<b>Preface</b>	<b>xiii</b>	3.6 Nonlinear Programming	45
<b>Acknowledgements</b>	<b>xv</b>	3.7 Profile Optimization	46
<b>Nomenclature</b>	<b>xvii</b>	3.8 Structural Optimization	48
<b>Chapter 1 The Nature of Chemical Process Design and Integration</b>	<b>1</b>	3.9 Solution of Equations using Optimization	52
1.1 Chemical Products	1	3.10 The Search for Global Optimality	53
1.2 Formulation of the Design Problem	3	3.11 Summary – Optimization	54
1.3 Chemical Process Design and Integration	4	3.12 Exercises	54
1.4 The Hierarchy of Chemical Process Design and Integration	5	References	56
1.5 Continuous and Batch Processes	9	<b>Chapter 4 Thermodynamic Properties and Phase Equilibrium</b>	<b>57</b>
1.6 New Design and Retrofit	10	4.1 Equations of State	57
1.7 Approaches to Chemical Process Design and Integration	11	4.2 Phase Equilibrium for Single Components	59
1.8 Process Control	13	4.3 Fugacity and Phase Equilibrium	60
1.9 The Nature of Chemical Process Design and Integration – Summary	14	4.4 Vapor–Liquid Equilibrium	60
References	14	4.5 Vapor–Liquid Equilibrium Based on Activity Coefficient Models	62
<b>Chapter 2 Process Economics</b>	<b>17</b>	4.6 Vapor–Liquid Equilibrium Based on Equations of State	64
2.1 The Role of Process Economics	17	4.7 Calculation of Vapor–Liquid Equilibrium	64
2.2 Capital Cost for New Design	17	4.8 Liquid–Liquid Equilibrium	70
2.3 Capital Cost for Retrofit	23	4.9 Liquid–Liquid Equilibrium Activity Coefficient Models	71
2.4 Annualized Capital Cost	24	4.10 Calculation of Liquid–Liquid Equilibrium	71
2.5 Operating Cost	25	4.11 Calculation of Enthalpy	72
2.6 Simple Economic Criteria	28	4.12 Calculation of Entropy	74
2.7 Project Cash Flow and Economic Evaluation	29	4.13 Phase Equilibrium and Thermodynamic Properties – Summary	74
2.8 Investment Criteria	30	4.14 Exercises	74
2.9 Process Economics – Summary	31	References	76
2.10 Exercises	32	<b>Chapter 5 Choice of Reactor I – Reactor Performance</b>	<b>77</b>
References	33	5.1 Reaction Path	77
<b>Chapter 3 Optimization</b>	<b>35</b>	5.2 Types of Reaction Systems	78
3.1 Objective Functions	35	5.3 Reactor Performance	81
3.2 Single-variable Optimization	37	5.4 Rate of Reaction	82
3.3 Multivariable Optimization	38	5.5 Idealized Reactor Models	83
3.4 Constrained Optimization	42	5.6 Choice of Idealized Reactor Model	90
3.5 Linear Programming	43	5.7 Choice of Reactor Performance	94

5.8 Choice of Reactor			
Performance – Summary	94		
5.9 Exercises	95		
References	96		
<b>Chapter 6 Choice of Reactor II - Reactor Conditions</b>	<b>97</b>		
6.1 Reaction Equilibrium	97		
6.2 Reactor Temperature	100		
6.3 Reactor Pressure	107		
6.4 Reactor Phase	108		
6.5 Reactor Concentration	109		
6.6 Biochemical Reactions	114		
6.7 Catalysts	114		
6.8 Choice of Reactor			
Conditions – Summary	117		
6.9 Exercises	118		
References	120		
<b>Chapter 7 Choice of Reactor III – Reactor Configuration</b>	<b>121</b>		
7.1 Temperature Control	121		
7.2 Catalyst Degradation	123		
7.3 Gas–Liquid and Liquid–Liquid Reactors	124		
7.4 Reactor Configuration	127		
7.5 Reactor Configuration for Heterogeneous Solid-Catalyzed Reactions	133		
7.6 Reactor Configuration from Optimization of a Superstructure	133		
7.7 Choice of Reactor			
Configuration – Summary	139		
7.8 Exercises	139		
References	140		
<b>Chapter 8 Choice of Separator for Heterogeneous Mixtures</b>	<b>143</b>		
8.1 Homogeneous and Heterogeneous Separation	143		
8.2 Settling and Sedimentation	143		
8.3 Inertial and Centrifugal Separation	147		
8.4 Electrostatic Precipitation	149		
8.5 Filtration	150		
8.6 Scrubbing	151		
8.7 Flotation	152		
8.8 Drying	153		
8.9 Separation of Heterogeneous Mixtures – Summary	154		
8.10 Exercises	154		
References	155		
<b>Chapter 9 Choice of Separator for Homogeneous Fluid Mixtures I – Distillation</b>		<b>157</b>	
9.1 Single-Stage Separation		157	
9.2 Distillation		157	
9.3 Binary Distillation		160	
9.4 Total and Minimum Reflux Conditions for Multicomponent Mixtures		163	
9.5 Finite Reflux Conditions for Multicomponent Mixtures		170	
9.6 Choice of Operating Conditions		175	
9.7 Limitations of Distillation		176	
9.8 Separation of Homogeneous Fluid Mixtures by Distillation – Summary		177	
9.9 Exercises		178	
References		179	
<b>Chapter 10 Choice of Separator for Homogeneous Fluid Mixtures II – Other Methods</b>		<b>181</b>	
10.1 Absorption and Stripping		181	
10.2 Liquid–Liquid Extraction		184	
10.3 Adsorption		189	
10.4 Membranes		193	
10.5 Crystallization		203	
10.6 Evaporation		206	
10.7 Separation of Homogeneous Fluid Mixtures by Other Methods – Summary		208	
10.8 Exercises		209	
References		209	
<b>Chapter 11 Distillation Sequencing</b>		<b>211</b>	
11.1 Distillation Sequencing Using Simple Columns		211	
11.2 Practical Constraints Restricting Options		211	
11.3 Choice of Sequence for Simple Nonintegrated Distillation Columns		212	
11.4 Distillation Sequencing Using Columns With More Than Two Products		217	
11.5 Distillation Sequencing Using Thermal Coupling		220	
11.6 Retrofit of Distillation Sequences		224	
11.7 Crude Oil Distillation		225	
11.8 Distillation Sequencing Using Optimization of a Superstructure		228	
11.9 Distillation Sequencing – Summary		230	
11.10 Exercises		231	
References		232	

<b>Chapter 12 Distillation Sequencing for Azeotropic Distillation</b>	<b>235</b>	14.6 Production Schedules for Multiple Products	305
12.1 Azeotropic Systems	235	14.7 Equipment Cleaning and Material Transfer	306
12.2 Change in Pressure	235	14.8 Synthesis of Reaction and Separation Systems for Batch Processes	307
12.3 Representation of Azeotropic Distillation	236	14.9 Optimization of Batch Processes	311
12.4 Distillation at Total Reflux Conditions	238	14.10 Storage in Batch Processes	312
12.5 Distillation at Minimum Reflux Conditions	242	14.11 Reaction and Separation Systems for Batch Processes – Summary	313
12.6 Distillation at Finite Reflux Conditions	243	14.12 Exercises	313
12.7 Distillation Sequencing Using an Entrainer	246	References	315
12.8 Heterogeneous Azeotropic Distillation	251	<b>Chapter 15 Heat Exchanger Networks I – Heat Transfer Equipment</b>	<b>317</b>
12.9 Entrainer Selection	253	15.1 Overall Heat Transfer Coefficients	317
12.10 Trade-offs in Azeotropic Distillation	255	15.2 Heat Transfer Coefficients and Pressure Drops for Shell-and-Tube Heat Exchangers	319
12.11 Multicomponent Systems	255	15.3 Temperature Differences in Shell-and-Tube Heat Exchangers	324
12.12 Membrane Separation	255	15.4 Allocation of Fluids in Shell-and-Tube Heat Exchangers	329
12.13 Distillation Sequencing for Azeotropic Distillation – Summary	256	15.5 Extended Surface Tubes	332
12.14 Exercises	257	15.6 Retrofit of Heat Exchangers	333
References	258	15.7 Condensers	337
<b>Chapter 13 Reaction, Separation and Recycle Systems for Continuous Processes</b>	<b>259</b>	15.8 Reboilers and Vaporizers	342
13.1 The Function of Process Recycles	259	15.9 Other Types of Heat Exchange Equipment	346
13.2 Recycles with Purges	264	15.10 Fired Heaters	348
13.3 Pumping and Compression	267	15.11 Heat Transfer Equipment – Summary	354
13.4 Simulation of Recycles	276	15.12 Exercises	354
13.5 The Process Yield	280	References	356
13.6 Optimization of Reactor Conversion	281	<b>Chapter 16 Heat Exchanger Networks II – Energy Targets</b>	<b>357</b>
13.7 Optimization of Processes Involving a Purge	283	16.1 Composite Curves	357
13.8 Hybrid Reaction and Separation	284	16.2 The Heat Recovery Pinch	361
13.9 Feed, Product and Intermediate Storage	286	16.3 Threshold Problems	364
13.10 Reaction, Separation and Recycle Systems for Continuous Processes – Summary	288	16.4 The Problem Table Algorithm	365
13.11 Exercises	289	16.5 Nonglobal Minimum Temperature Differences	370
References	290	16.6 Process Constraints	370
<b>Chapter 14 Reaction, Separation and Recycle Systems for Batch Processes</b>	<b>291</b>	16.7 Utility Selection	372
14.1 Batch Processes	291	16.8 Furnaces	374
14.2 Batch Reactors	291	16.9 Cogeneration (Combined Heat and Power Generation)	376
14.3 Batch Separation Processes	297	16.10 Integration Of Heat Pumps	381
14.4 Gantt Charts	303	16.11 Heat Exchanger Network Energy Targets – Summary	383
14.5 Production Schedules for Single Products	304		

16.12 Exercises	383	<b>Chapter 20 Heat Integration of Reactors</b>	<b>439</b>
References	385	20.1 The Heat Integration Characteristics of Reactors	439
<b>Chapter 17 Heat Exchanger Networks III – Capital and Total Cost Targets</b>	<b>387</b>	20.2 Appropriate Placement of Reactors	441
17.1 Number of Heat Exchange Units	387	20.3 Use of the Grand Composite Curve for Heat Integration of Reactors	442
17.2 Heat Exchange Area Targets	388	20.4 Evolving Reactor Design to Improve Heat Integration	443
17.3 Number-of-shells Target	392	20.5 Heat Integration of Reactors – Summary	444
17.4 Capital Cost Targets	393	Reference	444
17.5 Total Cost Targets	395	<b>Chapter 21 Heat Integration of Distillation Columns</b>	<b>445</b>
17.6 Heat Exchanger Network and Utilities Capital and Total Costs – Summary	395	21.1 The Heat Integration Characteristics of Distillation	445
17.7 Exercises	396	21.2 The Appropriate Placement of Distillation	445
References	397	21.3 Use of the Grand Composite Curve for Heat Integration of Distillation	446
<b>Chapter 18 Heat Exchanger Networks IV – Network Design</b>	<b>399</b>	21.4 Evolving the Design of Simple Distillation Columns to Improve Heat Integration	447
18.1 The Pinch Design Method	399	21.5 Heat Pumping in Distillation	449
18.2 Design for Threshold Problems	404	21.6 Capital Cost Considerations	449
18.3 Stream Splitting	405	21.7 Heat Integration Characteristics of Distillation Sequences	450
18.4 Design for Multiple Pinches	408	21.8 Heat-integrated Distillation Sequences Based on the Optimization of a Superstructure	454
18.5 Remaining Problem Analysis	411	21.9 Heat Integration of Distillation Columns – Summary	455
18.6 Network Optimization	413	21.10 Exercises	456
18.7 The Superstructure Approach to Heat Exchanger Network Design	416	References	457
18.8 Retrofit of Heat Exchanger Networks	419	<b>Chapter 22 Heat Integration of Evaporators and Dryers</b>	<b>459</b>
18.9 Addition of New Heat Transfer Area in Retrofit	424	22.1 The Heat Integration Characteristics of Evaporators	459
18.10 Heat Exchanger Network Design – Summary	425	22.2 Appropriate Placement of Evaporators	459
18.11 Exercises	425	22.3 Evolving Evaporator Design to Improve Heat Integration	459
References	428	22.4 The Heat Integration Characteristics of Dryers	459
<b>Chapter 19 Heat Exchanger Networks V – Stream Data</b>	<b>429</b>	22.5 Evolving Dryer Design to Improve Heat Integration	460
19.1 Process Changes for Heat Integration	429	22.6 Heat Integration of Evaporators and Dryers – Summary	461
19.2 The Trade-Offs Between Process Changes, Utility Selection, Energy Cost and Capital Cost	429		
19.3 Data Extraction	430		
19.4 Heat Exchanger Network Stream Data – Summary	437		
19.5 Exercises	437		
References	438		

22.7 Exercises	462	25.2 Sources of Atmospheric Pollution	552
References	463	25.3 Control of Solid Particulate Emissions to Atmosphere	553
<b>Chapter 23 Steam Systems and Cogeneration</b>	<b>465</b>	25.4 Control of VOC Emissions to Atmosphere	554
23.1 Boiler Feedwater Treatment	466	25.5 Control of Sulfur Emissions	565
23.2 Steam Boilers	468	25.6 Control of Oxides of Nitrogen Emissions	569
23.3 Steam Turbines	471	25.7 Control of Combustion Emissions	573
23.4 Gas Turbines	477	25.8 Atmospheric Dispersion	574
23.5 Steam System Configuration	482	25.9 Environmental Design for Atmospheric Emissions – Summary	575
23.6 Steam and Power Balances	484	25.10 Exercises	576
23.7 Site Composite Curves	487	References	579
23.8 Cogeneration Targets	490		
23.9 Optimization of Steam Levels	493		
23.10 Site Power-to-heat Ratio	496		
23.11 Optimizing Steam Systems	498		
23.12 Steam Costs	502	<b>Chapter 26 Water System Design</b>	<b>581</b>
23.13 Choice of Driver	506	26.1 Aqueous Contamination	583
23.14 Steam Systems and Cogeneration – Summary	507	26.2 Primary Treatment Processes	585
23.15 Exercises	508	26.3 Biological Treatment Processes	588
References	510	26.4 Tertiary Treatment Processes	591
		26.5 Water Use	593
<b>Chapter 24 Cooling and Refrigeration Systems</b>	<b>513</b>	26.6 Targeting Maximum Water Reuse for Single Contaminants	594
24.1 Cooling Systems	513	26.7 Design for Maximum Water Reuse for Single Contaminants	596
24.2 Recirculating Cooling Water Systems	513	26.8 Targeting and Design for Maximum Water Reuse Based on Optimization of a Superstructure	604
24.3 Targeting Minimum Cooling Water Flowrate	516	26.9 Process Changes for Reduced Water Consumption	606
24.4 Design of Cooling Water Networks	518	26.10 Targeting Minimum Wastewater Treatment Flowrate for Single Contaminants	607
24.5 Retrofit of Cooling Water Systems	524	26.11 Design for Minimum Wastewater Treatment Flowrate for Single Contaminants	610
24.6 Refrigeration Cycles	526	26.12 Regeneration of Wastewater	613
24.7 Process Expanders	530	26.13 Targeting and Design for Effluent Treatment and Regeneration Based on Optimization of a Superstructure	616
24.8 Choice of Refrigerant for Compression Refrigeration	532	26.14 Data Extraction	617
24.9 Targeting Refrigeration Power for Compression Refrigeration	535	26.15 Water System Design – Summary	620
24.10 Heat Integration of Compression Refrigeration Processes	539	26.16 Exercises	620
24.11 Mixed Refrigerants for Compression Refrigeration	542	References	623
24.12 Absorption Refrigeration	544		
24.13 Indirect Refrigeration	546		
24.14 Cooling Water and Refrigeration Systems – Summary	546		
24.15 Exercises	547		
References	549	<b>Chapter 27 Inherent Safety</b>	<b>625</b>
		27.1 Fire	625
<b>Chapter 25 Environmental Design for Atmospheric Emissions</b>	<b>551</b>	27.2 Explosion	626
25.1 Atmospheric Pollution	551	27.3 Toxic Release	627
		27.4 Intensification of Hazardous Materials	628

27.5 Attenuation of Hazardous Materials	630	B.2 Centrifugal Compressors	658
27.6 Quantitative Measures of Inherent Safety	631	B.3 Staged Compression	659
27.7 Inherent Safety – Summary	632		
27.8 Exercises	632	<b>Appendix C Heat Transfer Coefficients and Pressure Drop in Shell-and-tube Heat Exchangers</b>	<b>661</b>
References	633		
<b>Chapter 28 Clean Process Technology</b>	<b>635</b>	C.1 Pressure Drop and Heat Transfer Correlations for the Tube-Side	661
28.1 Sources of Waste from Chemical Production	635	C.2 Pressure Drop and Heat Transfer Correlations for the Shell-Side	662
28.2 Clean Process Technology for Chemical Reactors	636	References	666
28.3 Clean Process Technology for Separation and Recycle Systems	637	<b>Appendix D The Maximum Thermal Effectiveness for 1–2 Shell-and-tube Heat Exchangers</b>	<b>667</b>
28.4 Clean Process Technology for Process Operations	642		
28.5 Clean Process Technology for Utility Systems	643	<b>Appendix E Expression for the Minimum Number of 1–2 Shell-and-tube Heat Exchangers for a Given Unit</b>	<b>669</b>
28.6 Trading off Clean Process Technology Options	644		
28.7 Life Cycle Analysis	645	<b>Appendix F Algorithm for the Heat Exchanger Network Area Target</b>	<b>671</b>
28.8 Clean Process Technology – Summary	646		
28.9 Exercises	646	<b>Appendix G Algorithm for the Heat Exchanger Network Number of Shells Target</b>	<b>673</b>
References	647		
<b>Chapter 29 Overall Strategy for Chemical Process Design and Integration</b>	<b>649</b>	G.1 Minimum Area Target for Networks of 1–2 Shells	674
29.1 Objectives	649	References	677
29.2 The Hierarchy	649	<b>Appendix H Algorithm for Heat Exchanger Network Capital Cost Targets</b>	<b>677</b>
29.3 The Final Design	651		
<b>Appendix A Annualization of Capital Cost</b>	<b>653</b>	<b>Index</b>	<b>679</b>
<b>Appendix B Gas Compression</b>	<b>655</b>		
B.1 Reciprocating Compressors	655
