

Contents

1. Introduction

1.	Occurrence and Remediation Strategies	1
1.1.	Heavy Metals	2
1.2.	Precious Metals	4
1.3.	Strategies for Obtaining Metal Ion Recognition	5

2. Phase Transfer Extraction and Adsorption Methods

1.	Introduction	9
2.	Liquid-Liquid Systems	11
2.1.	Equilibria	11
2.2.	Surfactants	12
2.3.	Ion Hydration	12
2.4.	Aqueous Biphasic Systems	15
2.5.	Liquid Membranes	16
2.6.	Picrate Method of Analysis	19
3.	Adsorption Methods	20
3.1.	Ion Exchange Methods	20
3.2.	Adsorbent and Membrane Methods	23
3.3.	Polymer Filtration Methods	24
3.4.	Uncharged Solid Phase Adsorbent Materials	25
3.4.1	Metals	25
3.4.2	Carbon and Silicon	26
3.4.3	Metal Oxides	27
3.5.	Silicates and Zeolites	28
3.6.	Polymers and Biopolymers	29

3. Soil Washing Methods and *In Situ* Stabilization Methods

1.	Introduction	35
----	--------------------	----

2.	Soil Washing and Flooding	36
2.1	Soil Washing	37
2.2	<i>In Situ</i> Stabilization	39
3.	Analytical Techniques	41
4.	Extraction from Soils	43
5.	Complexant Design for Soil Extraction	44

4. Electrokinetic Extraction of Metals from Soils

1.	Introduction	47
2.	Electrokinetic Extraction	47
2.1.	Electrokinetic Transport Model	50
2.2.	Experimental Method	52
2.3.	Electrokinetic Extraction of Copper, Lead, Cadmium, and Mercury	54
2.4.	Electrokinetic Extraction of Uranium and the Other Radionuclides	57
2.5.	Electrokinetic Extraction of Chromium	58

5. Selective Extraction with Chelates, Macrocycles, and Calixarenes

1.	Introduction	63
2.	Multidentate Ligands	65
2.1.	Dithio- and Diselenocarbamates	66
2.2.	Aminopolycarboxylic Acids, Amides, and Aminimides	68
2.3.	Oximes and Hydroxyaromatic Derivatives	72
2.4.	Others	75
2.5.	Extractants for Supercritical Carbon Dioxide	80
3.	Macrocyclic Ligands	81
3.1.	Oxygen Macrocycles	82
3.2.	Azamacrocycles and Thiamacrocycles	84
4.	Calixarenes	95
5.	Limitations of Chelate, Macrocycle, and Calixarene Extractants	100

6. Phase Transfer Extraction of Mercury

1.	Background	105
1.1.	Toxicity and Occurrence	106

2.	Complexants	107
2.1.	Oxygen Donors	108
2.2.	Nitrogen Donors	109
2.3.	Sulfur Donors	109
3.	Chelates and Multidentates	109
3.1.	Sulfur and Nitrogen Donor Chelates	110
3.1.1.	Dithiocarbamates	111
3.1.2.	Thiocarbazone	112
3.1.3.	Sulfur Containing Metal Complexes	112
4.	Extraction and Detection Techniques	113
5.	Column Materials for Mercury Separation	114
5.1.	Organic Adsorbents	115
5.2.	Inorganic Adsorbents	115
6.	Macrocycles and Open Chain Analogs	116
6.1.	Open Chain Analogs	116
6.2.	N-Donor Macrocycles	117
6.3.	S-Donor Macrocycles	117
6.4.	O-Donor Macrocycles	118
6.5.	N, O-Donor Macrocycles	119
6.6.	Chromogenic and Fluorogenic Macrocycles	121
7.	Porphyrins	121
8.	Calixarenes	122
8.1.	P and S-Donor Calixarenes	122
8.2.	N-Donor Calixarenes	124
9.	Elemental Mercury	125

7. Phase Transfer Extraction of Lead and Cadmium

1.	Lead	129
1.1.	Toxicity and Occurrence	129
1.2.	Complexants	130
1.2.1.	Halides and Acids	130
1.2.2.	Poly(ethylene glycol)	132
1.3.	Chelates and Macrocycles	133
1.3.1.	Chelating Agents for <i>In Vivo</i> Extraction Therapy	133
1.3.2.	Oxygen and Nitrogen Donor Extractants	134
1.3.3.	Sulfur Donor Dithiocarbamate Extractants	135

	1.3.4.	Analytical Methods for Lead	136
	1.3.5.	Other Sulfur Donor Extractants	137
1.4.		Macrocycles	139
	1.4.1.	Oxygen Donors	140
	1.4.2.	Nitrogen Donors	141
	1.4.3.	Sulfur Donors	143
1.5.		Calixarenes	145
1.6.		Liquid Carbon Dioxide as the Non-Aqueous Phase	146
1.7.		Biological	148
1.8.		Ingestion from Paper	148
1.9.		Analytical Methods for Lead	148
	1.9.1.	Biological Samples	149
	1.9.2.	Sediment Samples	149
	1.9.3.	Microextraction	150
2.		Cadmium	151
	2.1.	Toxicity and Occurrence	151
	2.2.	Chelates and Macrocycles	152
	2.2.1.	Chelating Agents for Extraction Therapy	152
	2.2.2.	Nitrogen and Oxygen Donor Extractants	152
	2.3.	Sulfur Donors	154
	2.3.1.	Dithiocarbamates	155
	2.3.2.	Other Sulfur Donors	156
	2.4.	Cyclodextrins and Carbohydrates	157
	2.5.	Cadmium Incorporation into the Food Chain	158
8.		Phase Transfer Extraction of Copper, Silver and Gold	
	1.	Copper.	164
	1.1.	Monodentate Ligands	164
	1.1.1.	Thiocyanate	164
	1.1.2.	Cyanide	164
	1.1.3.	Mineral Acids	165
	1.1.4.	Amines	165
	1.1.5.	Micelles and Vesicles	165
	1.2.	Chelate Ligands	166
	1.2.1.	Oxygen Donors	166
	1.2.2.	Oximes	168
	1.2.3.	Aliphatic and Aromatic Nitrogen Chelates	172

	1.2.4.	Other N,O Chelates	173
	1.2.5.	Sulfur-Donor Chelates	174
1.3.		Macrocycles and Calixarenes	175
	1.3.1.	Azamacrocycles	175
	1.3.2.	Thiamacrocycles	176
1.4.		Calixarenes	177
1.5.		Porphyrins	177
1.6.		Carbon Dioxide	177
1.7.		Others	178
2.		Silver and Gold	179
	2.1.	Monodentates	179
	2.1.1.	Cyanide	179
	2.1.2.	Amines	180
	2.1.3.	Oxygen Donors	180
	2.1.4.	Particles	180
	2.1.5.	Detergents and Salts	181
	2.2.	Chelates	181
	2.2.1.	N, O-Chelates	181
	2.2.2.	S-Chelates	183
	2.3.	Macrocycles	184
	2.3.1.	Azamacrocycles and Thiamacrocycles	184
	2.3.2.	Thiolariat Ethers	187
	2.3.3.	Hydrocarbons	187
	2.4.	Calixarenes	187

9. Extraction of Actinides and Lanthanides

1.		Actinides	193
	1.1.	Introduction	193
	1.2.	Monodentates	193
	1.2.1.	Carboxylic Acids	194
	1.2.2.	Phosphates and Phosphine Oxides	194
	1.2.3.	Amines and Ketones	196
	1.3.	Multidentates	197
	1.3.1.	N, O Chelates	197
	1.3.2.	Malonamides	198
	1.3.3.	Chemical Detection and Analysis	202
	1.3.4.	Stereognostic Coordination	203
	1.3.5.	Carbamoyl Phosphonates	204
	1.3.6.	Crown Ethers and Cavitands	204

	1.3.7.	Calixarenes	205
2.	Lanthanides		206
	2.1.	Monodentates	207
	2.2.1.	Carboxylates	207
	2.2.2.	Phosphates	209
	2.2.3.	Ketones and Phosphine Oxides	210
	2.2.4.	Crown Ethers	212
	2.2.5.	Nitrogen Donors	214
	2.2.6.	EDTA and Analogues	217
	2.2.7.	Aromatic Chelates	219
	2.2.8.	Phosphoramides	222
	2.2.9.	Miscellaneous Methods	225

10. Extraction of Anions and Oxyanions

1.	Introduction	231
2.	Toxicological Effects	233
3.	Analytical Techniques	234
4.	Extraction Methods	234
5.	Complexant Design	237
	5.1. Acyclic Ligating Sites	237
	5.2. Amines	238
	5.2.1 Ferrocene Derivatives	239
	5.3. Calixarenes	240
	5.3.1. Calixarenes Amines and Amides	240
	5.4. Poly(ethylene glycol)	243
6.	Extraction from Soils	243

11. Extraction of Alkali and Alkaline Earth Metals

1.	Introduction	247
2.	Crown Ethers	248
2.1.	Crown and <i>Bis</i> -Crowns	248
2.2.	Capped Cleft Molecules	253
2.3.	Biphasic Media	254
2.4.	Transport Phenomena	255
2.5.	Carboxylate Crowns	261
2.6.	Phosphonate Crowns	261
2.7.	Lariat Crowns	263
2.8.	Amino Crowns	264
2.9.	Aza Crowns and Photocrowns	266

3.	Specialty Crowns	270
4.	Cavitands and Cryptands	273
5.	Other Oxygen Donors	276
6.	Metal Oxides	279
7.	Physical Methods	279
8.	Cesium.....	281

12. Phytoremediation and Bioremediation of Soils and Waters

1.	Introduction	289
2.	Phytoremediation	290
2.1.	Chromium (VI)	292
2.2.	Cadmium, Lead, Copper, and Zinc	293
2.3.	Mercury	296
2.4.	Radionuclides	296
3.	Bioremediation	297
3.1.	Mercury	298
3.2.	Cadmium, Copper, and Lead	299
3.3.	Actinides	300
3.4.	Chromium	301

13. Optical and Redox Sensors with Metal Ions

1.	Introduction	307
2.	Optical Reporter Molecules	308
3.	Redox Reporter Molecules	310
4.	Chemiluminescence	310
5.	Chelate Complexants	311
5.1.	Nitrogen and Oxygen Donors	311
5.2.	Conformational and Steric Effects	316
5.3.	Sulfur Donors	317
5.4.	Ruthenium Bipyridyl Complexes as Sensors.....	319
5.5.	Calixarene Complexants	320
5.6.	Optical Reporters on Calixarenes	320
5.7.	Redox Reporters on Calixarenes	326
5.8.	Lanthanide Reporters on Calixarenes	326
6.	Macrocyclic Complexants	327
6.1.	N, O, and S-Donors	328
6.2.	Azamacrocycles	332
6.3.	Cryptands	334
6.4.	Porphyrins and Pyrroles	336

7.	Crown Ethers and Cryptands for Alkali and Alkaline Earth Chemosensors.....	338
7.1.	Naphthalene and Anthracene Reporters	339
7.2.	Iron Sulfur Cluster Reporters	344
7.3.	Structural Features	344
8.	Sensors for Biological Applications	345
8.1.	Sodium	346
8.2.	Potassium	347
8.3.	Calcium.....	347
8.4.	Zinc	349
8.5.	Lanthanides	351
8.6.	Signal Transmission	352
9.	Solid State Sensors	353
10.	Sensors for Anions	355
10.1.	Acyclic Ligating Sites	355
10.2.	Calixarenes	357
11.	Molecular Computation	359

Index	365
