Preface	ix
Introduction	1
References	5
Chapter 1	
Concepts, definitions, conventions, and notation	7
1.1. Classification of reactions	7
1.2. Steps, pathways, networks, and cycles	8
1.3. Rates	10
1.4. Rate equations and activation energies	11
1.5. Orders, molecularities, and ranks	12
1.6. Conversion, yield, and selectivity	12
Summary	15
References	16
Chapter 2	
Fundamentals	17
2.1. Statistical basis: molecularities and reaction orders	17
2.2. Nonideality	20
2.3. Temperature dependence	21
2.4. Compilation of rate equations of multistep reactions	23
2.5. Consistency criteria	26
2.5.1. Thermodynamic consistency	26
2.5.2. Microscopic reversibility	27
Summary	31
References	31
Chapter 3	
Determination of rates, orders, and rate coefficients	33
3.1. Research reactors	33
3.1.1. Batch reactors	33
3.1.2. Continuous stirred-tank reactors	37
3.1.3. Tubular reactors	38
3.1.4. Differential reactors	39
3.1.5. Reactors for fast reactions	41
3.2. Analytical support	43
3.3. Reaction orders and apparent rate coefficients	44
3.3.1. Irreversible reactions with single reactant	45
3.3.2. Irreversible reactions with two or more reactants	49
3.3.3. Reversible reactions	51
3.3.4. Gas-phase reactions at constant pressure	52
3.4. Numerical work-up, error recognition, and reliability	53
Summary	58
References	59

Chapter 4

Tools for reduction of complexity	63
4.1. Rate-controlling steps	63
4.1.1. Pathways of irreversible steps	64
4.1.2. Pathways with reversible steps	66
4.2. Quasi-equilibrium steps	69
4.3. Quasi-stationary states: the Bodenstein approximation	72
4.4. Relative abundance of species in catalysis and polymerization and long-chain approximation	77
Summary	78
References	78

Chapter 5

Elementary step combinations	81
5.1. Reversible reactions	81
5.1.1. First order-first order reactions	82
5.1.2. First order-second order reactions	86
5.1.3. Second order-second order and higher-order reactions	86
5.2. Parallel steps	87
5.2.1. Parallel first-order steps	87
5.2.2. Parallel second-order steps	91
5.2.3. Parallel steps of different orders	92
5.3. Coupled parallel steps	95
5.4. Sequential steps	104
5.4.1. Sequential first-order steps	104
5.4.2. Sequential steps of other orders	109
5.5. Competing steps	110
5.6. Reactions with fast pre-dissociation	111
5.7. General solution for first-order networks	113
Summary	116
References	117

Chapter 6

Practical mathematics of multistep reactions	119
6.1. Simple and non-simple pathways and networks	119
6.2. Pseudo-first order rate coefficients	120
6.3. General formula for simple pathways	121
6.4. Simple networks	131
6.4.1. Network reduction	131
6.4.2. Rate equations	133
6.4.3. Yield-ratio equations	139
6.5. Non-simple pathways and networks	141
Summary	144
References	145

Chapter 7

Network elucidation	149
7.1. Order and rank	150
7.1.1. Reaction orders	150
7.1.2. Ranks and Delplot	151
7.2. "One plus" rate equations	156
7.2.1. Types of one-plus rate equations	157
7.2.2. Establishment of one-plus rate equations from experimental data	158
7.3. Relationships between network properties and kinetic behavior	163
7.3.1. Simple pathways	164
7.3.2. Simple networks	175
7.3.3. Non-simple pathways and networks	179
7.4. Other criteria and guidelines	182
7.5. Auxiliary techniques	187
Summary	190
References	192

Chapter 8

Homogeneous catalysis	195
8.1. Single-species catalysis	196
8.2. Complex catalysis	200
8.2.1. Acid-base catalysis	200
8.2.2. Catalysis by metal complexes	203
8.3. Classical models of enzyme kinetics	206
8.3.1. Michaelis-Menten kinetics	207
8.3.2. Briggs-Haldane kinetics	209
8.3.3. Reversible cycles	209
8.3.4. Common features and plots	210
8.4. General formula for single catalytic cycles: Christiansen mathematics	213
8.5. Reduction of complexity	215
8.5.1. Relative abundance of catalyst-containing species	216
8.5.2. Rate-controlling step	218
8.5.3. Quasi-equilibrium steps	219
8.5.4. Irreversible steps	221
8.5.5. Combinations of approximations	222
8.6. Relationships between pathway properties and kinetic behavior	225
8.7. Cycles with external reactions	229
8.7.1. Ligand-deficient catalysts	230
8.7.2. Inhibition, activation, decay, and poisoning	235
8.8. Multiple cycles	239
8.8.1. Competing reactions (cycles with common members)	239
8.8.2. Dual- and multiple-form catalysts (connected cycles)	242
8.8.3. Reactions with multiple products (cycles with common pathway segments)	245

8.9. Self-accelerating reactions (autocatalysis)	251
8.9.1. Product-promoted reactions	251
8.9.2. Reactant-inhibited reactions	252
8.10. Analogies to heterogeneous catalysis	253
Summary	255
References	257
Chapter 9	
Chain reactions	261
9.1. General properties	261
9.2. Initiation	262
9.3. Reactions with two chain carriers: the hydrogen-bromide reaction	263
9.4. Identification of relevant steps	268
9.5. Transmission of reactivity: indirect initiation, chain transfer	274
9.6. Reactions with more than two free radicals	276
9.6.1. Rice-Herzfeld mechanisms: thermal cracking	277
9.6.2. Autoxidation	283
9.6.3. Reactions with chain branching: the hydrogen-oxygen reaction	286
9.7. Inhibition and induction periods	290
Summary	292
References	293
Chapter 10	
Polymerization	299
10.1. Types of polymerization reactions	299
10.2. Step-growth polymerization	302
10.2.1. Functionality	302
10.2.2. Mechanism and rate	303
10.2.3. Degree of polymerization and molecular weight	307
10.3. Free-radical polymerization	311
10.3.1. Mechanism and rate	311
10.3.2. Photochemical initiation	318
10.3.3. Chain length	318
10.3.4. Degree of polymerization and molecular weight	320
10.4. Ionic polymerization	324
10.4.1. Anionic polymerization	325
10.4.2. Cationic polymerization	332
10.5. Coordination polymerization	334
10.5.1. Mechanism	335
10.5.2. Molecular-weight distribution and degree of polymerization	337
10.5.3. Polymerization rate	339

10.6. Chain-growth copolymerization	340
10.6.1. Polymer composition: reactivity ratios and copolymer equation	340
10.6.2. Polymerization rate	344
Summary	347
References	349

Chapter 11

Mathematical Modeling	355
11.1. Strategies of process development	355
11.2. Effective mathematical modeling	359
11.2.1. Complete fundamental modeling with Bodenstein approximation	359
11.2.2. Streamlining for large networks	365
11.2.3. Determination of coefficients	368
11.3. "Shortsightedness" of elementary reaction steps	369
11.4. Model validation	371
Summary	373
References	374

Chapter 12

Unusual thermal and mass-transfer effects	375
12.1. Anomalous temperature dependence	375
12.1.1. Negative apparent activation energies	376
12.1.2. Change in rate control with change in temperature	379
12.1.3. Rate maxima and minima	381
12.1.4. Activation energies of phenomenological coefficients	382
12.2. Uncommon heat-transfer problems	383
12.3. Uncommon mass-transfer problems	385
Summary	387
References	388
