Prefacev

INTRODUCTION 1

Part 1 Structure Design Basis for Wind Turbine Blade

Chapter 1 BASIC PRINCIPLES 9

 1.1 DESIGN COORDINATION 9

 1.2 DESIGN BASIS 12

 1.3 STRUCTURE DESIGN 13

 1.4 STRUCTURE WEIGHT AND COST CONTROL 15

Chapter 2 COMPOSITE BASIS 17

 2.1 BLADE COMPOSITE STRUCTURE COMPONENTS 21

 2.2 BLADE STRUCTURAL MATERIAL 25

 2.3 REINFORCED FIBRE 25

 2.4 RESIN 27

 2.5 OTHER STRUCTURAL MATERIALS 28

 2.6 MATERIAL SELECTION 30

 2.7 MECHANICAL TEST OF COMPOSITES 30

 2.7.1 Testing Techniques of Composites 30

 2.7.2 Test Process of Composites 34

 2.8 MANUFACTURABILITY OF COMPOSITES FOR BLADE 36

Chapter 3 STRUCTURE DESIGN BASIS 43

 3.1 DESIGN BASIS 43

 3.1.1 Airfoil Contour 43

 3.1.2 Load Characteristics 45

 3.1.3 Load-carrying Forms 57

 3.2 CONFIGURATION DESIGN 59

3.3	STRUCTURE DESIGN PROCESS	61
-----	--------------------------	----

Part 2 Structure Design for Wind Turbine Blade

Chapter 4	STRUCTURAL COMPONENT DESIGN	67
4.1	SPAR CAP DESIGN	67
4.1.1	Configuration Categories for Spar Cap	70
4.1.2	Spar Cap of Glass-fibre Fabric	72
4.1.3	Spar Cap of Carbon-fibre Fabric	74
4.1.4	Spar Cap of Laminated Bamboo-wood	76
4.1.5	Spar Caps Made of Mixed Material	78
4.1.6	Structure Design for Spar Caps	78
4.1.7	Spar Cap Manufacturing Process Description	79
4.2	DESIGN OF WEB AND FLANGE ADHESIVE BONDING	83
4.2.1	Web Configuration Types	84
4.2.2	Web Arrangements	88
4.2.3	Web Structure Design	89
4.2.4	Prospect of Web Processing	96
4.3	SKIN DESIGN	96
4.3.1	Configuration Design for Skin	97
4.3.2	Summary of Skin Process	98
4.4	SANDWICH STRUCTURE DESIGN	99
4.4.1	Sandwich Structure Configurations	101
4.4.2	Sandwich Structure Design	101
4.4.3	Summary of Sandwich Structure Processes	104
4.5	LEADING EDGE UD DESIGN AND LEADING EDGE ADHESIVE BONDING	105
4.5.1	Structure Design for Leading edge UD	106
4.5.2	Adhesive Bonding Forms	108
4.6	TRAILING EDGE UD DESIGN AND TRAILING EDGE ADHESIVE BONDING	108
4.6.1	Design for Trailing Edge UD Configuration	109
4.6.2	Structure Design for Trailing Edge	111
4.6.3	Summary of Trailing Edge Processing	119

4.7	ROOT REINFORCEMENT DESIGN	121
4.7.1	Structure Design for Root Reinforcement	121
4.7.2	Process Overview of Blade Root Reinforcing Layer	122
4.8	CONNECTION DESIGN OF BLADE ROOT	123
4.8.1	Different Method for Mounting Bolt	124
4.8.2	Configuration Design of Embedded Bolts	126
4.8.3	Structure Design for Embedded Bolts	130
4.8.4	Structure Design for T-bolt	137
4.8.5	Overview of Blade Root Process Test	138
4.9	DISCUSSION ABOUT OPTIMIZATION DESIGN	138
4.9.1	Influence of Optimization and Non-optimization	138
4.9.2	Structure Index	138
Chapter 5	DESIGN OF FUNCTIONAL PARTS	140
5.1	BLADE TIP DESIGN	140
5.2	LIGHTNING PROTECTION DESIGN	140
5.2.1	Air-termination System	142
5.2.2	Lightning Protection Tests on Blades	143
5.3	GEL COATS AND PAINTS	144
5.4	DESIGN OF REINFORCED LAYERS FOR TRANSPORTATION	145
5.5	BLADE ROOT COVER DESIGN	145
5.6	DESIGN OF BALANCING CHAMBERS	146
5.7	RAIN DEFLECTOR DESIGN	146
5.8	PE PIPES CONNECTED WITH DOUBLE WEBS	147
5.9	OTHER DESIGNS	147
Part 3	Structure Design Methods for Wind Turbine Blade	
Chapter 6	STRUCTURE VERIFICATION PRINCIPLES	151
6.1	GENERAL PRINCIPLES OF STRUCTURE VERIFICATION	152
6.2	BLADE STRUCTURE VERIFICATION METHODS	152
6.3	GENERAL INTRODUCTION OF BLADE STRUCTURE VERIFICATION	154
6.3.1	Blade Topological Graph	154

6.3.2	Stress Characteristics of Blade Components	154
6.4	STRENGTH ANALYSIS	157
6.5	STABILITY ANALYSIS	157
6.6	DEFORMATION ANALYSIS	161
6.7	DYNAMIC CHARACTERISTIC ANALYSIS	162
6.8	ADHESIVE BONDING ANALYSIS	162
6.9	INTERLAMINAR ANALYSIS	162
6.10	FATIGUE ANALYSIS	163
6.11	ADVANCED ANALYSIS	164
Chapter 7	UNIDIMENSIONAL METHOD	165
7.1	I-BEAM THEORY	165
7.2	SIMPLIFICATION OF BLADE CROSS SECTION MODEL	168
7.3	CALCULATION OF BLADE CROSS SECTION STRENGTH	171
7.4	STRENGTH ANALYSIS OF BLADE CROSS SECTION	174
7.5	CALCULATION OF BLADE BENDING DEFORMATION	175
7.6	DEFLECTION ANALYSIS OF BLADE SECTION	177
7.7	DEVIATION ANALYSIS WITH UNIDIMENSIONAL METHOD	177
7.8	APPLICATION DEVELOPMENT OF UNIDIMENSIONAL METHOD	181
Chapter 8	2D METHOD	183
8.1	BLADE STRENGTH CALCULATION	184
8.1.1	Normal Stress Calculation of Thin-walled Airfoil Structure	184
8.1.2	Shear Stress Calculation of Thin-walled Airfoil	190
8.1.3	Calculation of Blade Deflection	197
8.2	CALCULATION OF BLADE NATURAL FREQUENCY AND CHARACTERISTIC MODE	201
8.3	EQUIVALENT FATIGUE LOAD METHOD FOR FATIGUE DAMAGE CALCULATION	203
8.4	2D ENGINEERING ALGORITHM	204
8.5	FINITE ELEMENT METHOD OF 2D UNIFORM CROSS SECTION	206
8.5.1	Finite element analysis of 2D shell model	206
8.5.2	Finite element verification of 2D solid model	209

Chapter 9	3D METHOD	211
9.1	FINITE ELEMENT ANALYSIS OF WIND TURBINE BLADES	212
9.2	FINITE ELEMENT MODELING OF BLADES	212
9.2.1	Geometrical Shape	213
9.2.2	The Coordinate System	214
9.2.3	Structural Configuration	216
9.2.4	Meshing	216
9.2.5	Element Normal and Element Coordinate System	218
9.2.6	Material Properties	219
9.2.7	Direction of Material	220
9.2.8	Spanwise Divisions	220
9.2.9	Element Properties	220
9.2.10	Mass of a Blade	222
9.3	LOCAL REFINEMENT OF BLADE FINITE ELEMENT MODEL	223
9.3.1	Refinement of TE Model	223
9.3.2	Adhesive Bonding of Web Flange and Shell	224
9.3.3	Blade Root Model	224
9.3.4	Adjacent Component of Root Model	225
9.3.5	Point Mass of Blade	225
9.4	FINITE ELEMENT BOUNDARY AND LOADING OF BLADE	226
9.4.1	Finite Element Boundary Conditions	226
9.4.2	Ultimate Loading Form in Blade FEA	226
9.4.3	Ultimate Envelop Load	227
9.4.4	Concentrated Force Ultimate Loading	230
9.4.5	Distributed Ultimate Loading	231
9.4.6	Loading Type of Test Load	240
9.4.7	Gravitational Load	243
9.4.8	Fatigue Load	243
Chapter 10	OTHER METHODS	244
10.1	PROCEDURE OF BLADE MOULDING	244
10.2	BLADE DATABASE	244

Part 4 Structure Component Design Methods for Wind Turbine Blade

Chapter 11 BASIC VERIFICATION ANALYSIS 249

 11.1 BASIC VERIFICATION OF BLADE 249

 11.2 SAFETY FACTOR OF STRUCTURE VERIFICATION 250

 11.2.1 Safety Factor of Structure Verification Defined in GL 2010 250

 11.2.2 Safety Factor of DNV Structure Verification 252

 11.3 STRENGTH VERIFICATION 254

 11.3.1 Failure Criterion 254

 11.3.2 Overall Ultimate Strength Verification 255

 11.3.3 Strength Verification of Hoisting Condition 256

 11.4 STIFFNESS VERIFICATION 259

 11.4.1 Criterion of Deflection Analysis 259

 11.4.2 Stiffness Distribution 260

 11.4.3 Tip Deflection 261

 11.5 ANALYSIS OF VIBRATION CHARACTERISTICS 262

 11.5.1 Natural Frequency and Mode of Vibration 262

 11.5.2 Campbell Chart of Blade Vibration 266

 11.6 OVERALL BUCKLING OF BLADE 270

Chapter 12 LAMINATE ANALYSIS 272

 12.1 THEORY OF LAMINATE 272

 12.1.1 The Theory of Shell Theory to Composite Material 273

 12.1.2 Feature of Laminate 275

 12.1.3 Performance and Stiffness of Laminate 276

 12.1.4 The Strength Analysis of Laminate 279

 12.1.5 The Design Value for Structure 280

 12.2 DESIGN OF LAMINATE 281

 12.2.1 The Stiffness Prediction and Design of Laminate 281

 12.2.2 Preliminary Design of Laminate 282

 12.2.3 Consideration of Environmental Influence 282

 12.3 BUCKLING OF THE LAMINATE 283

 12.3.1 Buckling Calculation Method 284

 12.3.2 Boundary Conditions 286

12.3.3	Examples of Theoretical Solution	286
12.3.4	Engineering Algorithm	290
12.3.5	FEM Example	292
12.3.6	FEA of Laminate	293
12.4	FIBRE FAILURE ANALYSIS	294
12.5	RESIN FAILURE ANALYSIS	296
12.6	APPLICATION OF LAMINATES ON BLADES	300
Chapter 13	ANALYSIS OF SANDWICH STRUCTURE	302
13.1	BASIS OF SANDWICH STRUCTURE	302
13.2	SANDWICH STRUCTURE DESIGN	303
13.2.1	Design Principle of Sandwich Structure	303
13.2.2	Design Key Points	304
13.3	ANALYSIS OF SANDWICH STRUCTURE	304
13.3.1	Basic Parameters	304
13.3.2	Analysis of Local Failure	305
13.4	ANALYSIS METHODS OF SANDWICH STRUCTURE	307
13.4.1	Sandwich with Isotropic Panels	307
13.4.2	Sandwich with Orthotropic Panels	315
13.4.3	Engineering Algorithm of Local Instability	316
13.4.4	Finite Element Analysis	318
13.4.5	Local Secondary Analysis Method	319
13.5	APPLICATION OF SANDWICH STRUCTURE ON BLADES	320
13.6	ANALYSIS OF WEB BUCKLING	320
13.7	ANALYSIS OF BLADE LOCAL BUCKLING	325
13.8	BUCKLING ANALYSIS OF BLADE CROSS SECTION	327
Chapter 14	ANALYSIS OF ADHESIVE BONDING	328
14.1	ADHESIVE BONDING	328
14.1.1	Adhesive Characteristics	329
14.1.2	Advantages and Disadvantages of Composite Bonding	330
14.2	DESIGN OF ADHESIVE BONDING	332
14.2.1	General Design Principles	332
14.2.2	Basic Failure Modes	332
14.2.3	Basic Bonding Methods	333
14.2.4	Selection of Geometric Parameters	334

14.2.5	Fibre Direction	336
14.2.6	Design of Bonding Detail	337
14.3	BONDING ENGINEERING ALGORITHM	338
14.3.1	Calculation of Static Strength	338
14.3.2	Durability Analysis	342
14.4	ANALYSIS OF ADHESIVE BONDING	343
14.5	ADHESIVE BONDING APPLICATION ON BLADE	345
14.5.1	Bonding between Web Flanges and Shells	346
14.5.2	Bonding of Trailing Edge	347
14.5.3	Control of Bonding Processing	348
Chapter 15	ANALYSIS OF BOLTED CONNECTION	349
15.1	STRUCTURE VERIFICATION OF BLADE ROOT WITH EMBEDDED INSERTS	350
15.1.1	Types of the Root End	350
15.1.2	Global Finite Element Analysis	354
15.1.3	Local Analysis of Contact Surface	359
15.2	STRUCTURE VERIFICATION OF T-BOLT PROCESSING	369
15.2.1	Structure Analysis Procedure	369
15.2.2	Global Finite Element Analysis	370
15.2.3	Bolt Engineering Method	372
Part 5	Special Subject for Structure Design of Wind Turbine Blade	
Chapter 16	FATIGUE ANALYSIS	377
16.1	THEORETICAL BASIS	377
16.1.1	Cyclic Load	378
16.1.2	Fatigue Lifetime	379
16.1.3	Stress ratio	379
16.1.4	S-N curve	381
16.1.5	Diagram of Fatigue Limit	381
16.2	FATIGUE OF COMPOSITES	383
16.2.1	Model of fatigue accumulated damage	384
16.2.2	Estimation Method of Fatigue Lifetime	386

16.3	VERIFICATION PROCESS OF BLADE FATIGUE	387
16.4	FATIGUE LOAD	389
16.5	SELECTION OF CRITICAL POINT OF FATIGUE	389
16.6	METHODS OF BLADE FATIGUE VERIFICATION	391
16.6.1	Coordinate System	392
16.6.2	Transformation Matrix of Stress	392
16.6.3	Equivalent Stress	393
16.6.4	Rain-flow Counting	394
16.6.5	Safety Factor of Fatigue Analysis	396
16.7	IDENTIFICATION OF BLADE FATIGUE DAMAGE	397
Chapter 17	ANALYSIS OF IMPACT RESISTANCE	
	OF BLADE	399
17.1	ANALYSIS TECHNIQUES OF IMPACT DAMAGE	400
17.1.1	Methods of Engineering Analysis	401
17.1.2	Techniques of Load Processing	402
17.2	METHODS OF EXPLICIT TIME INTEGRATION	404
17.3	CONSTITUTIVE RELATION OF MATERIAL	405
17.3.1	Material of Bird-model Impact	405
17.3.2	Material of Hail Impact	405
17.4	VERIFICATION OF RESISTANCE FOR IMPACT OF BLADE	406
17.4.1	Impact-resistance Model of Blade	407
17.4.2	Analysis of Blade Resistance for Impact	407
17.5	TEST OF BLADE RESISTANCE FOR IMPACT	408
Chapter 18	ANALYSES OF FRACTURE MECHANICS AND	
	INTER LAMINAR	409
18.1	FRACTURE ANALYSIS of COMPOSITE MATERIALS	409
18.2	MAIN PARAMETERS IN FRACTURE MECHANICS	410
18.3	FRACTURE MECHANICS CALCULATION METHOD	411
18.3.1	Theoretical Solution of a Center Cracked Finite Width Plate	411
18.3.2	The Stress Intensity Factor and Extrapolation	412
18.3.3	Domain Method J-integration and Equivalent Integration	417
18.3.4	Strain energy release rate and virtual crack method	419
18.4	DUMMY NODE FRACTURE ELEMENT	420
18.4.1	Dummy Node Fracture Element of Linear Crack	420

18.4.2	Dummy Node Fracture Element of a Plane Crack	424
18.5	INTERLAMINAR STRESS OF COMPOSITES	427
18.5.1	Shear Stress Distribution of Interlaminar Interface	430
18.5.2	Interlaminar Shear Stress Distribution Along Thickness Direction	431
18.5.3	Interlaminar Normal Stress	431
18.5.4	Distribution of Axial Displacement on the Surface of Laminates ...	432
18.6	INTERLAMINAR FAILURE AND FRACTURE FAILURE OF BLADE	433
Chapter 19	RELIABILITY ANALYSIS	434
19.1	COMPOSITES DAMAGE TOLERANCE	434
19.1.1	Overview	434
19.1.2	Three Elements of Damage Tolerance	435
19.2	RELIABILITY	437
19.2.1	Technical Basis of Reliability	438
19.2.2	Reliability Evaluation Index	439
19.2.3	Reliability Design of Structural System	440
Chapter 20	FULL-SCALE TESTING OF BLADES	442
20.1	OVERVIEW	442
20.2	MATERIAL TESTING AND COMPONENT TESTING	442
20.3	INTRODUCTION OF FULL-SCALE TESTING OF BLADES	445
20.3.1	Basic Principle and Relevant Standards	445
20.3.2	Test Items and Procedures	445
20.4	BLADE DATA AND REQUIREMENTS FOR SPECIMENS	446
20.4.1	Blade Data	446
20.4.2	Requirements for Specimens	447
20.5	TEST STAND	447
20.5.1	Loading Directions	447
20.5.2	Loading Types	448
20.5.3	Other Devices and Tooling	449
20.6	DESIGN LOAD AND TEST LOAD	452
20.7	FAILURE MODES	452
20.8	MASS AND DYNAMIC PROPERTY TESTS	453
20.9	STATIC STRENGTH TEST	454

20.10 FATIGUE TEST.....457

20.11 DESTRUCTIVE TEST.....458

Chapter 21 SUMMARY AND PROSPECT.....459

21.1 DESIGN AND PROCEDURES.....459

21.2 VERIFICATION AND EXPERIENCE.....461

21.3 HORIZONS BEYOND DESIGN AND VERIFICATION.....462

21.4 PROSPECTS FOR THE FUTURE.....463

21.5 BACK TO THE ORIGIN-STRUCTURAL MECHANICS OF
COMPOSITE THIN-WALLED BARS.....468

REFERENCES.....470

Appendix A COORDINATE SYSTEM.....472

Appendix B BLADE WB45.3.....475

INDEX.....477
