	<i>page</i>
Preface	v
List of Coloured Plates	xiii
List of Numbered Illustrations	xv, xvi
Introduction	1, 2
SECTION I	
<i>By Prof. J. G. Feinberg and Dr. I. Smith</i>	
Chromatography—A brief history	3, 4
Principles of Chromatography	5-19
Why Paper Chromatography?	5
What is Paper Chromatography?	6, 7
A Resultant of Forces	7, 8
The Propelling Forces: solvent flow; solubility	8, 9
The Retarding Forces: adsorption; partition; countercurrent distribution	10, 15
Paper Chromatography as a Countercurrent Distribution Phenomenon: Equilibration	15-18
Design of a Chromatographic Solvent	18, 19
Practice of Paper Chromatography	20-36
Ascending Chromatography: apparatus and method —mechanics; apparatus; paper; solvent; applica- tion of sample; operation; drying; locating	20-25
Descending Chromatography: apparatus and method —mechanics; apparatus; paper; solvent; applica- tion of sample; operation; drying; locating	25-30
Choice of technique	30
R_f value	30-32
Two-way Chromatography: method	32-35
Preserving Records	35, 36

CONTENTS

	<i>page</i>
Experiments in Paper Chromatography	37-113

Section Ia: Basic

Expt. C1	Ascending: separation of ink pigments	37-39
Expt. C2	Ascending: separation of pH indicators	40, 41
Expt. C3	Descending: separation of inks and indicators	42, 43
Expt. C4	R_f value calculation	44
Expt. C5	Ascending two-way: separation of ink pigments	45-47
Expt. C6a	Locating exercise, colourless substances	48
Expt. C6b	Ascending or descending: group 3B metals separation	49-51
Expt. C6c	Ascending: group 2A metals separation	52, 53

Section Ib: Organic and Biological

Expt. C7	Ascending two-way: separation of chlorophylls and carotenes	54-56
Expt. C8	Ascending or descending: separation of amino acids	57, 58
Expt. C9	Ascending or descending: amino acids in fruit juices; multiple locating reagents	59-61
Expt. C10	Ascending two-way: amino acids in fruit juices	62, 63
Expt. C11	Ascending or descending: separation of sugars; determination of R_g values	64-66
Expt. C12	Ascending or descending: recovery by 'elution'	67, 68
Expt. C14	Ascending or descending: 'salt effect'	69, 70
Expt. C15	Ascending or descending: desalting	71, 72
Expt. C16	Ascending: drosophila pigments	73, 74
Expt. C17	Ascending: anthocyanins from flowers	75, 76

Section Ic: Inorganic

(Qualitative analysis of inorganic ions)

By Dr. F. H. Pollard and Dr. G. Nickless

Introduction	77, 78
Mechanics	78, 79

CONTENTS

	<i>page</i>
Experiments	
Expt. C20 Separation of anions—the halides	80, 81
Expt. C21 Separation of phosphorus-containing anions	82, 83
Expt. C22 Analysis of coin for Cu and Ni	84, 85
Expt. C23 Separation of metal ions from three groups	86, 87
Expt. C24 Identification of an unknown mixture (exercise)	88, 89
Expt. C25 Group 1: the silver group,	90, 91
Expt. C26 Group 2A: the copper group	92, 93
Expt. C27 Group 2B: the arsenic group	94, 95
Expt. C28 Group 3A: the iron group	96, 97
Expt. C29 Group 3B: the nickel group	98, 99
Expt. C30 Group 4: the calcium group	100
Expt. C31 Group 5: the potassium group Cations, R_f values	101, 102 103
Expt. C32 Groups 1–5: Comprehensive scheme	104–109
Expt. C33 Ion Exchange removal of interfering anions from solution (subsidiary experiment)	110–113

SECTION II

By Prof. J. G. Feinberg and Dr. I. Smith

Electrophoresis—A brief history	114
Principles of Paper Electrophoresis	115–124
Why Paper Electrophoresis?	115, 116
What is Paper Electrophoresis?	116–119
A Resultant of Forces	119, 120
Additional Factors Affecting Separation:	120–124
applied voltage and heating effect	120–122
buffer concentration	122
buffer pH	122
electro-osmotic effect	122, 123
diffusion effect	123, 124
Migration velocity	124
Power Supplies	124

CONTENTS

	<i>page</i>
Practice of Paper Electrophoresis	125-131
Mechanics	125
Apparatus; paper; electrode assembly	125-128
Application of sample	128, 129
Operation	130
Two-Way Separations	130, 131
Chromatography-Electrophoresis	131
Electrophoresis-Chromatography	131
Experiments in Paper Electrophoresis	132-154
<i>Basic</i>	
Expt. E1 Separation of inks, dyes and indicators	132-135
Expt. E2 Separation and recovery of indicators	136, 137
Expt. E3 Separation of amino acids: variation of buffer pH	138, 139
Expt. E4 Separation of fruit juice amino acids	140, 141
<i>Supplementary</i>	
Expt. E5 Chromatography-Electrophoresis, two-way: separation of ink pigments	142, 143
Expt. E6 Electrophoresis-Chromatography, two-way: separation of amino acids	144, 145
Expt. E7 Separation of serum proteins	146-148
Expt. E8 Determination of isoelectric pH of a protein	149-152
Expt. E9 Separation of cations, the metals of group 3B	153, 154

SECTION III

By Dr. I. Smith and Mrs. M. Smith

Thin Layer Chromatography (TLC)—a brief history	155, 156
Principles of Thin Layer Chromatography	157, 158
Why Thin Layer Chromatography ?	157
What is Thin Layer Chromatography ?	158
A Resultant of Forces	158

CONTENTS

	<i>page</i>
Practice of Thin Layer (Ascending) Chromatography	159-172
(a) Mechanics—apparatus; preparation of layered plates and slides	159-166
(b) Mechanics—apparatus; application of sample; operation; drying; locating; preserving records: Slides, Part Q	166-172
Experiments in Thin Layer Chromatography	173-202
Expt. T1 Separation of ink pigments	174, 175
Expt. T2 Two-way: separation of ink pigments	176, 177
Expt. T3 Recovery by elution	178, 179
Expt. T4 Separation of amino acids	180, 181
Expt. T5 R_f determination	182
Expt. T6 Two-way: separation of plastid pigments	183, 184
Expt. T7 Separation of anthocyanin pigments	185
Expt. T8 Separation of lipids into classes	186-189
Expt. T9 Recovery of lipid classes	190, 191
Expt. T10 Separation of individual triglycerides	192, 193
Expt. T11 Separation of cholesterol esters	194, 195
Expt. T12 Separation of halide ions	196, 197
Expt. T13 Investigation of factors affecting chromatography	198, 199
Expt. T14 A research problem	200-202

APPENDIX

Book and Film List	203, 204
Chemicals and Reagents	
Solvents: buffers: locating reagents: stains, etc.	205-214
Index	215-223
