<i>Preface</i>	v
<i>List of Contributors</i>	xi
Chapter 1 Cure and Properties of Thermosetting Polymers . .	1
J. K. GILLHAM	
1 The Time-Temperature-Transformation Cure Diagram and Properties of Thermosetting Systems	1
2 Torsional Braid Analysis/Torsion Pendulum: A Technique for Characterizing Thermosetting Systems	6
3 Rubber-Modified Epoxies: Cure, Transitions, Morphology and Mechanical Properties	12
3.1 Introduction	12
3.2 Materials	14
3.3 Torsional braid analysis (TBA) and the TTT cure diagram	16
3.4 Phase-separated versus dissolved rubber	18
3.5 Shear modulus versus temperature	22
3.6 Fracture behavior	23
4 Conclusions	26
Acknowledgement	26
References	27
Chapter 2 Acrylic-Based Adhesives	29
F. R. MARTIN	
1 Introduction	29
2 Chemistry of Acrylics	30

2.1	Cyanoacrylates	31
2.2	Methacrylates and acrylates	32
3	Adhesives—Developments	33
3.1	Cyanoacrylates	34
3.2	Anaerobics	39
3.3	Modified acrylic adhesives	41
4	Conclusion	52
	References	53
Chapter 3 Epoxy-Based Adhesives		57
E. W. GARNISH		
1	Introduction	57
2	Resins	57
3	Hardeners	60
3.1	Amine-based hardeners	60
3.2	Latent hardeners	63
3.3	Miscellaneous hardeners	65
4	Co-Reacting Compositions	67
5	Morphology	68
6	Modifying Constituents	69
7	Concluding Remarks	71
	References	72
Chapter 4 Bismaleimide Resins		77
H. STENZENBERGER		
1	Introduction	77
2	Synthesis of Bismaleimides	78
2.1	Difunctional monomaleimides (AB monomers)	81
3	Reactivity of Bismaleimides	82
3.1	Thermal homopolymerization	84
3.2	Radical-type homo- and copolymerization	84
3.3	Ionic-type homo- and copolymerization	87
3.4	Diene-type copolymerization	90
3.5	'Ene'-type linear chain extension copolymerization	91
3.6	Michael Addition copolymerization	92
3.7	Other co-monomers	95
4	Commercial Bismaleimides and Bismaleimide Resins	95
4.1	Compimide 353	96
4.2	Michael Addition resins	96
4.3	The XU 292 resin concept	105
4.4	The bismaleimide/cyanate resin concept	106
5	Commercial Prepreg Systems	109
6	Adhesives Based on Bismaleimide Resins	116
6.1	New toughened bismaleimide adhesives	119
7	Future Bismaleimide Development Requirements	123
	References	123

Chapter 5 Rubber-Toughened Thermosetting Polymers 127**A. J. KINLOCH**

	Notation	127
1	Introduction	127
2	Chemistry/Microstructure Relationships	131
	2.1 Introduction	131
	2.2 Chemical and physical properties of the rubber	131
	2.3 Chemical and physical properties of resin/hardener	138
	2.4 Time and temperature of cure	140
3	Microstructure/Mechanical Property Relationships	141
	3.1 Introduction	141
	3.2 Toughening mechanisms	142
	3.3 Microstructural features of the matrix phase	150
	3.4 Microstructural features of the rubbery phase	155
4	Concluding Remarks	160
	Acknowledgements	160
	References	161

Chapter 6 Rigid-Particulate Reinforced Thermosetting Polymers 163**R. J. YOUNG**

	Notation	163
1	Introduction	164
2	Structure	165
	2.1 Fabrication	165
	2.2 Characterisation	165
3	Deformation	168
	3.1 Elastic deformation	168
	3.2 Plastic deformation	171
4	Fracture	173
	4.1 Fracture strength	173
	4.2 Impact, fatigue and time-dependent failure	175
5	Crack Propagation	177
	5.1 Particle volume fraction and size	179
	5.2 Particle/matrix adhesion	180
	5.3 Matrix toughness	182
	5.4 Rate and temperature	184
6	Toughening Mechanisms	185
	6.1 Crack pinning	185
	6.2 Analysis of pinning	188
	6.3 Crack opening displacement	192
	6.4 Localised plastic deformation	194
7	Concluding Remarks	198
	Acknowledgements	198
	References	198

Chapter 7 Microstructure in Crosslinked Epoxy Polymers . . . 201
G. C. STEVENS

	Notation	201
1	Introduction	202
2	Networks Formation	203
2.1	Typical materials and reaction mechanisms	203
2.2	Ideal and non-ideal networks	210
2.3	Observed reaction behaviour	213
2.4	Uneven curing	220
3	Bulk microstructure	221
3.1	Microstructure in linear amorphous polymers	222
3.2	Scattering observations of inhomogeneity	222
3.3	Microscopy of bulk and surface structure	245
4	Relationships Between Physical Properties and Microstructure	251
4.1	Correlations during reaction	251
4.2	Influence on mechanical properties	255
4.3	Other properties and considerations	260
5	Concluding Remarks	260
	Acknowledgements	263
	References	263

Chapter 8 Silane Coupling Agents 269
J. COMYN

1	Introduction	269
2	Improvements in Bonding with Coupling Agents	273
3	Interaction of Silanes with Glass and Related Materials	275
4	Interaction of Silanes with Metals	288
5	Interactions of Functional Groups with Polymers and Resins	303
6	Titanate and Zirconate Coupling Agents	306
7	Concluding Remarks	308
	References	309
