

# Contents

<i>Preface</i>	v
1. INTRODUCTION	1
References	10
2. PHYSICAL PROPERTIES OF ADSORBENTS	12
I. Crystallographic Data	12
II. Thermochemical Data	49
References	63
3. SURFACE CHARGING IN ABSENCE OF STRONGLY ADSORBING SPECIES	65
I. Zero Charge Conditions	65
II. Correlations Between Zero Points and Other Physical Quantities	206
III. Surface Charging in Inert Electrolytes	223
IV. Temperature Effects	266
V. Nonaqueous Media	282
References	293
4. STRONGLY ADSORBING SPECIES	310
I. Experimental Methods	326
II. Small Ions	355
III. Organic Compounds and their Mixtures	475

IV. Surfactants	491
V. Polymers	503
VI. Competition	510
VII. Kinetics	512
References	555
5. ADSORPTION MODELING	577
I. Surface Sites	579
II. Surface Reactions and Speciation	585
III. Primary Surface Charging	589
IV. Specific Adsorption	666
V. Surface Heterogeneity	700
References	704
6. SORPTION PROPERTIES OF SELECTED ORGANIC MATERIALS	709
I. Activated Carbons	710
II. Latexes	714
III. Other Materials	715
References	715
<i>Appendix A1: Abbreviations</i>	717
<i>Appendix A2: Trade Names and Trademarks</i>	725
<i>Appendix A3: Points of Zero Charge</i>	731
<i>Index</i>	745
