

TABLE OF CONTENTS

PREFACE TO THE ENGLISH EDITION	xi
PREFACE TO THE RUSSIAN EDITION	xiii
INTRODUCTION CHAPTER	1
1. The Importance of The Study of Intermolecular Interactions. The Subject and Its Specificity	1
2. Evolution of The Concepts of Intermolecular Forces: A Brief Historical Survey	4
REFERENCES	12
CHAPTER 1. MODERN QUANTUM MECHANICAL CONCEPTS OF INTERMOLECULAR INTERACTIONS: A QUALITATIVE PICTURE	13
1. Intermolecular Potentials and Classification of Interactions	13
2. Types of Intermolecular Interactions	20
2.1. Direct Electrostatic Interactions	20
General Expression	20
Multipole Moments	23
Multipole-Multipole Interactions	29
2.2. Polarization Interactions	34
Induction Interactions	34
Dispersion Interactions	37
2.3. Resonance Interactions	42
2.4. Retardation Effects in Long-Range Interactions	44
2.5. Relativistic Effects. Magnetic Interactions ...	47
2.6. Exchange Interactions. Charge Transfer	52
3. Spectroscopic and Physico-Chemical Manifestations of Intermolecular Interactions	60
3.1. Dimer Formation	60
Van der Waals Dimers	60
Excimers	66
3.2. Hydrogen Bonding	70
Classification and Properties of Hydrogen-Bonded Complexes.....	70

Nature of H-bonding	80
3.3. Interaction Between Macroscopic Bodies	84
REFERENCES	89
CHAPTER 2. CALCULATION OF INTERMOLECULAR INTERACTIONS AT	
LARGE DISTANCES	95
1. Multipole Expansion of The Interaction Energy	95
1.1. Derivation of The General Formulas for The Expansion of The Coulomb Interaction Energy Operator	95
1.2. Interaction Energy of Two Atoms in S-States ...	104
1.3. Dispersion and Induction Interactions of Molecular Systems	109
1.4. Method of Evaluation of Dispersion Constants ..	114
Ab Initio Methods	114
Semiempirical Methods	118
2. Multipole Expansion Convergence	127
2.1. Perturbation Series and Multipole Expansion ...	127
2.2. Study of The Convergence of The Multipole Expansion	132
2.3. Elimination of Divergence. Method of "Non-Decomposed" Energies	139
3. Long-Range Interactions Between Large Molecules: Calculation Approaches	144
3.1. Salem's Study of Dispersion Interaction for Two Saturated Chains	144
3.2. Method of Bond-Bond Interaction	150
3.3. Point-Charge Method	157
3.4. Dispersion Interactions of Conjugated Molecules. The London Monopole Approach	161
REFERENCES	166
CHAPTER 3. CALCULATION OF INTERMOLECULAR INTERACTIONS	
AT INTERMEDIATE- AND SHORT-RANGE DISTANCES	170
1. Perturbation Theory with Exchange	170
1.1. Ambiguity of The Exchange-Perturbation Theory Series	170
1.2. Symmetry-Adapted Perturbation Theories	173
The n-th Order of EPT	173
1.3. Methods Which Use The Standard Rayleigh- Schrödinger Perturbation Theory	200

2. Variational Methods	204
2.1. Introduction	204
2.2. Self-Consistent Field Method	206
2.3. Effect of Electron Correlation	213
2.4. Valence Bond Method: Application to Intermolecular Interactions	218
2.5. Calculations of Large Molecules: Method of Molecular Fragments and PCILO	225
3. Statistical Methods	231
3.1. Relation Between Total Energy and Electron Density	231
3.2. Application of The Statistical Method to The Evaluation of Intermolecular Potentials	234
REFERENCES	244
CHAPTER 4. NONADDITIVITY OF INTERMOLECULAR INTERACTIONS	250
1. The Manifestations of Nonadditivity Effects	250
2. Evaluation of Many-Body Interactions	255
2.1. Nonadditivity of Long-Range Forces. The Axilrod-Teller-Mutto Three-Body Dispersion Forces	255
2.2. Evaluation of Many-Body Forces at Short and Intermediate Distances via a Variational Approach	266
2.3. Nonadditivity and Atom-Atom Potential Scheme ..	274
2.4. Effect of The Chemical Bonding on The Nonadditivity of Atom-Atom Interactions	283
REFERENCES	288
CHAPTER 5. DETERMINATION OF MOLECULAR POTENTIALS FROM EXPERIMENTAL DATA	291
1. Semi-Empirical Model Potentials	291
1.1. Hard-Sphere Model Potentials	291
1.2. Lennard-Jones Potential	292
1.3. Modifications of The Lennard-Jones Potential ..	294
12-6-4 Potential	294
m-6-8 Potential	295
Kihara Potential	296
1.4. Buckingham Potential	297
1.5. Modifications of The Buckingham Potential	299

1.6.	Potentials Describing Spectroscopic	
	Properties of Diatomic Molecules	302
	Morse Potential	302
	Pöschl-Teller Potential	304
	Rydberg Potential	306
	Other Potentials for Diatomic Molecules	306
1.7.	Anisotropic Potentials	309
	Keesom Potential	309
	Stockmayer Potential	310
	Rare Gas Atom-Linear Molecule Interaction	
	Potential	310
	Water-Water Interaction Potentials	313
1.8.	Screened Coulomb Potential	318
1.9.	Born-Mayer Potential	321
1.10.	Boys-Shavitt Multi-Parameter Potential	321
1.11.	Combined Potentials	323
	Erginsoy-Vineyard-Englert Potential	323
	ESMSV- and MSV-Potentials	324
2.	Determination of Parameters in Empirical Potentials...	326
2.1.	Fitting Procedure	326
2.2.	Macroscopic Properties as Source of Information	
	About Intermolecular Potentials	331
	Gases	331
	Condensed Phase	335
2.3.	Scattering of Molecular Beams	341
3.	Reconstruction of a Potential on The Basis of	
	Experimental Data	348
3.1.	Rydberg-Klein-Rees Method	348
3.2.	Inverse Scattering Problem	351
	General Statement of The Problem	351
	Quasiclassical Treatment. Firsov Approach	354
3.3.	Reconstructing Potential From Thermophysical	
	Data	359
	REFERENCES	364
	APPENDIX I. TABLES	371
	Table AI.1. Basic Physical Constants	371
	Table AI.2. Atomic Unit System	372
	Table AI.3. Conversion Table of Energy Units	373

APPENDIX II. BASIC PRINCIPLES OF QUANTUM THEORY OF	
MANY-ELECTRON SYSTEMS	374
1. Adiabatic Approximation	374
2. Self-Consistent Field Method. Electron Correlation	
Effects	379
3. Perturbation Theory	387
3.1. The Brillouin-Wigner and Rayleigh-Schrödinger	
Formalisms	387
3.2. Variational Perturbation Theory	394
3.3. Asymptotic Expansions. Padé Approximants	398
3.4. Polarizability of Many-Electron Systems	402
REFERENCES	410
