<i>Preface</i>	v
<i>Recommendations from the Participants for Future Research in the EEC R&D Programme, DG XII</i>	vii
I. PRESENTATIONS BY EC CONTRACTORS	
Electrochemical reduction of CO ₂ by binuclear Co and Ni complexes <i>A. Mackor, T. P. M. Koster, J. P. Collin, A. Jouaiti and J. P. Sauvage</i>	1
Microsecond and nanosecond kinetics of isolated Photosystem 2 reaction centres studied by single photon counting and transient absorption <i>L. B. Giorgi, B. Crystall, P. J. Booth, J. R. Durrant, D. R. Klug, J. Barber and G. Porter</i>	11
Electron transfer in the Photosystem-I reaction center: evidence for a double reduction of A1 <i>P. Sétif, H. Bottin and P. Mathis</i>	21
Immobilized photosynthetic systems for conversion of light energy to chemical and electrical energies <i>D. O. Hall, K. K. Rao, D.-J. Shi, M. Grätzel, N. Vlachopoulos, M. C. W. Evans and M. Seibert</i>	28
II. PHOTOCHEMISTRY	
Ru(II)-polypyridine complexes as photosensitizers and/or building blocks for the design of molecular devices <i>F. Barigelletti, L. De Cola, V. Balzani, P. Belser, A. von Zelewsky, F. Ebmeyer and F. Vögtle</i>	46
Photochemically induced structural changes in multilayers and columnar systems <i>L. Häussling, C. Mertesdorf and H. Ringsdorf</i>	53

Intramolecular energy transfer in polynuclear transition metal complexes <i>C. Chiorboli, C. A. Bignozzi, L. Checchi, M. T. Indelli, M. A. Rampi and F. Scandola</i>	57
Photochemical control of phase transitions and chromatic effects in liquid crystal polymers <i>I. Cabrera, M. Engel and H. Ringsdorf</i>	68
Building bridges for rapid intramolecular electron transfer processes <i>M. N. Paddon-Row, A. M. Oliver, M. C. R. Symons, E. Cotsaris, S. S. Wong and J. W. Verhoeven</i>	79
Efficient photoinduced intramolecular energy transfer in an oblique bis-porphyrin system <i>S. Chardon-Noblat, J. Guilhem, P. Mathis, C. Pascard and J. P. Sauvage</i>	90
Electron- and energy transfer across rigid, saturated hydrocarbon bridges: molecular engineering of the bridge configuration <i>J. W. Verhoeven, J. Kroon, M. N. Paddon-Row and A. M. Oliver</i>	100
A tungsten dithiolene as catalyst and photocatalyst <i>E. Vrachnou, C. Mitsopoulou, D. Katakis and J. Konstantatos</i>	109

III. PHOTOELECTROCHEMISTRY

Artificial photosynthesis: very efficient visible light energy harvesting and conversion by spectral sensitization of fractal oxide semiconductor films (<i>Abstract</i>). <i>M. Grätzel</i>	116
Characterization of the illuminated GaAs/electrolyte interface by means of ellipsometric measurements. <i>S. Lingier and W. P. Gomes</i>	118
Application of the quasi-Fermi level concept in studies of the photo-stability of semiconductor electrodes <i>R. Reineke and R. Memming</i>	129
Kinetic model for water photooxidation and competitive reactions at <i>n</i> -TiO ₂ electrodes on the basis of RRDE, PT and EER experiments <i>D. Tafalla and P. Salvador</i>	139
Electrochemical properties of ruthenium oxides and some photo-induced electron transfer reactions in perfluorinated (Nafion) ionomers <i>G. Binh Cirlot, J. M. Kelly, M. E. G. Lyons and D. E. McCormack</i>	151

IV. PHOTOBIOLOGY

The structure and composition of the thylakoid membrane <i>D. J. Simpson and D. von Wettstein</i>	160
Isolation of the photosystem two reaction centre: a step forward in understanding how photosynthetic organisms split water <i>J. Barber</i>	172
The role of Ca^{2+} in Photosystem II <i>A. Boussac and A. W. Rutherford</i>	185
Properties of the Photosystem 2 quinone binding region. <i>J. H. A. Nugent, A. R. Corrie, J. A. M. Hubbard, S. J. Bowden, C. Demetriou, C. J. Lockett and M. C. W. Evans</i>	190
Towards an understanding of the physiological role of state transitions. . <i>F.-A. Wollman and L. Bulté</i>	198
Unadjustments between primary and secondary electron transfer in photosynthesis. <i>J. M. Ramirez and P. J. Aparicio</i>	208
Transduction of redox energy into acid-base energy by cytochrome b-559 at the coupling site between PS II and PS I in noncyclic photophosphorylation <i>M. Losada, M. Hervás and J. M. Ortega</i>	218
Three-dimensional structure of spinach Rubisco, a key enzyme in photosynthesis and photorespiration <i>I. Andersson, S. Knight and C.-I. Brändén</i>	229
Effects of divalent metal chelators on the photosynthetic activity of intact and permeabilized <i>Anacystis</i> <i>G. C. Papageorgiou and T. Lagoyanni</i>	239
Effect of irradiance on productivity and pigment composition of nitrogen- fixing blue-green algae <i>M. G. Guerrero, H. Rodríguez, J. Moreno, J. Rivas, M. A. Vargas, A. G. Fontes and M. Losada</i>	248
Use of the photosynthetic bacterium, <i>Rhodobacter capsulatus</i> , for the treatment of waste waters from food industry <i>T. Lissolo, G. Lenon, A. Bernard and P. M. Vignais</i>	258

Solar generation of inorganic energy sources of chemoautotrophic bacteria for biomass production	263
<i>H. Tributsch</i>	
Bacterial hydrogenases from sulfate reducing bacteria: an as yet unexplored field for protein design and molecular modeling	275
<i>J. J. G. Moura, M. Teixeira and I. Moura</i>	
On the mechanism of electron transfer between proteins and glassy carbon	286
<i>W. R. Hagen</i>	
<i>List of Participants</i>	299
