

# CONTENTS

## Section A. CHEMICALS AND PROCESSES

Process control for corrosion resistance	3
Handling sulfuric acid	9
Handling nitric acid	20
Handling mixed nitric and sulfuric acids	24
Handling phosphoric acid and phosphate fertilizers—I	27
Handling phosphoric acid and phosphate fertilizers—II	30
High-temperature hydrogen: Threat to alloy steels	33
Materials challenges of coal liquefaction	37
Choosing materials for CO <sub>2</sub> absorption systems	42
Choosing alloys for ammonia services	46
Corrosion in urea-synthesis reactors	54
Corrosion-free HF alkylation	58
Choosing materials for ethylbenzene services	61
Bromine chloride: Less corrosive than bromine	63
Materials for seawater cooling	66
Bacteria: Friends or foes?	70

## Section B. COATINGS AND LININGS

Engineer's guide to protective coatings	77
Corrosion protection via coatings	83
The six stages in the corrosion of coated steel	89
Make the part the cathode: Key to resistant coatings	91
Preparing for painting	94
Preparing concrete surfaces for painting	96
Choosing and applying paint	101
Applicator's guide to zinc-rich primers	104
Liquid-applied linings for steel tanks—I	107
Liquid-applied linings for steel tanks—II	110
Organic coatings for process tank linings	113
Fluorinated polymers for coating CPI equipment	119
Inspecting coatings for film thickness	124
Detecting film flaws in coatings	127
How to test linings for corrosion-resistant tanks	131

Linings for process equipment	133
Glassed steel for process equipment	142
Thermomechanical properties of glass-lined equipment	148
Pipe and equipment lined with elastomers and non-fluoropolymers	151
Fluorocarbon-lined pipe and equipment	157
Membranes behind brick—I	165
Membranes behind brick—II	168

### **Section C. TESTING, MEASUREMENT AND SPECIFICATIONS**

Detection and analysis of corrosion problems	175
Polarization data yield corrosion rates	180
Measuring corrosion in the process plant	186
Measuring corrosion as it happens	192
Why metals fail	196
Metals testing for corrosion resistance	204
Why plastics fail	209
Plastics testing for corrosion resistance	212
Specifications and the corrosion engineer	219

### **Section D. PREVENTATIVE TREATMENTS**

Cathodic and anodic protection for corrosion control	225
Welding practices that minimize corrosion—I	232
Welding practices that minimize corrosion—II	235
Selecting economic boiler-water pretreatment equipment	239
Using corrosion inhibitors	243
Volatile corrosion-inhibitors find a new home	247
Cooling water control	250
Clearing fouling and corrosion products with chemicals	261
Heat treatment protects steel alloys from hot gases	267
Controlled shotpeening prevents stress-corrosion cracking	270
