Foreword to the First Edition xvii

Preface..... xix

Author xxi

Introduction.....xxiii

Chapter 1 Reliability Fundamentals I: Component Reliability 1

 Introduction 1

 The Importance of Reliability 1

 History 1

 Definitions 2

 Reliability 2

 Maintainability 2

 Availability 2

 Unreliability 3

 Unavailability 3

 Component 3

 Correlation Coefficient 3

 System 3

 Failure 3

 Failure Rate..... 4

 Failure Probability Density Function 4

 Sample 4

 Population..... 4

 Acronyms 4

 Basic Statistics..... 5

 Probability 5

 Assignment..... 6

 The Failure Probability Density Function 6

 Three Common Failure Patterns..... 7

 The Negative Exponential Distribution 8

 The Mathematics of Randomness 9

 The Normal Distribution 10

 The Weibull Distribution 10

 The Bathtub Curve..... 13

 Weibull Analysis..... 13

 Problems with Weibull..... 17

 Weibull Cautions 19

 Using Weibull When Very Little Data Are Available..... 19

 Assignments 20

 Assignment 1.1: Weibull Familiarisation 20

 Assignment 1.2: Weibull Problem 20

Assignment 1.3: Another Weibull Problem	20
Assignment 1.4: Spring Design	21
Assignment 1.5: Weibull Analysis of Rolling Element Bearings	21
Assignment 1.6: New Era Fertilizer Plant	22
Assignment 1.7: The Life History of a Hillman Vogue Sedan	25
Note	30
Chapter 2 Reliability Fundamentals II: System Reliability	31
A Note of Caution	33
System Configurations	34
Redundancy	34
M-Out-of-N Redundancy	35
System Reliability Prediction	37
Availability and Maintainability	39
The Maintainability Equation	40
The Equations for System Availability	40
Storage Capacity (Figure 2.10)	41
Reduced-Capacity States	42
Other Forms of System Reliability Analysis	43
Method 1: Deconstruction Method	44
Method 2: Cut Sets	44
Monte Carlo Simulation	45
Markov Simulation	45
Interconnections	47
Laplace Analysis	48
Failure Modes and Effects Analysis (FMEA) and Failure Modes and Effects Criticality Analysis (FMECA)	49
History	49
Flavours of FMEA/FMECA	50
Process vs Design or Product FMEA/FMECA	50
Design FMECA	53
Which Templates to Use?	53
Basic Analysis Procedure for an FMEA or FMECA	53
Advantages of the FMEA/FMECA Process	54
Limitations of the FMEA/FMECA Process	54
FMEA of a Scraper Winch	55
Operation	55
Common Failures and Recent Improvements	56
Assignment	58
Fault Tree Analysis	58
Assignment	61
Additional Assignments	62
Assignment 2.1	62

The V1 62

Assignment 2.2 62

 The Parallel System of Conveyors 62

Assignment 2.3 62

 Availability Upgrade 62

Assignment 2.4 62

 Laplace Calculation 62

Assignment 2.5 62

 A System Availability Prediction 62

Abbreviations 63

Notes 64

Chapter 3 Maintenance Optimisation 65

Maintenance—Raison D’être 65

Know Your Plant, Keep It Good as New 65

Data Collection 69

The Big Five 70

Maintenance Optimisation 71

RCM 72

 The RCM Process 73

 The RCM Decision Diagram 74

 On-Condition Inspection Task 74

 Scheduled Rework 74

 Scheduled Discard 75

 Acronyms 75

 The RCM Failure Modes and Effects Analysis 75

 Alternative and Modified Forms of RCM 76

 Summary of the RCM Output 77

 An RCM Example 77

 Economic Evaluation 78

 Total Productive Maintenance, TPM 78

 The Five Pillars Definition of TPM 80

 The Six Major Losses (Manufacturing Industry) 80

 The Eight Major Losses (Process Industry) 80

 The Primary TPM Metric: OEE 80

 The Goals of TPM 81

 Zero Breakdowns 81

 Zero Adjustments 82

 Zero Idling and Zero Minor Stoppages 83

 Speed Loss 83

 Quality Problems 83

Semantics in Maintenance Management: Explanation
 and Qualification 85

ISO 55000 88

Wrench Time 90

Takeout: Panel—Work Sampling	92
Takeout: End of Panel	92
Estimating Job Times	94
Note	141
Chapter 4 Condition Monitoring	143
The Four Kinds of Maintenance	143
The Major Types of Condition Monitoring	145
Vibration Monitoring	145
The Time Domain	145
The Frequency Domain	145
The Measurement of Vibration	146
Positioning of Transducers	148
Detection of Various Vibration Problems	148
Resonance	150
Unbalance	150
Misalignment	150
Rolling Element Bearings	150
Ultrasonics	152
Plain Bearings	152
Gearboxes	154
Sidebands	154
Compressors	156
Fans	157
Oil Analysis	157
History	157
Requirements for Oil Analysis	158
A Basic Test Programme	159
Viscosity	159
Water Content	160
Acid Number	160
Oxidation	160
Element Analysis	160
Additional Oil Analysis Tests	160
Particle Count	161
Ferrography	161
Flash Point	161
Thermography	161
Chapter 5 Incident Investigation or Root Cause Analysis	163
Introduction	163
Scope of Any Investigation	164
Definitions and Abbreviations	164
Definitions	164

- Root Cause Analysis 164
- Abbreviations and Acronyms 164
- Root Cause Analysis 164
- Incident Investigation Techniques 165
- The Five Whys..... 165
- Kepner-Tregoe and Its Derivatives 166
 - Step 1: Problem Definition 166
 - Step 2: The Problem Described in Detail: Identity,
Location, Timing, Magnitude 166
 - Step 3: Where Does the Malfunction NOT Occur? 166
 - Step 4: What Differences Could Have Caused the
Malfunction? 166
 - Step 5: Analyse the Differences..... 167
 - Step 6: Verify Proposed Solution 167
- The ASSET Methodology 167
 - Background to the Process..... 167
 - The Sequence of Actions in the ASSET Process 168
- Personnel Errors..... 168
 - Reliability at Work 169
 - External Factors 169
 - Physical Environment 170
 - Safety Culture 170
 - Qualification to Perform the Task 170
 - Training..... 170
 - Educational Background..... 170
- Contributors to the Identified Errors..... 170
- Procedural Errors..... 171
 - Reliability of the Procedures..... 171
 - Assurance of Currency..... 171
 - Scope Limitations 171
 - Adaptation to Working Conditions 172
 - Ergonomics 172
 - Environmental Adaptation 172
 - Task Qualification 172
 - Adequacy of Content 172
 - Background Support 172
 - Contributors 172
- Deficiencies in Plant 173
 - Plant Reliability 173
 - Endurance 173
 - Performance Limitations..... 173
 - External Influences..... 173
 - Physical Environment 173
 - Operating Practices 173
 - Qualification of Function 173
 - Manufacture, Storage, and Installation 173

Specification and Design.....	174
Contributory Factors	174
Proposal of Solutions.....	174
Tables.....	174
Management of the Incident Investigation Process	174
Fault Trees	179
Introduction.....	179
Construction of the Fault Tree	179
Ishikawa Diagrams	181
Causes	182
Questions to Be Asked While Building a Fishbone Diagram.....	183
Criticism of the Ishikawa Technique.....	184
Kipling's Serving-Men	185
Apollo Root Cause Analysis—Dean L Gano	185
Causal Relationship Methods	185
The Nature of Failure.....	186
Notes.....	242

Chapter 6 Other Techniques Essential for Modern Reliability

Management I.....	243
Introduction	243
Configuration Management.....	243
Flavours of CM: CMI versus CMII.....	244
Preventive Maintenance	245
Predictive Maintenance	246
Information.....	246
The Human Factor.....	246
A Case Study of Poor CM	247
Software for CM.....	247
A Final Note.....	247
Codification and Coding Systems	248
The History of Coding.....	248
Coding Systems	248
Linnaeus	248
Dewey Decimal Classification System.....	248
UNSPSC.....	249
Engineering Codification.....	249
The History of the NATO Coding System.....	250
Nations Using the Code	251
Standardised Long Description.....	252
Standardised Short Description	252
Technical Dictionaries	253
Advantages of the NATO System	253
Master Data	253
ISO 22745: Standard-Based Exchange of Product Data	254

Non-Military Applications of Master Data.....	254
Coding by Colour or Stamping.....	254
Modern Trends in Codification.....	255
Lubrication	255
Manufacture of Lubricants	256
Tribology	259
The Requisite Qualities of a Lubricant.....	259
Friction	259
Wear.....	260
Lubrication	260
Hydrodynamic Lubrication	261
Thin-Film or Mixed Lubrication	261
Boundary Lubrication.....	261
Elasto-Hydrodynamic Lubrication	262
Lubricant Selection.....	262
Lubricant Properties	262
Viscosity Measurement	262
Absolute Viscosity	263
Kinematic Viscosity	263
The Role of Additives.....	264
Different Lubricants for Different Applications.....	266
Hydraulic Oils	266
Turbine Oils	267
Gear Oils.....	267
Compressor Oils	268
Wire Rope Lubricants.....	269
Biodegradable Lubricants.....	269
Greases	269
Grease Tests	270
Other Tests for Greases.....	271
Compatibility	271
A Case Study in Lubricant Application.....	271
Reverse Engineering.....	271
Regression Analysis.....	274
Using the Regression Equation.....	275
Correlation	275
Confidence Limits	276
Analysis of Variance	278
Analysis of Variance Report.....	278
Note	279

Chapter 7 Other Techniques Essential for Modern Reliability	
Management II	281
Systems Engineering	281
Optimisation	281
Interface Management.....	282

The Systems Engineering Approach	282
Systems Engineering Design	282
Systems Engineers.....	282
Systems Engineering Organisation	283
Financial Optimisation	283
Features of Investment Projects.....	284
Payback.....	284
Discounted Cash Flow	284
Internal Rate of Return	285
Profitability Index	285
Calculations	286
Class Assignment.....	286
Determination of the Discount Rate	286
Handling Inflation	287
Handling Tax.....	288
System Modelling	301
Simulation.....	301
Simulation Example: Stock Control	302
Class Assignment.....	305
Monte Carlo Simulation Using Random Number Generation.....	305
Assignment	307
Linear Programming.....	309
History of Linear Programming.....	309
Two-Dimensional Linear Programming	309
Assignment.....	313
Model Assumptions.....	316
Parameters Required.....	316
Assignment.....	317
Other System Engineering Concerns.....	317
Design for Operability	317
An Example of Poor Operability	317
Operability Concerns: Human Physical Dimensions.....	318
Strength Requirements.....	318
Job Design.....	318
Human Sensory Factors: Vision.....	319
Other Factors to Be Considered.....	320
Design for Supportability: The Concept of Integrated Logistic Support.....	320
Queuing Theory	320
Single-Line Queuing with Single-Service Channel	321
Single-Line Queuing with Two Service Bays.....	322
Project Management	323
The Work Breakdown Structure	324
The Critical Path Network	324
Activity on Arrow	325

Project Budgeting and the S Curve.....	325
Resource Allocation.....	326
Chapter 8 Reliability Management	327
Introduction	327
The Management Process.....	327
What It Takes to Be a Manager	328
A History of Management Thought	328
Writers on Management	328
Mary Parker Follett	328
Henri Fayol	328
Frederick Winslow Taylor.....	330
Elton Mayo	331
Douglas MacGregor.....	331
Frederick Herzberg	331
Peter Drucker	333
J. Edwards Deming	333
The Characteristics of a Successful Manager.....	335
The Management Triangle.....	335
The Management Process.....	336
The Characteristics of a Successful Reliability Engineer	336
The Characteristics of a Successful Reliability Engineering Manager.....	337
Stress in Management	337
Communication	337
Readings in Reliability Management	338
Introduction	338
Reading #1: Human Error in Maintenance and Reliability and What to Do about It (Also Known as Rules, Tools, and Schools)	338
Jack Nicholas Jr	338
Assignment	338
Introduction.....	338
Concept #1: Exercise and Practice Leadership as Well as Management	339
Concept #2: Look First at “Programmatic” Rather Than “Technical” Solutions to Reliability Problems.....	340
Concept #3: Look for Indicators of Small, Seemingly Insignificant, but Repetitious Reliability Problems and Act on the Findings.....	342
Concept #4: Don’t Be Afraid of Mistakes; Learn from Them.....	343
Adopt a No-Fault Policy	343
Adopt a Compliance Policy	344
Practise Peer Review.....	344

Practise Focusing on the Incident at Hand while It Is Being Investigated.....	344
Concept #5: Become a Procedure-Based Organisation, but Don't Overdo It	345
Concept #6: Eliminate as Much Maintenance as Possible and Increase Emphasis on Reliability	348
Concept #7: Don't Forget the Roots of Your M&R Programme Initiatives for Improvement	350
Conclusions	351
Reading #2: Why Managers Don't Endorse Reliability Initiatives	352
Winston Ledet.....	352
Notes.....	355
Chapter 9 Design Issues in Reliability Engineering and Maintenance	357
Introduction	357
Factors of Safety and Probabilistic Design	357
Two Cases with the Same Safety Margin	359
This Concept Is Shown in Figure 9.5	360
Computers in Reliability Engineering and Maintenance	362
Computer Programs Used in Hardware Design	362
Computer Programs Used in the Testing Phase	363
Computer Programs Used in the Systems Engineering Phase of a System Design.....	363
Computer Programs Used in the Middle of the Life Cycle	364
Assignment 9.1	364
Assignment 9.2.....	364
Chapter 10 Maintenance Planning and Scheduling.....	369
Maintenance Planning and Scheduling	369
The History of Maintenance.....	369
No Easy Task	369
Preparation for Maintenance Planning and Scheduling	370
10.1 Maintenance Key Performance Indicators.....	370
10.2 Maintenance Costing System	371
10.3 Wrench Time	371
Maintenance Policy Document.....	371
CMMS	371
Maintenance Plan	371
Maintenance Budget.....	371
The Importance of the Planners and Schedulers	371
The Maintenance Planning Process (As Undertaken by the Planning Department).....	372

Maintenance Scheduling (As Undertaken by the Maintenance Planner and Scheduler)	372
Case Studies in Maintenance Planning and Scheduling	372
Outage Management	372
Requirements Planning	372
Man-Hours Required	373
The Master Schedule	373
Plannable Work Hours	374
Equipment Utilisation	376
The Draft Master Schedule	376
Delay Report	376
The Review Meeting	376
The Official Master Schedule	377
Job Cards	378
 Chapter 11 ISO 55000	 379
Prelude: Standardisation	379
Standardisation: A Short History	379
The Organisation	381
Leadership	381
Planning	381
Support	382
Operations	382
Performance Evaluation	382
Improvement	382
Case 11.1	382
ISO 55000 Pre-Audit	382
Model Audit Book	383
Possible Grand Total (Sections 1–14)	396
 Appendix 1: The Standard Normal Distribution	 399
Appendix 2: A Perspective on Robert Lusser	401
<i>Reid Collins</i>	
 References	 403
Index	405
