Preface	v
1 Introduction	1
1.1 Importance of Clay Minerals	1
2 Applications of Clays and Clay Minerals	5
2.1 Ceramics and Related Clay Products	5
2.1.1 Bricks and other structural ceramic ware	5
2.1.2 Refractories	6
2.1.3 Earthenware	6
2.1.4 Porcelain	6
2.1.5 Pencil leads	8
2.2 Clay as Filler Material	8
2.3 Agricultural Applications	9
2.4 Clays as Adsorptive Materials	9
2.4.1 Physical adsorption	9
2.4.2 Ion exchange	10
2.4.3 Zeolites as molecular sieves	10
2.5 Washing Scouring and Felting: Fuller's Earth	11
2.6 Talc and Its Uses	11
2.7 Smectites and Their Uses	12
2.7.1 Uses of hydrophilic smectites	12
2.7.2 Bentonites	13
3 Clay Minerals	15
3.1 Silicate Mineral Structures	15
3.1.1 The polyhedral paradigm	17
3.1.2 Polymerization of polyhedra	19
3.2 Silicate Classification	20
3.3 Structure of Phyllosilicates	21
3.3.1 Layer types	21
3.3.2 Octahedral site occupancy	25

3.3.3	Layer charge	25
3.3.4	The interlayer	28
3.3.5	Chemical variations	36
3.4	Phyllosilicate Minerals	39
3.4.1	1:1 minerals	39
3.4.2	2:1 minerals	41
3.4.3	2:1:1 minerals	46
3.5	Interlayer Water	47
3.5.1	Structure of interlayer water	47
3.6	Intercalated Organic Molecules	52
3.6.1	Organic complexes with vermiculite	54
3.6.2	Organic complexes with kaolinite	60
3.6.3	Summary of molecular-clay interactions	61
3.7	Origin of Clay Minerals	64
3.7.1	Modes and environments of formation	64
3.7.2	Commercial deposits of clay minerals	66
4	Other Mineral Colloids	69
4.1	Simple Oxides	72
4.2	Halides	79
4.3	Hydroxides	81
4.4	Nesosilicates	81
4.5	Cyclosilicates	84
4.6	Sorosilicates	87
4.7	Pyroxenes	87
4.8	Amphiboles	90
4.9	Silica Minerals	93
4.10	Feldspars	101
4.11	Carbonates	101
4.12	Phosphates	104
4.13	Sulphates	104
4.14	Asbestos	116
5	Theory of Colloids	119
5.1	The Hamaker Approximation	119
5.2	The Lifshitz Approach	121
5.3	Interfacial Lifshitz-van der Waals Interactions	123
5.4	Polar Forces	125
5.5	Lewis Acid-Base Interactions	127
5.6	Polar Attractions and Repulsion	129

5.7	Electrostatic Interactions	130
5.8	Ionic Double Layer	130
5.9	Electrokinetic Phenomena	131
5.10	The ζ -Potential	132
5.10.1	Thick double layer	132
5.10.2	Thin double layer	133
5.10.3	Relaxation	134
5.11	Energy Balance Relationships	134
5.12	Decay with Distance	135
5.12.1	LW interactions	135
5.12.2	Polar interactions	136
5.13	Electrostatic Interactions	137
5.14	Energy Balance Diagrams	138
5.14.1	Types of energy balance diagram	139
6	Measurement of Surface Thermodynamic Properties	141
6.1	The Young Equation	142
6.2	The Young-Dupré Equation as a Force Balance	142
6.3	Concept of the Surface Tension of a Solid	144
6.4	Contact Angle Measurements on Heterogeneous Surfaces	145
6.4.1	The Cassie equation	145
6.4.2	The extent to which solid surfaces become heterogeneous by condensation of molecules evaporating from the liquid drop	146
6.5	Contact Angle Measurement on Solid, Flat Surfaces	148
6.5.1	Advancing and retreating contact angles	148
6.5.2	Preparation of solid surfaces	149
6.5.3	Contact angles measured with liquid 1, immersed in liquid 2	151
6.6	Other Approaches to the Interpretation of Contact Angle Data	152
6.6.1	The Zisman approach	152
6.6.2	The single polar parameter or " γ^P " approach	152
6.6.3	The "equation of state"	153
6.7	Contact Angle Determination by Wicking and Thin Layer Wicking	154
6.7.1	Determination of the average pore radius, R	156
6.7.2	Derivation of contact angles from wicking measurements	159
6.7.3	Other uses of wicking	159
6.8	Solution of the Young-Dupré Equation from Contact Angle Measurements	162

6.8.1	Minimal solution	162
6.8.2	The overdetermined case	163
6.8.3	Estimation of errors in the γ values	163
6.9	Other Methods for Determining Surface Properties	165
6.9.1	Stability of particle suspensions	165
6.9.2	Advancing freezing fronts	166
6.9.3	Force balance	167
6.9.4	Electrophoresis in monopolar organic solvents	168
6.10	Surface Tension Measurement of Liquids	168
6.10.1	The Wilhelmy plate method	169
6.10.2	Pendant drop shape	169
6.10.3	Interfacial tension between immiscible liquids	169
6.10.4	Apolar and polar surface tension component liquids	170
6.10.5	Determination of the polar surface tension parameters of liquids	172
7	Electrokinetic Methods	173
7.1	Electrophoresis	173
7.1.1	Particle microelectrophoresis	175
7.1.2	Electrophoresis in non-aqueous media	175
7.2	Electroosmosis	176
7.3	Streaming Potential and Sedimentation Potential	176
7.4	Link Between the Electrokinetic Potential and Electron Donicity	178
7.4.1	The Schulze-Hardy rule	178
8	Interactions Between Colloids	181
8.1	Introduction	181
8.2	Lifshitz-van der Waals Interactions	181
8.3	Electrostatic Interactions	182
8.4	Polar Interactions: Lewis and Brønsted Acid-Base Approaches	182
8.4.1	Lewis acid-base properties of polar condensed-phase materials	183
8.4.2	Polar solids	183
8.4.3	Polar solutes	184
8.4.4	Polar liquids	185
8.5	The Hydrophobic Effect: Hydrophobic Attraction	186
8.6	Hydrophilic Repulsion	190
8.7	Definition of Hydrophobicity and Hydrophilicity	191

8.8	DLVO Approach, Including Lewis Acid-Base Energies	193
8.8.1	Decay of interaction energies and forces as a function of distance	194
8.8.2	The extended DLVO (XDLVO) approach applied to aqueous media	195
8.8.3	Stability versus flocculation of aqueous particle suspensions	195
8.8.4	Inadequacy of "steric" stabilization theories	202
8.8.5	The extended DLVO approach in aqueous media; comparison with experimental data	203
8.8.6	Comparison between DLVO and XDLVO plots of hectorite suspensions, as a function of ionic strength	203
8.9	Influence of Plurivalent Cations on the Flocculation of Negatively Charged Particles: DLVO and XDLVO Analysis	204
8.10	Solubility	208
8.10.1	Solubility of electrolytes	209
8.10.2	Solubility of organic compounds	209
8.10.3	Solubility of surfactants and other amphipathic compounds	212
8.11	Adhesion and Adsorption	213
8.11.1	Macroscopic scale adhesion and adsorption	213
8.11.2	Adhesion and adsorption onto the water-air interface - flotation	214
8.11.3	Macroscopic and microscopic-scale adsorption phenomena combined	215
8.11.4	Adsorption and adhesion kinetics	216
8.11.5	Adsorption and adhesion equilibrium	218
8.12	Net Repulsive Interactions	218
8.12.1	Reversal of adsorption and adhesion	218
8.12.2	Temperature effects	219
8.13	Nature of Clay-water Interactions	220
8.14	Structure of Bound Outer Layer Water	221
8.15	Swelling of Clays	221
8.15.1	Nature of the swelling mechanism	221
8.15.2	Prerequisite properties of swelling clays	223
8.15.3	Influence of steam on swelling clays	224
8.15.4	Hydrophobicity of talc and pyrophyllite	225
8.16	Special Properties of Kaolinite	226

9	Surface Thermodynamic Properties of Minerals	229
9.1	Phyllosilicate Minerals	229
9.1.1	Samples	229
9.1.2	Values	230
9.1.3	Generalities; clay minerals	235
9.1.4	Role of organic material adsorbed on clays	239
9.2	Other Minerals	244
9.2.1	Generalities; other minerals	248
10	Biological Interactions with Mineral Particles	251
10.1	Interactions with Biological Systems	251
10.2	Polymer Adsorption	252
10.3	Protein Adsorption	252
10.3.1	Protein adsorption onto hydrophobic surfaces	253
10.3.2	Protein adsorption onto hydrophilic surfaces	253
10.3.3	<i>In vivo</i> consequences of protein adsorption onto clay and mineral particles	255
10.4	Pulmonary Pathogenesis	256
10.4.1	Small, roughly spherical particles	256
10.5	Needle-shaped or Fibrous Particles	256
10.5.1	The most dangerous fibrous particles	256
10.5.2	The less dangerous fibrous (asbestos) particles	257
10.5.3	A few proposed physical or chemical correlations with the pathogenicity of, e.g., amphiboles that turn out to be erroneous	258
