PREFACE XI

---

EXAMPLES/MATHCAD FUNCTIONS/ALGORITHMS XIII

---

## 1

FOUNDATIONS 1

---

- 1.1 Sample Problems and Numerical Methods 4
  - 1.1.1 Roots of Nonlinear Equations 4
  - 1.1.2 Fixed-Point Iteration 5
  - 1.1.3 Linear Systems 6
  - 1.1.4 Gaussian Elimination 7
  - 1.1.5 Numerical Integration 8
  - 1.1.6 Trapezoid Rule 8
- 1.2 Some Basic Issues 10
  - 1.2.1 Key Issues for Iterative Methods 10
  - 1.2.2 How Good Is the Result? 14
  - 1.2.3 Getting Better Results 22
- 1.3 Getting Started in Mathcad 28
  - 1.3.1 Overview of the Mathcad Workspace 28
  - 1.3.2 Mathematical Computations 31
  - 1.3.3 Operators on the Math Toolbars 32
  - 1.3.4 Built-In Functions 35
  - 1.3.5 Programming in Mathcad 38

## 2

SOLVING EQUATIONS OF ONE VARIABLE 47

---

- 2.1 Bisection Method 50
  - 2.1.1 Step-by-Step Computation 50
  - 2.1.2 Mathcad Function for Bisection 52
  - 2.1.3 Discussion 54
- 2.2 Regula Falsi and Secant Methods 55
  - 2.2.1 Step-by-Step Computation for Regula Falsi 56
  - 2.2.2 Mathcad Function for the Regula Falsi Method 58
  - 2.2.3 Step-by-Step Computation for the Secant Method 60
  - 2.2.4 Mathcad Function for the Secant Method 62
  - 2.2.5 Discussion 64
- 2.3 Newton's Method 68
  - 2.3.1 Step-by-Step Computation 68
  - 2.3.2 Mathcad Function for Newton's Method 70
  - 2.3.3 Discussion 72
- 2.4 Muller's Method 75
  - 2.4.1 Step-by-Step Computation for Muller's Method 76

|                                            |    |
|--------------------------------------------|----|
| 2.4.2 Mathcad Function for Muller's Method | 78 |
| 2.4.3 Discussion                           | 80 |
| 2.5 Mathcad's Methods                      | 81 |
| 2.5.1 Using the Built-In Functions         | 81 |
| 2.5.2 Understanding the Algorithms         | 84 |

### 3 SOLVING SYSTEMS OF LINEAR EQUATIONS: DIRECT METHODS 93

---

|                                                               |     |
|---------------------------------------------------------------|-----|
| 3.1 Gaussian Elimination                                      | 96  |
| 3.1.1 Using Matrix Notation                                   | 97  |
| 3.1.2 Step-by-Step Procedure                                  | 98  |
| 3.1.3 Mathcad Function for Basic Gaussian Elimination         | 101 |
| 3.1.4 Discussion                                              | 103 |
| 3.2 Gaussian Elimination with Row Pivoting                    | 106 |
| 3.2.1 Step-by-Step Computation                                | 106 |
| 3.2.2 Mathcad Function for Gaussian Elimination with Pivoting | 110 |
| 3.2.3 Discussion                                              | 113 |
| 3.3 Gaussian Elimination for Tridiagonal Systems              | 113 |
| 3.3.1 Step-by-Step Procedure                                  | 116 |
| 3.3.2 Mathcad Function for the Thomas Method                  | 118 |
| 3.3.3 Discussion                                              | 119 |
| 3.4 Mathcad's Methods                                         | 122 |
| 3.4.1 Using the Built-In Functions                            | 122 |
| 3.4.2 Understanding the Algorithms                            | 122 |

### 4 SOLVING SYSTEMS OF LINEAR EQUATIONS: ITERATIVE METHODS 131

---

|                                                        |     |
|--------------------------------------------------------|-----|
| 4.1 Jacobi Method                                      | 135 |
| 4.1.1 Step-by-Step Procedure for Jacobi Iteration      | 136 |
| 4.1.2 Mathcad Function for the Jacobi Method           | 139 |
| 4.1.3 Discussion                                       | 142 |
| 4.2 Gauss-Seidel Method                                | 144 |
| 4.2.1 Step-by-Step Computation for Gauss-Seidel Method | 145 |
| 4.2.2 Mathcad Function for Gauss-Seidel Method         | 148 |
| 4.2.3 Discussion                                       | 150 |
| 4.3 Successive Overrelaxation                          | 151 |
| 4.3.1 Step-by-Step Computation of SOR                  | 152 |
| 4.3.2 Mathcad Function for SOR                         | 154 |
| 4.3.3 Discussion                                       | 155 |
| 4.4 Mathcad's Methods                                  | 157 |
| 4.4.1 Using the Built-In Functions                     | 157 |
| 4.4.2 Understanding the Algorithms                     | 159 |

### 5 SYSTEMS OF EQUATIONS AND INEQUALITIES 171

---

|                                                 |     |
|-------------------------------------------------|-----|
| 5.1 Newton's Method for Systems of Equations    | 174 |
| 5.1.1 Matrix-Vector Notation                    | 176 |
| 5.1.2 Mathcad Function for Newton's Method      | 177 |
| 5.2 Fixed-Point Iteration for Nonlinear Systems | 181 |
| 5.2.1 Step-by-Step Computation                  | 182 |

|                                                                        |     |
|------------------------------------------------------------------------|-----|
| 5.2.2 Mathcad Function for Fixed-Point Iteration for Nonlinear Systems | 182 |
| 5.2.3 Discussion                                                       | 186 |
| 5.3 Minimum of a Nonlinear Function                                    | 187 |
| 5.3.1 Step-by-Step Computation of Minimization by Gradient Descent     | 187 |
| 5.3.2 Mathcad Function for Minimization by Gradient Descent            | 188 |
| 5.4 Mathcad's Methods                                                  | 192 |
| 5.4.1 Using the Built-In Functions                                     | 192 |
| 5.4.2 Understanding the Algorithms                                     | 193 |

## 6 LU FACTORIZATION 201

---

|                                                                        |     |
|------------------------------------------------------------------------|-----|
| 6.1 LU Factorization from Gaussian Elimination                         | 203 |
| 6.1.1 A Step-by-Step Procedure for LU Factorization                    | 204 |
| 6.1.2 Mathcad Function for LU Factorization Using Gaussian Elimination | 206 |
| 6.2 LU Factorization of Tridiagonal Matrices                           | 207 |
| 6.2.1 Step-by-Step LU Factorization of a Tridiagonal Matrix            | 207 |
| 6.2.2 Mathcad Function for LU Factorization of a Tridiagonal Matrix    | 208 |
| 6.3 LU Factorization with Pivoting                                     | 209 |
| 6.3.1 Step-by-Step Computation                                         | 209 |
| 6.3.2 Mathcad Function for LU Factorization with Row Pivoting          | 210 |
| 6.3.3 Discussion                                                       | 212 |
| 6.4 Direct LU Factorization                                            | 215 |
| 6.4.1 Direct LU Factorization of a General Matrix                      | 215 |
| 6.4.2 LU Factorization of a Symmetric Matrix                           | 217 |
| 6.5 Applications of LU Factorization                                   | 219 |
| 6.5.2 Solving a Tridiagonal System Using LU Factorization              | 222 |
| 6.5.3 Determinant of a Matrix                                          | 224 |
| 6.5.4 Inverse of a Matrix                                              | 224 |
| 6.6 Mathcad's Methods                                                  | 226 |
| 6.6.1 Using the Built-In Functions                                     | 226 |
| 6.6.2 Understanding the Algorithms                                     | 226 |

## 7 EIGENVALUES, EIGENVECTORS, AND QR FACTORIZATION 233

---

|                                                |     |
|------------------------------------------------|-----|
| 7.1 Power Method                               | 236 |
| 7.1.1 Basic Power Method                       | 237 |
| 7.1.2 Inverse Power Method                     | 242 |
| 7.1.3 Discussion                               | 247 |
| 7.2 QR Factorization                           | 248 |
| 7.2.1 Householder Transformations              | 248 |
| 7.2.2 Givens Transformations                   | 257 |
| 7.2.3 Basic QR Factorization                   | 261 |
| 7.3 Finding Eigenvalues Using QR Factorization | 267 |
| 7.3.1 Basic QR Eigenvalue Method               | 267 |
| 7.3.2 Better QR Eigenvalue Method              | 268 |
| 7.3.3 Discussion                               | 270 |
| 7.4 Mathcad's Methods                          | 270 |
| 7.4.1 Using the Built-In Functions             | 270 |
| 7.4.2 Understanding the Algorithms             | 271 |

## 8 INTERPOLATION 283

---

- 8.1 Polynomial Interpolation 286
  - 8.1.1 Lagrange Interpolation Polynomials 286
  - 8.1.2 Newton Interpolation Polynomials 295
  - 8.1.3 Difficulties with Polynomial Interpolation 306
- 8.2 Hermite Interpolation 310
- 8.3 Rational Function Interpolation 316
- 8.4 Spline Interpolation 320
  - 8.4.1 Piecewise Linear Interpolation 321
  - 8.4.2 Piecewise Quadratic Interpolation 322
  - 8.4.3 Piecewise Cubic Interpolation 325
- 8.5 Mathcad's Methods 334
  - 8.5.1 Using the Built-In Functions 334
  - 8.5.2 Understanding the Algorithms 335

## 9 FUNCTION APPROXIMATION 349

---

- 9.1 Least Squares Approximation 352
  - 9.1.1 Linear Least-Squares Approximation 352
  - 9.1.2 Quadratic Least-Squares Approximation 359
  - 9.1.3 Cubic Least-Squares Approximation 364
  - 9.1.4 Least-Squares Approximation for Other Functional Forms 369
- 9.2 Continuous Least-Squares Approximation 373
  - 9.2.1 Continuous Least-Squares with Orthogonal Polynomials 376
  - 9.2.2 Gram-Schmidt Process 376
  - 9.2.3 Legendre Polynomials 378
  - 9.2.4 Least-Squares Approximation with Legendre Polynomials 379
- 9.3 Function Approximation at a Point 381
  - 9.3.1 Taylor Approximation 381
  - 9.3.2 Padé Function approximation 382
- 9.4 Mathcad's Methods 385
  - 9.4.1 Using the Built-in Functions 385
  - 9.4.2 Understanding the Algorithms 386

## 10 FOURIER METHODS 393

---

- 10.1 Fourier Approximation and Interpolation 396
- 10.2 Fast Fourier Transforms for  $n = 2^r$  407
  - 10.2.1 Discrete Fourier Transform 407
  - 10.2.2 Fast Fourier Transform 408
- 10.3 Fast Fourier Transforms for General  $n$  415
- 10.4 Mathcad's Methods 423
  - 10.4.1 Using the Built-In Functions 423
  - 10.4.2 Understanding the Algorithms 424

## 11 NUMERICAL DIFFERENTIATION AND INTEGRATION 436

---

- 11.1 Differentiation 436
  - 11.1.1 First Derivatives 436

|                                             |     |
|---------------------------------------------|-----|
| 11.1.2 Higher Derivatives                   | 440 |
| 11.1.3 Partial Derivatives                  | 441 |
| 11.1.4 Richardson Extrapolation             | 442 |
| 11.2 Basic Numerical Integration            | 445 |
| 11.2.1 Trapezoid Rule                       | 446 |
| 11.2.2 Simpson Rule                         | 448 |
| 11.2.3 The Midpoint Formula                 | 450 |
| 11.2.4 Other Newton-Cotes Open Formulas     | 452 |
| 11.3 Better Numerical Integration           | 452 |
| 11.3.1 Composite Trapezoid Rule             | 453 |
| 11.3.2 Composite Simpson's Rule             | 455 |
| 11.3.3 Extrapolation Methods for Quadrature | 458 |
| 11.4 Gaussian Quadrature                    | 462 |
| 11.4.1 Gaussian Quadrature on $[-1,1]$      | 462 |
| 11.4.2 Gaussian Quadrature on $[a,b]$       | 464 |
| 11.5 Mathcad's Methods                      | 468 |
| 11.5.1 Using the Operators                  | 468 |
| 11.5.2 Understanding the Algorithms         | 469 |

## 12 ORDINARY DIFFERENTIAL EQUATIONS: INITIAL-VALUE PROBLEMS 477

---

|                                               |     |
|-----------------------------------------------|-----|
| 12.1 Taylor Methods                           | 479 |
| 12.1.1 Euler's Method                         | 479 |
| 12.1.2 Higher-Order Taylor Methods            | 484 |
| 12.2 Runge-Kutta Methods                      | 487 |
| 12.2.1 Midpoint Method                        | 487 |
| 12.2.2 Other Second-Order Runge-Kutta Methods | 492 |
| 12.2.3 Third-Order Runge-Kutta Methods        | 494 |
| 12.2.4 Classic Runge-Kutta Method             | 495 |
| 12.2.5 Other Runge-Kutta Methods              | 499 |
| 12.2.6 Runge-Kutta-Fehlberg Methods           | 501 |
| 12.3 Multistep Methods                        | 502 |
| 12.3.1 Adams-Bashforth Methods                | 502 |
| 12.3.2 Adams-Moulton Methods                  | 508 |
| 12.3.3 Predictor-Corrector Methods            | 509 |
| 12.4 Stability                                | 514 |
| 12.5 Mathcad's Methods                        | 517 |
| 12.5.1 Using the Built-In Functions           | 517 |
| 12.5.2 Understanding the Algorithms           | 520 |

## 13 SYSTEMS OF ORDINARY DIFFERENTIAL EQUATIONS 529

---

|                                                   |     |
|---------------------------------------------------|-----|
| 13.1 Higher-Order ODEs                            | 532 |
| 13.2 Systems of Two First-Order ODE               | 534 |
| 13.2.1 Euler's Method for Solving Two ODE-IVPs    | 534 |
| 13.2.2 Midpoint Method for Solving Two ODE-IVPs   | 537 |
| 13.3 Systems of First-Order ODE-IVP               | 541 |
| 13.3.1 Euler's Method for Solving Systems of ODEs | 542 |

|        |                                                 |     |
|--------|-------------------------------------------------|-----|
| 13.3.2 | Runge-Kutta Methods for Solving Systems of ODEs | 544 |
| 13.3.3 | Multistep Methods for Systems                   | 552 |
| 13.4   | Stiff ODE and Ill-Conditioned Problems          | 557 |
| 13.5   | Mathcad's Methods                               | 559 |
| 13.5.1 | Using the Built-In Functions                    | 559 |
| 13.5.2 | Understanding the Algorithms                    | 562 |

## 14 ORDINARY DIFFERENTIAL EQUATIONS—BOUNDARY VALUE PROBLEMS 575

---

|        |                                                          |     |
|--------|----------------------------------------------------------|-----|
| 14.1   | Shooting Method for Solving Linear BVP                   | 578 |
| 14.1.1 | Simple Boundary Conditions                               | 578 |
| 14.1.2 | General Boundary Condition at $x = b$                    | 583 |
| 14.1.3 | General Boundary Conditions at Both Ends of the Interval | 584 |
| 14.2   | Shooting Method for Solving Nonlinear BVP                | 585 |
| 14.2.1 | Nonlinear Shooting Based on the Secant Method            | 585 |
| 14.2.2 | Nonlinear Shooting Using Newton's Method                 | 588 |
| 14.3   | Finite-Difference Method for Solving Linear BVP          | 592 |
| 14.4   | Finite-Difference Method for Nonlinear BVP               | 599 |
