale	74
3.6	Entropy	87
3.7	Change of entropy in irreversible processes	94
3.8	Combined mathematical statement of the first and second laws of thermodynamics	99
3.9	Entropy and thermodynamic probability	100
3.10	Reversibility and work	109

8 Contents

4	Differential equations of thermodynamics	119
4.1	Basic methods	119
4.2	Maxwell's relations	122
4.3	Partial derivatives of internal energy and enthalpy	123
4.4	Heat capacities	126
5	Equilibrium in thermodynamic systems and phase changes	129
5.1	Homogeneous and heterogeneous thermodynamic systems	129
5.2	Thermodynamic equilibrium	130
5.3	Conditions of stability and equilibrium for an isolated homogeneous system	138
5.4	Conditions for phase equilibrium	142
5.5	Phase changes	144
5.6	The Clausius-Clapeyron equation	148
5.7	Phase stability	155
5.8	Phase changes at unequal phase pressures	157
5.9	Phase changes under curved surfaces	160
6	Thermodynamic properties of substances	164
6.1	Thermal and caloric properties of solids	164
6.2	Thermal and caloric properties of liquids	176
6.3	Andrews' experiment. The critical point. Van der Waals' equation	184
6.4	Thermal and caloric properties of real gases. Equation of state for real gases	194
6.5	Thermodynamic properties of substances on the change-of-phase line. Two-phase systems	204
6.6	Properties of substance at the critical point	211
6.7	Methods of calculating the entropy of substance	214
6.8	Thermodynamic diagrams of state for substances	220
6.9	Thermodynamic properties of substance in a metastable state	224
7	Basic thermodynamic processes	229
7.1	The isochoric process	229
7.2	The isobaric process	233
7.3	The isothermal process	235
7.4	The adiabatic process	238
7.5	Polytropic processes	246
7.6	Throttling. The Joule-Thomson effect	253
7.7	Joule expansion (expansion into a vacuum)	264
7.8	Mixing	267
7.9	Compression processes	274

8	Fluid flow processes	288
8.1	Basic flow equations	288
8.2	Velocity of sound	292
8.3	Flow through convergent nozzles	297
8.4	Transonic range. The Laval nozzle	305
8.5	Adiabatic flow with friction	308
8.6	General regularities of flow. The influence inversion law	312
8.7	Adiabatic stagnation temperature	318
9	Methods to analyze the efficiency of thermopower plants	319
9.1	Cycle efficiency	319
9.2	Comparison methods for thermal efficiencies of reversible cycles	321
9.3	Method of efficiencies in the analysis of irreversible cycles	323
9.4	Entropy calculation method for the loss of availability in irreversible cycles	326
9.5	Exergy calculation method for availability losses	332
10	Gas power cycles	340
10.1	Cycles of reciprocating internal combustion engines	340
10.2	Gas-turbine cycles	353
10.3	Reaction-engine cycles	371
11	Vapour power cycles	382
11.1	The Carnot cycle	382
11.2	The Rankine cycle	385
11.3	Rankine cycle analysis allowing for irreversible losses	395
11.4	Reheat cycle	418
11.5	Regenerative cycle	421
11.6	Binary cycles	427
11.7	Thermification cycles	431
12	Cycles of direct-energy conversion systems	435
12.1	Thermoelectric generator cycle	435
12.2	The cycle of a thermionic converter	444
12.3	MHD-generator cycle	451
13	Refrigeration cycles	459
13.1	Reverse heat cycles and processes. Refrigeration installations	459

10 Contents

13.2	Air-compression refrigeration cycle	463
13.3	Vapour-compression refrigeration cycle	468
13.4	Steam-jet refrigeration cycle	476
13.5	Absorption refrigeration cycle	479
13.6	Thermoelectric refrigeration cycle	482
13.7	Heat pump. Principle of operation	486
13.8	Liquefaction of gases	488
14	Humid air	493
14.1	Basic concepts	493
14.2	<i>I-d</i> diagram for humid air	502
15	Fundamentals of chemical thermodynamics	508
15.1	Thermochemistry. Hess's law. Kirchhoff's equation	509
15.2	Chemical equilibrium and the second law of thermodynamics	515
15.3	Equilibrium constant and degree of dissociation	520
15.4	The Nernst heat theorem	534
Conclusion	538	
Bibliography	538	
Name index	540	
Subject index	542
