Contents

Preface xi

PART I Principles

Chapter 1 – Introduction to Surfaces and Interfaces 3
1.1 Definition of a Surface and an Interface 3
1.2 Liquids and Liquid Surfaces 4
1.3 Surface Area to Volume Ratio 5
1.4 Solids and Solid Surface Roughness 6
1.5 Chemical Heterogeneity of Solid Surfaces 7

Chapter 2 – Molecular Interactions 9
2.1 Intramolecular Forces: Formation of a Molecule by Chemical Bonding 9
2.1.1 Interatomic forces, bonds 9
2.1.2 Molecular geometry 11
2.1.3 Dipole moments 11
2.2 Intermolecular Forces and Potential Energies 18
2.3 Coulomb Interactions 24
2.4 Polar Interactions 27
2.4.1 Interactions between ions and dipolar molecules (fixed and rotating) 27
2.4.2 Interactions between dipolar molecules (fixed) 30
2.4.3 Keesom orientation interactions: interactions between dipolar molecules (rotating) 31
2.5 Induction Effects: Interactions Between Induced Non-polar and Polar Molecules 32
2.5.1 Polarizability of non-polar molecules 32
2.5.2 Polarizability of polar molecules 34
2.5.3 Solvent medium effects and excess polarizabilities 34
2.5.4 Interactions between ions and induced non-polar molecules 35
2.5.5 Interactions between ions and induced polar molecules 36

2.5.6 Interactions between dipolar molecules and induced non-polar molecules (fixed) 37
2.5.7 Debye interactions: interactions between dipolar molecules and induced dipolar molecules (rotating) 37
2.5.8 Unification of angle-averaged induction interactions 38
2.6 van der Waals Interactions 39
2.6.1 London dispersion interactions 40
2.6.2 Correllation with van der Waals constants 43
2.6.3 Comparison of Keesom, Debye and London interactions in polar molecules 46
2.6.4 van der Waals interactions in a medium 47
2.7 Repulsive Interactions, Total Interaction Pair Potentials 48
2.7.1 van der Waals radius 49
2.7.2 Repulsive pair potentials 49
2.7.3 Total intermolecular pair potentials, Mie and Lennard-Jones potentials 50
2.7.4 Application of total intermolecular pair potentials in a liquid medium 51
2.8 Hydrogen-bonding Interactions 52
2.8.1 Properties of hydrogen bonds 54
2.8.2 Hydrogen bonds in water 55
2.9 Hydrophobic and Hydrophilic Interactions 57
2.9.1 Hydrophobic effect 58
2.9.2 Hydrophobic interactions 59
2.9.3 Hydrophilic interactions 60

Chapter 3 – Thermodynamics of Interfaces 62
3.1 Introduction of Thermodynamical Concepts 62
3.1.1 Thermodynamical expressions for closed systems 63
3.1.2 Thermodynamical expressions for open systems 73
3.1.3 Equilibrium between phases in heterogeneous closed systems 78
3.2 Gibbs Dividing Interface 81
3.2.1 Thermodynamical definition of an interface 81
3.2.2 Physical description of a real liquid interface 82
3.2.3 Definitions of surface and interfacial free energy, and surface and interfacial tension 85
3.2.4 Surface free energy and surface tension of liquids 86
3.2.5 Thermodynamics of Gibbs dividing interface and surface excess functions 90
3.3 Thermodynamics of Adsorption 97
3.3.1 Gibbs adsorption isotherm 99
3.3.2 Surface equation of state 102
3.4 Conditions of Equilibrium where Several Surfaces Intersect 102
3.5 Relation of Thermodynamic Parameters with Intermolecular Forces 103
3.5.1 Internal pressure and van der Waals constants 105

3.5.2 Relation of van der Waals constants with molecular pair potentials 106
3.5.3 Cohesive energy and close-packed molecules in condensed systems 109
3.5.4 Derivation of Trouton's rule 111
3.5.5 Molecular interactions at the surface 113

PART II Liquids

Chapter 4 – Pure Liquid Surfaces 117
4.1 What is a Liquid State? 117
4.2 Phase Transition of Pure Liquids 121
4.2.1 Liquid–vapor boundary: vapor pressure change by temperature: Clausius–Clapeyron Equation 123
4.2.2 Liquid–solid boundary 125
4.3 Curved Liquid Surfaces: Young–Laplace Equation 126
4.3.1 Young–Laplace equation from Newton mechanics 127
4.3.2 Young–Laplace equation from curvature 128
4.3.3 Young–Laplace equation from plane geometry 135
4.4 Capillarity 136
4.5 Liquid Surface Tension Variation by Temperature 140
4.6 Parachor 142
4.7 Liquid Surface Tension Variation by Pressure: Kelvin Equation 143
4.8 Capillary Condensation 147
4.9 Nucleation 149
4.9.1 Homogeneous nucleation during a phase transition 150
4.9.2 Rate of homogeneous nucleation 153
4.9.3 Heterogeneous nucleation during a phase transition 154

Chapter 5 – Liquid Solution Surfaces 156
5.1 Equilibrium in Solutions 156
5.2 Mixing and Excess Thermodynamic Functions 158
5.2.1 Mixing of ideal gas and liquid solutions 158
5.2.2 Excess thermodynamic functions 159
5.3 Regular Solutions and Solubility Parameter Approach 161
5.3.1 Cohesive energy density 161
5.3.2 Solubility parameter approach 165
5.3.3 Three-component solubility parameters 166
5.4 Solutions Containing Surface-active Solutes 169
5.4.1 Effect of hydrophilic and hydrophobic group types 171
5.4.2 Types of surfactant 172
5.4.3 HLB method 175
5.5 Gibbs Surface Layers of Soluble Materials on Liquid Solutions 176
5.5.1 Gibbs monolayers: thermodynamics of adsorption 176
5.5.2 Spreading pressure 180
5.5.3 Gaseous monolayers: two-dimensional perfect gas 182

5.5.4 Adsorption on a water surface 186
5.5.5 Adsorption on surfaces other than water 188
5.5.6 Molecular orientation at the interface 189
5.5.7 Marangoni effect 189
5.6 Langmuir Surface Layers of Insoluble Materials on Liquids 190
5.6.1 Spreading of one liquid on another 193
5.6.2 Experimental determination of spreading pressure in monolayers: Langmuir balance 197
5.6.3 Expanded and condensed Langmuir monolayers 199
5.6.4 Monolayers between two immiscible liquids for three-component solutions 201
5.7 Micelles and Critical Micelle Concentration (CMC) 201
5.8 Bilayers, Vesicles, Liposomes, Biological Cell Membranes and Inverted Micelles 207
5.8.1 Bilayers and vesicles 207
5.8.2 Liposomes 208
5.8.3 Biological cell membranes 209
5.8.4 Inverted micelles 210
5.9 Use of Micelles in Emulsion Polymerization 210
5.10 Coating Mono- and Multilayers on Solid Substrates: Langmuir–Blodgett Method 213
5.10.1 Monolayer film transfer to solids 214
5.10.2 Multilayer film transfer to solids 217
5.10.3 Properties of LB films 221

Chapter 6 – Experimental Determination of Surface Tension at Pure Liquid and Solution Surfaces/Interfaces 223
6.1 Liquid Surface Tension from the Capillary Rise Method 223
6.2 Drop Volume and Drop Shape Methods, Video-image Digitization Techniques 231
6.2.1 Drop volume or drop weight method 231
6.2.2 Drop shape method and video-image digitization techniques 234
6.3 Maximum Bubble Pressure Method 234
6.4 Ring, Wilhelmy Plate Detachment and the Height of a Meniscus on a Vertical Plane Methods 236
6.4.1 du Noüy ring method 236
6.4.2 Wilhelmy plate method 238
6.4.3 Height of a meniscus on a vertical plane method 242
6.5 Dynamic Surface Tension Measurement Methods 244
6.5.1 Dynamic maximum bubble pressure method 244
6.5.2 Spinning drop tensiometer method 245
6.6 Methods Applicable to Interfaces Between Two Liquids 246
6.7 Microtensiometry 247
6.7.1 Micropipette tensiometry 247
6.7.2 Atomic force microscopy tensiometry 248
6.8 Measurements on Molten Metals 248
6.9 Surface Tension of Surfactant Solutions 249

Chapter 7 – Potential Energy of Interaction Between Particles and Surfaces 250
7.1 Similarities and Differences Between Intermolecular and Interparticle Forces 250
7.2 Combining Rules for Molecular, Particle and Surface Interactions 252
7.3 van der Waals Interactions Between Macroscopic Bodies 254
7.3.1 Microscopic approach of Hamaker between a molecule and a slab surface 255
7.3.2 Microscopic approach of Hamaker between a spherical particle and a slab surface 257
7.3.3 Microscopic approach of Hamaker between spherical particles 260
7.3.4 Microscopic approach of Hamaker between parallel slab surfaces 261
7.3.5 Microscopic approach of Hamaker between cylinder surfaces 263
7.3.6 Comparison of sphere–surface and sphere–sphere interactions with surface–surface interactions: Langbein approximation 263
7.3.7 Derjaguin approximation 264
7.3.8 Macroscopic approach of Lifshitz 265
7.4 Experimental Measurement of the Hamaker Constant 268
7.5 Relation Between Hamaker Constant and Surface Tension 270
7.6 Solvent Effects on Particle and Surface Interactions 272
7.6.1 Solvent effects on molecular interactions 272
7.6.2 Combining rules for three-component systems: molecules, particles and surfaces in a third medium 273

PART III Solids

Chapter 8 – Solid Surfaces 279
8.1 General Properties of Solid Surfaces and Their Experimental Investigation 279
8.1.1 Properties of solid surfaces 279
8.1.2 Experimental investigation of solid surfaces and the requirement for ultra-high vacuum 281
8.2 Surface Tension, Surface Free Energy and Surface Stress of Solids 284
8.2.1 Surface stress and its relation with surface tension and surface free energy of solid surfaces 284
8.2.2 Theoretical estimation of the surface free energy of solids 285
8.2.3 Experimental determination of surface free energy of solids 287
8.3 Gas Adsorption on Solids 288
8.3.1 Physisorption on a gas–solid interface 289
8.3.2 Chemisorption on a gas–solid interface 290
8.3.3 Thermodynamics of gas adsorption on solids: relation with the Gibbs adsorption equation 291
8.3.4 Experimental determination of adsorption isotherms 293
8.3.5 Types of adsorption isotherm 294
8.3.6 Ideal gas behavior: Henry's law limit 296

8.3.7 Langmuir adsorption isotherm 297
8.3.8 B.E.T. multi-layer adsorption isotherm 300
8.3.9 Other adsorption isotherms 302
8.3.10 Heat of adsorption 303
8.4 Catalytic Activity at Surfaces 305

Chapter 9 – Contact Angle of Liquid Drops on Solids 308
9.1 Definition, Young's Equation and Use of Contact Angles in Industry 308
9.1.1 Theory of contact angles 308
9.1.2 Industrial applications of contact angles 311
9.2 Measurement of Static Contact Angles 312
9.2.1 Direct measurement of static contact angle by video camera or goniometer 313
9.2.2 Captive bubble method 315
9.2.3 Sliding drop on an inclined plate method 316
9.2.4 Drop dimensions method 316
9.2.5 Static Wilhelmy plate method 318
9.3 Dynamic Contact Angle Measurement 318
9.4 Liquid Evaporation Effects During Contact Angle Measurement 321
9.4.1 Receding contact angle determination from drop evaporation 321
9.4.2 Drop evaporation theory for spherical and ellipsoidal drops 321
9.5 Contact Angle of Powders 324
9.6 Contact Angle Hysteresis and its Interpretation 325
9.6.1 Effect of surface roughness 326
9.6.2 Effect of chemical heterogeneity 327
9.6.3 Other reasons for contact angle hysteresis 328
9.7 Temperature Dependence of Contact Angle 329
9.8 Solid Surface Tension Calculations from Contact Angle Results 330
9.8.1 Critical surface tension of solids (Zisman's method) 330
9.8.2 Geometric-mean approach (Fowkes' and later Owens and Wendt's method) 331
9.8.3 Harmonic-mean approach (Wu's method) 333
9.8.4 Equation of state approach (Neumann's method) 333
9.8.5 Acid–base approach (van Oss–Good method) 334

Chapter 10 – Some Applications Involving Solid–Liquid Interfaces 338
10.1 Adsorption from Solution 338
10.1.1 Properties and experimental aspects 338
10.1.2 Composite adsorption isotherms from binary liquid mixtures 339
10.1.3 Individual adsorption isotherms from dilute solutions 341
10.2 Detergency 342
10.2.1 Mechanisms of detergent action 342
10.2.2 Properties of a good detergent 345
10.2.3 Functions of detergent additives 345

Index 347
