Preface	vii
 PART I	
Thermodynamics of batch consolidation of heterogeneous suspensions in frictionless vessel	3
1 Kinematics	3
1.1 Introduction	3
1.2 Motion. Deformation gradients and their rates	9
2 Mass balance	16
2.1 Mass balance for arbitrary layer	16
2.2 Local properties of the batch consolidation process following from the mass balance	22
2.3 Global properties of the batch consolidation process following from the mass balance	33
2.4 Kinematic estimations	37
3 Balance of momentum and its implications	47
3.1 Balance of momentum for arbitrary layer	47
3.2 Potential and kinetic energy of arbitrary layer	57
3.3 Some general properties of gravitational consolidation following from equilibrium equations	68
3.4 Centrifugal consolidation	71
4 Balance of energy	77
4.1 Balance of energy for arbitrary layer	77
4.2 Incompressible flocculated suspensions	85
4.3 Some general properties of quasistatic batch consolidation following from the balance of energy	88

5	Entropy inequalities and phenomenological relations	92
5.1	Entropy inequalities and intrinsic thermal equilibrium . . .	92
5.2	Thermostatic properties of ideally dissipative constituents .	95
5.3	Thermodynamical forces and rates (fluxes)	97
5.4	Heat conduction. Equation for temperature	99
6	Foundations of mechanics of quasistatic batch consolidation	102
6.1	Introduction	102
6.2	Basic principle of constitutive modeling	105
6.3	Flow rule of porous solid structure and its implications . . .	106
6.4	Consolidation condition	118
6.5	Solution for R -suspension. Steady state	121
6.6	Overall dissipation of mechanical energy in course of consolidation process	132
6.7	Law of viscous resistance – Darcy law	138
6.8	Summary: free-boundary problem of batch consolidation . .	144
	APPENDIX I	147
AI.1	Symbolic balance equation for porous components	147
AI.2	Fundamental identity. Derivation of symbolic balance equation for mixture	149
AI.3	Other mathematical formulas	154
	List of symbols used in Part I	158
	PART II	
	Consolidating suspension as inhomogeneous two-phase thermodynamical system	
	<i>Kinematics and balance equations</i>	163
7	Kinematics	165
7.1	Basic geometrical relationships. Mass distribution	165
7.2	Basic kinematical relationships	175

8 Balance laws	194
8.1 Symbolic form of balance law. Mass balance	194
8.2 Balance of momentum	196
8.3 Conclusions following from the balance of momentum . . .	206
8.4 Balance of energy	218
8.5 Clausius-Duhem inequality	230
 APPENDIX II	 236
