Part I The Interacting Materials

Chapter 1	The Soil as a Porous Medium	3
1.1	The Solid Phase	4
1.1.1	Clay Materials	5
1.1.2	Minerals Other Than Clays	7
1.1.3	Soil Organic Matter	8
1.1.4	Interactions Between Components of the Solid Phase	10
1.1.5	The Electrified Surface of the Solid Phase	12
1.2	The Liquid Phase	13
1.2.1	Water Near Soil Solid Phase	13
1.2.2	The Aqueous Solution	15
1.3	The Soil Gaseous Phase	17
1.4	The Soil as Biological System	18
1.4.1	Soil Biota: Components and Distribution	18
1.4.2	Microorganism Bioactivity	19
1.5	Soil Heterogeneity	21
	References	22
Chapter 2	The Soil Pollutants	25
2.1	Inorganic and Inorganic-Organically Combined Pollutants	25
2.1.1	Nitrogen Forms	25
2.1.2	Phosphorus Forms	27
2.1.3	Salts	29
2.1.4	Potentially Toxic Trace Elements	32
2.2	Toxic Organic Residues	41
2.2.1	Small Organic Molecules	42
2.2.2	Organic Macromolecules	49
	References	51

Part II Pollutants Partitioning Among Soil Phases

Chapter 3	Pollutants-Soil Solution Interactions	57
3.1	Acid-Base Equilibria	58
3.2	Precipitation-Dissolution	59
3.3	Ligand Effect	61
3.4	Oxidation-Reduction Equilibrium	63
3.5	Effects of Mixed Solvents and Surfactants	64
3.6	Temperature Effect on Solubility	66
3.7	Examples	66
3.7.1	Acid Rains and Al Dissolution	66
3.7.2	Alkaline Soils and Gypsum Dissolution	68
3.7.3	Sludge Effect on Potentially Toxic Inorganic Trace Element Solubility	69
3.7.4	Redox Processes and Metal Solubility	72
3.7.5	Solubility of Organic Solvents Under a Waste-Disposal Site	74
	References	77
 Chapter 4	 Volatilization into the Soil Atmosphere	 79
4.1	The Volatilization Process	80
4.2	Vapor Pressure and Vaporization Relationship .	81
4.3	Volatilization of Multicomponent Pollutants . .	83
4.4	Examples	84
4.4.1	Ammonia Volatilization	84
4.4.2	Pesticide Volatilization	87
4.4.3	Petroleum Products Volatilization	92
	References	97
 Chapter 5	 Retention of Pollutants on and Within the Soil Solid Phase	 99
5.1	Surface Adsorption	99
5.1.1	Adsorption of Ionic Pollutants	100
5.1.2	Adsorption of Nonionic Pollutants	107
5.1.3	Adsorption of Complex Mixtures	109
5.1.4	Adsorption Isotherms	111
5.1.5	Kinetics of Adsorption	114
5.1.6	Factors Affecting Adsorption	116
5.2	Nonadsorptive Retention	120
5.2.1	Pollutant Precipitation	121
5.2.2	Trapping	122
5.3	Examples	125

5.3.1	Pollutants Adsorption	125
5.3.2	Nonadsorptive Retention	140
	References	144

Part III Pollutant Behavior in Soils

Chapter 6 Reversible and Irreversible Retention – Release and Bound Residues

151

6.1	Retention Hysteresis	151
6.1.1	True Hysteresis	152
6.1.2	Apparent Hysteresis	154
6.1.3	Method-Created Hysteresis	156
6.2	Bound Residues	158
6.2.1	Experimental Definition	158
6.2.2	Mechanisms	159
6.3	Examples	162
6.3.1	Inorganic Pollutants	162
6.3.2	Organic Pollutants	171
6.3.3	Organo-Clays	178
	References	179

Chapter 7 Transformation and Metabolite Formation

183

7.1	Decomposition Rate	183
7.2	Abiotically Induced Transformation	185
7.2.1	Transformation in Soil Water	186
7.2.2	Transformation at the Solid-Liquid Interface ..	190
7.3	Biologically Mediated Transformations	195
7.3.1	Microbial Reactions	195
7.3.2	Transformation of Inorganic Compounds	197
7.3.3	Transformation of Organic Toxic Chemicals ..	200
7.4	Examples	203
7.4.1	Hydrolysis	204
7.4.2	The Redox Process	206
7.4.3	Photolytic Degradation	209
7.4.4	Coordinative Transformations	212
7.4.5	Liquid Mixture Transformations	215
	References	218

Chapter 8 Pollutants Transport in the Soil Medium

223

8.1	Solute Transport	223
8.1.1	Transport Mechanisms	224

8.1.2	Preferential Flow of Solute	228
8.2	Transport of Nonaqueous-Phase Liquid	230
8.3	Vapor Flux	234
8.4	Transport on Suspended Particles	236
8.4.1	Transport on Eroded Sediments	236
8.4.2	Transport in Association with Dispersed Colloidal Material	237
8.5	Factors Affecting Transport Processes	239
8.5.1	Field and Climate Variability	239
8.5.2	Heterogeneity of the Pollutant	241
8.6	Examples	241
8.6.1	Diffusion of a Degradable Pesticide	241
8.6.2	Miscible Displacement	243
8.6.3	Transport of Nonaqueous Pollutant Liquids (NAPL)	246
8.6.4	Vertical Transport of Pesticides Adsorbed on Colloids	250
8.6.5	Preferential Flow	253
8.6.6	Transport of Pathogenic Microorganisms	258
	References	259

Part IV Prediction and Remediation

Chapter 9 Modeling the Fate of Pollutants in the Soil 265

9.1	Overview of Models	265
9.2	Description of Models	267
9.2.1	Deterministic Models	268
9.2.2	Stochastic Models	277
9.3	Examples of Models Describing the Fate of Pesticides in Soils	278
9.3.1	Transport Phenomena	279
9.3.2	Sink/Source Phenomena	280
9.4	Some Problems Connected with Modeling	283
9.4.1	The Scale of Modeling	283
9.4.2	Model Sensitivity	285
9.4.3	Model Validation	287
	References	289

Chapter 10 Risks and Remedies 295

10.1	Risk Assessment	295
10.1.1	Diagnosis	296
10.1.2	Prognosis	297

10.2	Selection of Remedies	297
10.2.1	There Is No Pollution Risk in the Land Under Consideration	298
10.2.2	There Is No Risk Around the Contaminated Site	298
10.2.3	There Is a Risk for the Environment	299
10.3	Remediation Technologies	301
10.3.1	Hard Techniques with Excavation (Surgical Operation)	301
10.3.2	Soft Techniques Without Excavation (Chemotherapy)	302
10.3.3	Control and Cost	308
	References	309
Subject Index		311
