<i>Preface</i>	v
Chapter 1 Sources of radiation	1
Natural radioactivity	1
Nuclear reactors	3
Artificial radioactivity	5
Machine sources	8
<i>Van de Graaff accelerator</i>	9
<i>Cyclotron</i>	9
<i>Resonant transformer</i>	11
<i>Microwave linear accelerator</i>	12
<i>Dynamitron</i>	14
<i>Pulsed field emission machine</i>	14
<i>Other accelerators</i>	14
Radiation in space	14
Problems	16
References	17
Chapter 2 Absorption of radiation in matter	18
X- and γ -rays	18
<i>Photoelectric absorption</i>	18
<i>Compton scattering</i>	21
<i>Pair production</i>	22
<i>Total absorption coefficient</i>	23
<i>Other processes</i>	25

Fast electrons	25
<i>Excitation and ionization</i>	25
<i>Stopping power and linear energy transfer</i>	27
<i>Other modes of interaction</i>	29
Heavy particles	30
<i>Charged particles</i>	30
<i>Neutrons</i>	34
Nuclear transformations	35
Comparison of the effects produced by different types of radiation	36
Problems	37
References	38
 Chapter 3	 Radiation dose and its measurement
Units	40
<i>Yield</i>	40
<i>The rad</i>	41
<i>The roentgen</i>	41
<i>Meaning of the roentgen</i>	41
<i>Other units</i>	42
Measurement of absorbed dose	43
<i>Calorimetry</i>	44
<i>Ionization in gases</i>	46
<i>Chemical methods</i>	49
<i>Solid state methods</i>	52
<i>Charge collection</i>	53
<i>Counting methods</i>	54
Measurement of fluence or flux density	55
Personnel dosimetry	56
Problems	57
References	58
 Chapter 4	 Short-lived intermediates
Production of intermediates in the primary activation	59
Excited species	64
<i>Unimolecular processes</i>	65
<i>Bimolecular processes</i>	67
Ions	71
<i>Positive ions</i>	71
<i>Electrons</i>	77
<i>Neutralization</i>	79
Free radicals	80

<i>Contents</i>	<i>ix</i>
Direct study of intermediates	83
<i>Electron spin resonance</i>	84
<i>Mass spectrometry and related techniques</i>	86
<i>Pulse radiolysis</i>	90
Problems	94
References	95
Chapter 5 Inorganic solids	98
Stored energy	99
Electrical conductivity	102
<i>Metals</i>	102
<i>Semiconductors</i>	103
<i>Insulators</i>	104
Thermal conductivity	104
Dimensional changes	105
Order-disorder changes in alloys	107
Phase changes	107
Mechanical properties	108
Colour changes	109
<i>Alkali halides</i>	109
<i>Glass and quartz</i>	111
<i>Ice</i>	112
Chemical decomposition	113
Surface reactions	114
Problems	114
References	115
Chapter 6 Gases	117
Hydrogen	118
Oxygen	121
Water vapour	122
Nitrogen and Compounds of Nitrogen	124
<i>Ammonia</i>	124
<i>Mixtures of nitrogen and oxygen</i>	125
<i>Nitrous oxide</i>	125
Oxides of carbon	126
<i>Carbon monoxide</i>	126
<i>Carbon dioxide</i>	126
Methane	127
Ethylene	131
Other gases	132
Problems	133
References	134

Chapter 7	Water and aqueous solutions	136
Experimental facts		136
Intermediates in the radiolysis of water		137
Yields of intermediates		142
Properties and reactions of the intermediates		147
<i>Hydrated electrons</i>		147
<i>Hydroxyl radicals</i>		151
<i>Hydrogen atoms</i>		152
<i>Perhydroxyl radicals</i>		153
Explanation of the experimental facts in the radiolysis of water		155
Dilute ferrous sulphate solutions		156
Other dilute solutions		160
Concentrated solutions		162
Problems		163
References		164
Chapter 8	Organic compounds	167
Saturated hydrocarbons		167
<i>Ions</i>		168
<i>Free radicals</i>		172
<i>Products</i>		174
Unsaturated hydrocarbons		181
<i>Intermediates</i>		181
<i>Products</i>		182
Aromatic hydrocarbons		185
<i>Excited states</i>		185
<i>Ions and free radicals</i>		189
<i>Products</i>		190
Alcohols		193
<i>Intermediates</i>		193
<i>Products</i>		195
Other organic compounds		197
Problems		197
References		198
Chapter 9	Polymeric systems	202
Polymerization		202
<i>Reaction mechanism</i>		203
<i>Kinetics of free radical polymerization in the liquid phase</i>		204
<i>The gel effect</i>		207
<i>Kinetics of ionic polymerization in the liquid phase</i>		208
<i>Polymerization in the solid state</i>		209
<i>Polymerization under complex conditions</i>		211

<i>Contents</i>	xi
Polymers	212
<i>Chemical changes in irradiated polymers</i>	212
<i>Mechanism of the changes in polymers</i>	216
<i>Effect of various substances on the chemical changes in irradiated polymers</i>	217
<i>Physical changes in irradiated polymers</i>	219
Graft polymerization	225
Problems	226
References	227
 Chapter 10	
Substances of biological interest	230
Carbohydrates	231
Polysaccharides	233
Amino acids and peptides	234
Thiols and disulphides	238
Proteins	241
Electron transport systems	248
Nucleic acids and their components	250
Lipids	254
Effects in organized biological systems	255
Problems	256
References	257
 Appendix	
Units and conversion factors	260
<i>Index</i>	263
