

Contents

Preface	xi
1 Introduction	1
2 The Chemical Industry	7
2.1 Introduction	7
2.2 Structure of the chemical industry	7
2.3 Raw materials and energy	10
2.3.1 Fossil fuel consumption and reserves	10
2.3.2 Energy and the chemical industry	12
2.3.3 Composition of fossil fuels	15
2.4 Base chemicals	23
3 Processes in the Oil Refinery	27
3.1 Oil refinery – an overview	27
3.2 Physical processes	27
3.2.1 Desalting/dehydration	27
3.2.2 Crude distillation	29
3.2.3 Propane deasphalting	31
3.3 Thermal processes	32
3.3.1 Visbreaking	32
3.3.2 Delayed coking	33
3.4 Catalytic processes	33
3.4.1 Catalytic cracking	36
3.4.2 Hydrotreating	49
3.4.3 Hydrocracking	54
3.4.4 Catalytic reforming	59
3.4.5 Alkylation	65
3.5 Conversion of heavy residues	70
3.5.1 Flexicoking	71
3.5.2 Catalytic hydrogenation of residues	73
3.6 Treatment of refinery gas streams	78
3.6.1 Removal of H ₂ S from refinery exhaust gases	78
3.6.2 Recovery of hydrogen from refinery gas streams	83
3.7 Current and future trends in oil refining	88
3.7.1 Reformulated gasoline	88
3.7.2 Diesel	89
3.7.3 The use of zeolites for shape selectivity in the oil refinery	90
3.7.4 Alternative technology and fuels	96

4 Steam Cracking: Production of Lower Alkenes	109
4.1 Introduction	109
4.2 Cracking reactions	110
4.2.1 Thermodynamics	110
4.2.2 Mechanism	111
4.2.3 Kinetics	112
4.3 Industrial process	113
4.3.1 Influence of feedstock on steam cracker operation and products	114
4.3.2 Cracking furnace	117
4.3.3 Heat exchanger	119
4.3.4 Coke	120
4.4 Product processing	121
4.5 Current and future developments	123
4.5.1 Selective dehydrogenation	123
4.5.2 Other sources of lower alkenes	126
5 Synthesis Gas	131
5.1 Introduction	131
5.2 Synthesis gas from natural gas	133
5.2.1 Reactions and thermodynamics	133
5.2.2 Steam reforming process	135
5.2.3 Advances in steam reforming	139
5.2.4 Autothermic reforming	140
5.2.5 Novel developments	142
5.3 Coal gasification	144
5.3.1 Gasification reactions	144
5.3.2 Thermodynamics	147
5.3.3 Current coal gasification processes	149
5.3.4 Recent developments	153
5.3.5 Applications	154
5.4 Purification and adjustment of synthesis gas	158
5.4.1 Conversion of carbon monoxide	158
5.4.2 Gas purification	159
6 Bulk Chemicals and Synthetic Fuels Derived from Synthesis Gas	163
6.1 Ammonia	163
6.1.1 Background information	163
6.1.2 Thermodynamics	165
6.1.3 Commercial ammonia synthesis reactors	166
6.1.4 Ammonia synthesis loop	169
6.1.5 Integrated ammonia plant	169
6.1.6 Applications of ammonia	173
6.2 Methanol	180
6.2.1 Background information	180
6.2.2 Thermodynamics	180
6.2.3 Synthesis gas for methanol production	183
6.2.4 Methanol synthesis	184
6.2.5 Applications of methanol	187
6.3 Fischer–Tropsch process	193
6.3.1 Reactions and thermodynamics	194
6.3.2 Reactors used in Fischer–Tropsch synthesis	196

6.3.3	Carbon removal	197
6.3.4	Processes	198
6.3.5	Future developments	201
7	Inorganic Bulk Chemicals	205
7.1	Sulfuric acid	205
7.1.1	Reactions and thermodynamics	206
7.1.2	SO ₂ conversion reactor	207
7.1.3	Modern sulfuric acid production process	208
7.1.4	Catalyst deactivation	210
7.2	Nitric acid	210
7.2.1	Reactions and thermodynamics	210
7.2.2	Processes	212
7.2.3	NO _x abatement	215
8	Homogeneous Catalysis	219
8.1	Introduction	219
8.2	Wacker oxidation	221
8.2.1	Background information	222
8.2.2	Processes	224
8.3	Acetic acid production	228
8.3.1	Background information	228
8.3.2	Methanol carbonylation process	230
8.3.3	Process economics	235
8.4	Hydroformylation	235
8.4.1	Background information	236
8.4.2	Thermodynamics	237
8.4.3	Catalyst development	237
8.4.4	Processes	239
8.5	Dimethyl terephthalate and terephthalic acid production	244
8.5.1	Background information	245
8.5.2	Conversion of <i>p</i> -toluic acid intermediate	246
8.5.3	Processes	247
8.5.4	Process comparison	249
8.6	Review of reactors used in homogeneous catalysis	250
8.6.1	Choice of reactor	250
8.6.2	Exchanging heat	252
8.7	Review of catalyst/product separation methods	252
8.7.1	Current separation techniques	253
8.7.2	Future developments	254
9	Heterogeneous Catalysis – Concepts and Examples	257
9.1	Introduction	257
9.2	Catalyst design	258
9.2.1	Catalyst size and shape	258
9.2.2	Mechanical properties of catalyst particles	260
9.3	Reactor types and their characteristics	260
9.3.1	Reactor types	261
9.3.2	Exchanging heat	263
9.3.3	Role of catalyst deactivation	265
9.3.4	Other issues	267

9.4	Novel developments in reactor technology	268
9.4.1	Adiabatic reactor with periodic flow reversal	269
9.4.2	Structured catalytic reactors	270
9.4.3	Hybrid systems	272
9.5	Selected examples of heterogeneous catalysis	277
9.5.1	Ethylbenzene and styrene production	277
9.5.2	Selective oxidations	286
9.5.3	Monolith applications	294
10	Fine Chemistry	307
10.1	Introduction	307
10.2	Plants for the production of fine chemicals	312
10.3	Batch reactor design	316
10.3.1	Mechanically stirred batch reactors	316
10.3.2	Batch reactors for gas–liquid–solid systems	318
10.4	Batch reactor scale-up	320
10.4.1	Temperature control	322
10.4.2	Heat transfer	322
10.4.3	Example of the scale-up of a batch and semi-batch reactor	323
10.5	Safety aspects of fine chemicals	327
10.5.1	Thermal risks in the production of chemicals	328
10.5.2	Safety and process development	328
10.5.3	Summary of scale-up of batch reactors	330
11	Polymerization Processes	333
11.1	Introduction	333
11.2	Polymerization reactions	334
11.2.1	Types of polymerization	334
11.2.2	Mechanisms of chain-growth polymerization	336
11.3	Polyethenes - background information	339
11.3.1	Catalyst development	339
11.3.2	Classification and properties	339
11.3.3	Applications	341
11.4	Processes for the production of polyethenes	341
11.4.1	Monomer production and purification	342
11.4.2	Polymerization – exothermicity	342
11.4.3	Production of LDPE	343
11.4.4	Production of HDPE and LLDPE	348
11.4.5	Economics of polyethene production processes	350
12	Biotechnology	353
12.1	Introduction	353
12.2	Conversion Processes	355
12.2.1	Introduction	355
12.2.2	Mode of operation	356
12.2.3	Type of reactor	357
12.2.4	Sterilization	362
12.3	Fermentation technology – cell biomass (bakers' yeast production)	363
12.3.1	Process layout	364
12.3.2	Cultivation equipment	365
12.3.3	Downstream processing	365

12.4 Fermentation technology – metabolic products (biomass as renewable energy source)	366
12.4.1 Ethanol	366
12.4.2 Biogas	367
12.5 Environmental application – wastewater treatment	368
12.5.1 Introduction	368
12.5.2 Process layout	369
12.5.3 Biological treatment processes	370
12.6 Enzyme technology – biocatalysts for transformations	376
12.6.1 General aspects	376
12.6.2 Production of L-amino acids	378
12.6.3 Production of artificial sweeteners	379
13 Process Development	387
13.1 Dependence of strategy on product type and raw materials	387
13.2 The course of process development	389
13.3 Development of individual steps	391
13.3.1 Exploratory phase	392
13.3.2 From process concept to preliminary flow sheet	392
13.3.3 Pilot plants/miniplants	395
13.4 Scale-up	401
13.4.1 Reactors with a single fluid phase	402
13.4.2 Fixed-bed catalytic reactors	404
13.4.3 Catalyst stability and accumulation of impurities	408
13.5 Safety and loss prevention	408
13.5.1 Introduction	408
13.5.2 Safety issues	409
13.5.3 Reactivity hazards	415
13.5.4 Design approaches to safety	417
13.6 Process evaluation	419
13.6.1 Introduction	419
13.6.2 Capital cost estimation	420
13.6.3 Operating costs and earnings	426
13.6.4 Profitability measures	430
13.7 Current and future trends	431
Appendix A: Chemical industry – Figures	437
Appendix B: Main Symbols used in Flow Schemes	441
Index	445
