Preface

The Authors

1. Introduction	1
Overview	1
Equilibrium Retention Models	4
Freundlich	4
Langmuir	10
Two-Site Langmuir	11
General Isotherm Equations	11
Asymptotic Behavior	14
2. Methods of Obtaining and Analyzing Kinetic Data	17
Basic Kinetic Concepts	17
Types of Reactions in Soil Environments	20
Methods of Obtaining Kinetic Data	22
Relaxation Methods	22
Batch Methods	22
Batch Reactor Design	23
Mixing Techniques	26
Separation of Solid and Liquid Phases	29
<i>In Situ</i> Methods	30
Radiotracer Methods	30
Advantages and Limitations	32
Flow Methods	34
Thin Disk Method	35
Stirred-Flow Method	36
Fluidized Bed Reactor	38
Column Method with Batch Control	38
Radiotracer Methods	38
Advantages and Limitations	39
Comparison of Batch and Flow Methods	39
Special Methods for Studying Desorption Reactions	40
Flow Methods	40

Dilution Methods	40
Infinite Sink Methods	42
Special Methods for Separating Reactions	42
Data Analysis Methods	43
Initial Rate Method	44
Method of Isolation	44
Graphical Methods	45
Rate Coefficient Constancy	45
Fractional Lives Methods	46
Parameter-Optimization Methods	46
Effects of Experimental Variables on Rate Functions	48
Reactant Concentrations	48
Temperature	48
pH	49
Ionic Strength	49
Solution Composition	49
Column Transport Methods	49
3. Kinetic Retention Approaches	55
Single-Reaction Models	56
Multiple-Reaction Models	61
Two-Site Models	62
Multireaction Models	63
Sensitivity Analysis	65
Applications	67
Estimation of Overall Reaction Order	67
Variations of MRM	69
Description of Batch Kinetic Data with MRM	69
One Site or Two Sites	73
4. Transport	77
Continuity Equation	77
Transport Mechanism	80
Steady-State Flow	83
Boundary and Initial Conditions	84
Exact Solutions	85

Brenner Solution	86
Lindstrom Solution	87
Cleary and Adrian Solution	87
Estimation of D	91
Other Exact Solutions	94
Nonlinear Retention and Transport	94
Numerical Solution	97
Sensitivity Analysis	100
Applications	107
5. A Second-Order, Two-Site Transport Model	113
Second-Order Kinetics	113
Transport Model	117
Sensitivity Analysis	119
Kinetics	119
Transport	120
Applications	127
Estimation of $S_{\max}$ and F	127
Reaction Kinetics	128
Transport	131
6. Mobile-Immobile or Two-Region Transport Approaches	135
General Information	135
Estimation of α	138
Estimation of θ^m and θ^{im}	140
A Second-Order Approach	141
Initial and Boundary Conditions	145
Sensitivity Analysis	146
Applications	149
A Modified Two-Region Approach	152

7. Multicomponent and Competitive Ion Exchange Approaches	157
General Assumptions	158
Equilibrium Ion Exchange	159
Binary Homovalent Systems	160
Multiple Ion Systems	161
Variable Selectivities	163
Kinetic Ion Exchange	164
Specific Sorption	166
Simulations	167
Applications	170
8. Relationship between Models and Soil Chemical Reactions	175
Ion Exchange and Surface Complexation Kinetics	175
Surface Complexation Equilibrium	178
Model Selection	180
Irreversible Mechanisms	181
References	183
Index	197
