1	Introduction	1
1.1	General Introduction	1
1.2	Applications	2
1.2.1	Applications in Architecture	3
1.2.2	Applications in Mechanical Engineering	4
1.2.3	Applications in Biomedical Engineering	5
1.2.4	Applications in Mathematics	5
1.3	Form-Finding and Stability	6
1.3.1	General Background	6
1.3.2	Existing Form-finding Methods	7
1.3.3	Stability	9
1.4	Remarks	11
	References	11
2	Equilibrium	15
2.1	Definition of Configuration	15
2.1.1	Basic Mechanical Assumptions	16
2.1.2	Connectivity	17
2.1.3	Geometry Realization	20
2.2	Equilibrium Matrix	23
2.2.1	Equilibrium Equations by Balance of Forces	23
2.2.2	Equilibrium Equations by the Principle of Virtual Work	27
2.3	Static and Kinematic Determinacy	30
2.3.1	Maxwell's Rule	32
2.3.2	Modified Maxwell's Rule	35
2.3.3	Static Determinacy	36
2.3.4	Kinematic Determinacy	38
2.3.5	Remarks	42

2.4	Force Density Matrix	43
2.4.1	Definition of Force Density Matrix	43
2.4.2	Direct Definition of Force Density Matrix	45
2.4.3	Self-equilibrium of the Structures with Supports	46
2.5	Non-degeneracy Condition for Free-standing Structures	48
2.6	Remarks	53
	References.	54
3	Self-equilibrium Analysis by Symmetry	55
3.1	Symmetry-based Equilibrium	55
3.2	Symmetric X-cross Structure	58
3.3	Symmetric Prismatic Structures.	62
3.3.1	Dihedral Symmetry	63
3.3.2	Connectivity.	67
3.3.3	Self-equilibrium Analysis.	69
3.4	Symmetric Star-shaped Structures	75
3.4.1	Connectivity.	76
3.4.2	Self-equilibrium Analysis.	78
3.5	Regular Truncated Tetrahedral Structures.	83
3.5.1	Tetrahedral Symmetry	85
3.5.2	Self-equilibrium Analysis.	88
3.6	Remarks	94
	References.	96
4	Stability	97
4.1	Stability and Potential Energy.	97
4.1.1	Equilibrium and Stability of a Ball Under Gravity.	97
4.1.2	Total Potential Energy.	99
4.2	Equilibrium and Stiffness.	101
4.2.1	Equilibrium Equations.	102
4.2.2	Stiffness Matrices	105
4.3	Stability Criteria	111
4.3.1	Stability.	112
4.3.2	Prestress-stability	117
4.3.3	Super-stability	122
4.3.4	Remarks	127
4.4	Necessary and Sufficient Conditions for Super-stability	128
4.4.1	Geometry Matrix	129
4.4.2	Sufficient Conditions.	132
4.5	Remarks	134
	References.	135

5	Force Density Method	137
5.1	Concept of Force Density Method	137
5.1.1	Force Density Method for Cable-nets	138
5.1.2	Force Density Method for Tensegrity Structures	141
5.1.3	Super-Stability Condition	145
5.2	Adaptive Force Density Method	147
5.2.1	First Design Stage: Feasible Force Densities	147
5.2.2	Second Design Stage: Self-equilibrated Configuration	155
5.2.3	Remarks	158
5.3	Geometrical Constraints	158
5.3.1	Constraints on Rotational Symmetry	158
5.3.2	Elevation (z-Coordinates)	163
5.3.3	Summary of Constraints	164
5.3.4	AFDM with Constraints	164
5.4	Numerical Examples	165
5.4.1	Three-Layer Tensegrity Tower	165
5.4.2	Ten-Layer Tensegrity Tower	168
5.5	Remarks	169
	References	170
6	Prismatic Structures of Dihedral Symmetry	171
6.1	Configuration and Connectivity	171
6.2	Preliminary Study on Stability	173
6.3	Conventional Symmetry-adapted Approach	175
6.4	Symmetry-adapted Force Density Matrix	179
6.4.1	Matrix Representation of Dihedral Group	179
6.4.2	Structure of Symmetry-adapted Force Density Matrix	180
6.4.3	Blocks of Symmetry-adapted Force Density Matrix	185
6.5	Self-equilibrium Conditions	186
6.6	Stability Conditions	188
6.6.1	Divisibility Conditions	188
6.6.2	Super-stability Condition	194
6.7	Prestress-stability and Stability	196
6.7.1	Height/Radius Ratio	197
6.7.2	Connectivity	199
6.7.3	Materials and Level of Prestresses	200
6.8	Catalog of Stability of Symmetric Prismatic Structures	201
6.9	Remarks	203
	References	203

7	Star-Shaped Structures of Dihedral Symmetry	205
7.1	Introduction	205
7.2	Symmetry-adapted Force Density Matrix	208
7.2.1	Force Density Matrix	209
7.2.2	Structure of Symmetry-adapted Force Density Matrix	209
7.2.3	Blocks of Symmetry-adapted Force Density Matrix	212
7.3	Self-equilibrium Conditions	215
7.4	Stability Conditions	217
7.4.1	Divisibility Conditions	217
7.4.2	Super-stability Conditions	219
7.4.3	Prestress-stability	223
7.5	Multi-stable Star-shaped Structure	226
7.5.1	Preliminary Study	226
7.5.2	Multi-stable Equilibrium Path	227
7.6	Remarks	231
	References	231
8	Regular Truncated Tetrahedral Structures	233
8.1	Preliminary Study	233
8.2	Tetrahedral Symmetry	235
8.3	Symmetry-adapted Force Density Matrix	238
8.3.1	Structure of Symmetry-adapted Force Density Matrix	239
8.3.2	Blocks of Symmetry-adapted Force Density Matrix	240
8.4	Self-equilibrium Conditions	242
8.5	Super-stability Conditions	244
8.5.1	Eigenvalues of the Three-dimensional Block	244
8.5.2	Super-stability Condition for the First Solution q_{h_1}	245
8.5.3	Super-stability Condition for the Second Solution q_{h_2}	246
8.6	Remarks	248
	References	248
