

Contents

1. Rheology : the Science of Deformation and Flow	1
1.1. <i>Introduction</i> , 1. 1.2. <i>Continuum and molecular mechanics</i> , 3. 1.3. <i>Fundamental concepts of rheology</i> , 5. 1.4. <i>The motion of a continuum</i> , 9. 1.5. <i>An elementary example</i> , 16. 1.6. <i>Rheological phenomena</i> , 24.	
2. Kinematics of Deformation and Flow	30
2.1. <i>Introduction</i> , 30. 2.2. <i>Principles of invariance</i> , 31. 2.3. <i>Convected coordinate systems—the time-dependent metric</i> , 33. 2.4. <i>General definitions of strain, rate of strain, etc.</i> , 35. 2.5. <i>Displacement and velocity</i> , 37. 2.6. <i>Convected differentiation with respect to time</i> , 39. 2.7. <i>Addition of quantities associated with different instants of time—finite strain tensor</i> , 44. 2.8. <i>Convected integration with respect to time-example: Boltzmann's principle of superposition</i> , 47.	
3. Dynamics of Continuous Media	50
3.1. <i>Introduction</i> , 50. 3.2. <i>The stress tensor</i> , 50. 3.3. <i>The scalar of pressure and the shear tensor</i> , 53. 3.4. <i>Further remarks concerning the pressure</i> , 54. 3.5. <i>The flux tensors, concentrations, and generation</i>	

3. Dynamics of Continuous Media—Continued

rates, 54. 3.6. The conservation equations (the “equations of change”), 57. 3.7. The equation of mechanical energy and the dissipation function, 61. 3.8. Summary of conservation equations, 62.

4. Purely Viscous Substances

64

4.1. Introduction, 64. 4.2. Homogeneity and isotropy, 66. 4.3. Stokes’ hypothesis: the general case, 68. 4.4. The Newtonian fluid, 71. 4.5. The role of vorticity, 74. 4.6. Poiseuille and Couette flow of Stokesian fluids, 75. 4.7. Secondary flow in Stokesian fluids, 82. 4.8. Empirical models of non-Newtonian fluid behavior, 85. 4.9. Variational principles for non-Newtonian fluid flow, 89.

5. Purely Elastic Substances

98

5.1. Introduction, 98. 5.2. The strain energy function, 99. 5.3. Stress-strain relations for isotropic bodies, 101. 5.4. Examples, 103. 5.5. Hypoelasticity; examples, 109.

6. Viscoelastic Substances: Linear Theory

118

6.1. Introduction, 118. 6.2. Viscoelastic phenomena, 119. 6.3. Relaxation theory of viscoelasticity, 122. 6.4. Operator equation of state—analogies to mechanical models, 125. 6.5. The relaxation test, 128. 6.6. The creep test, 132. 6.7. Examples, 133. 6.8. Viscoelastic effects in “classical” substances, 149.

7. Viscoelastic Substances: Nonlinear Theory

125

7.1. Introduction, 152. 7.2. Oldroyd’s generalization of the linear theory, 153. 7.3. Theory of Rivlin and Ericksen, 158. 7.4. Laminar shear flows, 160. 7.5. Helical flow of a viscoelastic fluid, 165. 7.6. Normal stresses in nonlinear viscoelasticity, 168. 7.7. Other theories of nonlinear viscoelasticity, 172.

8. Plastic Substances

175

8.1. Introduction, 175. 8.2. Oldroyd’s generalization of Bingham’s equation, 179. 8.3. Example—plastic flow in annuli, 180. 8.4. A different theory of plasticity, 184.

9. Viscometry and Rheogoniometry	189
<i>9.1. Introduction, 189. 9.2. The capillary tube instrument, 190. 9.3. The Couette instrument, 200. 9.4. The cone-and-plate instrument, 207. 9.5. Jets and other devices, 214.</i>	
10. Some Engineering Applications	223
<i>10.1. Introduction, 223. 10.2. Interface transfer coefficients and driving forces, 224. 10.3. Transition and turbulent flow of non-Newtonian fluids, 229. 10.4. Viscous heating in Poiseuille flow, 233. 10.5. Graetz-Nusselt problem for non-Newtonian flow in a pipe, 239. 10.6. Boundary layer theories, 242. 10.7. Heat transfer from a flat plate, 250. 10.8. Properties of non-Newtonian fluids, 253.</i>	
Appendix A. Tensor Analysis	256
<i>A.1. Notation and conventions, 256. A.2. Addition, multiplication, and contraction of systems, 258. A.3. Definition of a tensor; quotient law, 260. A.4. Curvilinear coordinates; the metric tensor, 265. A.5. Tensor differentiation of tensors; the Christoffel symbols, 270. A.6. Some useful results; illustrations, 279. A.7. Integral relations, 281.</i>	
Appendix B. Tensor Notation and Gibbs Dyadic Notation	284
Appendix C. Calculus of Variations	288
Appendix D. Time Derivatives ; Comparison of Notation	292
Questions and Problems	297
Bibliography	314
Index	315
