Chapter 1 Overview of Ion-Exchange Membrane Processes

1	Introduction.....	1
2	Historical Development	1
3	The Structure of Ion-Exchange Membranes	4
4	Ion-Exchange Membrane Processes	5
4.1	Ion-Exchange Membranes in Separation Processes.....	6
4.1.1	Electrodialysis.....	6
4.1.2	Electrodialysis with Bipolar Membranes.....	7
4.1.3	Continuous Electrodeionization.....	9
4.1.4	Diffusion Dialysis.....	9
4.1.5	Donnan Dialysis.....	11
4.1.6	Electrolytic Processes Using Ion-Exchange Membranes	12
4.1.7	The Solid Polymer Electrolyte Fuel Cell	13
4.2	Technical Relevance of Ion-Exchange Membrane Processes.....	14
4.2.1	Desalination by Electrodialysis.....	15
4.2.2	Concentration of Mineral Salts and Other Applications of Electrodialysis.....	16
4.2.3	The Continuous Electrodeionization and the Use of Bipolar Membranes.....	16
4.2.4	Diffusion Dialysis and Donnan Dialysis.....	17
4.3	Relevance of Electrolytic Production Processes and Fuel Cells.....	17
5	Recommended Further Reading:	18
5.1	Ion-Exchange Membrane Preparation.....	18
5.2	Electrodialysis.....	18
5.3	Bipolar Membrane Electrodialysis.....	18
5.4	Continuous Electrodeionization.....	19
5.5	Electrolytic Chlorine and Alkaline Production	19
5.6	Fuel Cells and Electrochemical Synthesis	19
	Literature:	20

Chapter 2 Electrochemical and Thermodynamic Fundamentals

1	Introduction.....	23
2	Basic Electrochemical Relations	23
2.1	Electron and Ion Conductivity and Ohm's Law	24
2.2	The Electric Field and the Permittivity	26
2.2.1	The Electric Field.....	27
2.2.2	The Debye-Hückel Theory of Ionic Solutions	29
2.2.3	Electrical Dipoles and Intermolecular Forces	31
2.3	The Double Layer at the Surface of Ion-Exchange Membranes	33
2.3.1	The Principle of a Capacitor	33
2.3.2	The Electrical Double Layer.....	34
3	Basic Thermodynamic Relations	37
3.1	Chemical and Electrochemical Equilibrium	43

3.1.1	The Water Dissociation and the pH- and pK-Values of Acids and Bases	43
3.1.2	The Ion-Exchange Equilibrium and the Donnan Potential	47
3.1.3	The Electrochemical Equilibrium	48
3.1.4	The Osmotic Equilibrium and the Osmotic Pressure	53
3.1.5	Electroosmosis and Streaming Potential	57
3.2	The Electrochemical Cell and the Electromotive Force	60
3.2.1	The Electrochemical Cell Reaction and the Gibbs Free Energy	63
3.2.2	The Standard Cell Potential and the Nernst Equation	65
4	Transport of Ions in Solutions and Membranes	65
4.1	Mathematical Description of Transport Phenomena in Solutions	66
4.1.1	Phenomenological Description of Mass Transport	67
4.1.2	Description of Mass Transport by the Stefan- Maxwell Approach	68
4.1.3	Description of Mass Transport by the Nernst-Planck Equation	69
4.1.4	Electrical Current and Ion Fluxes	71
4.1.5	The Transport and Transference Numbers	72
4.1.6	Transport of Ions in an Aqueous Solution	73
4.1.7	Mass Transport in Ion-Exchange Membranes	75
4.1.8	Membrane Counterion Permselectivity	76
4.1.9	The Flux of Solvent Through an Ion-Exchange Membrane	79
4.2	Membrane Permselectivity and the Donnan Exclusion	80
4.3	The Membrane Potential	81
5	List of Symbols:	84
	Literature:	87

Chapter 3 Preparation and Characterization of Ion-Exchange Membranes

1	Introduction	89
2	Preparation of Ion-Exchange Membranes	92
2.1	Preparation of Homogeneous and Microheterogeneous Membranes	93
2.1.1	Polymerization and Polycondensation of Monomers	94
2.1.2	Introduction of Ionic Groups into a Preformed Solid Polymer Film	101
2.1.3	Introduction of Ionic Groups into a Dissolved Polymer	102
2.2	Preparation Procedure of Heterogeneous Ion-Exchange Membranes	104
2.3	Special Property Ion-Exchange Membranes	105
2.3.1	Monovalent Ion Permselective Membranes	105
2.3.2	Proton Permselective Cation-Exchange Membranes	106
2.3.3	Anion-Exchange Membranes of High Proton Retention	106
2.3.4	Anti-Fouling Anion-Exchange Membranes	107
2.3.5	Alkaline Stable Anion-Exchange Membranes	108
2.3.6	Bipolar Membranes	109
2.3.7	Ion-Exchange Membranes for Diffusion Dialysis	114
2.3.8	Other Special Property Ion-Exchange Membranes	114
3	Characterization of Ion-Exchange Membranes	115
3.1	The Structure of Ion-Exchange Membranes and its Characterization	116
3.2	Mechanical Stability, Swelling, and Permeability of Membranes	117
3.2.1	The Membrane Water Content	118
3.2.2	Hydraulic Permeability of Ion-Exchange Membranes	119

3.2.3	Long-Term Chemical Stability of Membranes	120
3.3	Determination of Electrochemical Properties of Membranes	120
3.3.1	The Ion-Exchange Capacity of a Membrane.....	121
3.3.2	Electrical Resistance of Ion-Exchange Membranes.....	121
3.3.3	Permselectivity of Ion-Exchange Membranes	131
3.3.4	Membrane Permeation Selectivity for Different Counterions	134
3.3.5	Diffusion Coefficients of Electrolytes in Ion-Exchange Membranes	134
3.3.6	Water Transport in Ion-Exchange Membranes.....	136
3.3.7	Characterization of Special Property Membranes.....	138
4	List of Symbols.....	140
	Literature.....	141

Chapter 4 Operating Principle of Electrodialysis and Related Processes

1	Introduction.....	147
2	The Principle of Conventional Electrodialysis	147
2.1	Mass Transport in an Electrodialysis Stack	149
2.1.1	Material Balance Between the Diluate and Concentrate Flow Streams	152
2.2	Membrane Counterion Selectivity	158
2.3	Concentration Polarization and Limiting Current Density	159
2.4	The Limiting Current Density, Causes and Consequences.....	163
2.4.1	Experimental Determination of the Limiting Current Density	164
2.4.2	The Overlimiting Current Density	166
2.5	Membrane Fouling and Poisoning	168
2.6	Energy Requirements in Electrodialysis	169
2.6.1	Minimum Energy Required for the Separation of a Molecular Mixture.....	169
2.6.2	Practical Energy Requirements in Electrodialysis	173
2.7	Processes Effecting the Efficiency of Electrodialysis.....	181
2.7.1	Current Utilization	181
3	Electrodialysis with Bipolar Membranes.....	184
3.1	The Principle of Water Dissociation in Bipolar Membranes.....	185
3.1.1	Models for the Accelerated Water Dissociation in Bipolar Membranes	187
3.1.2	Mass Transport in Electrodialysis with Bipolar Membranes.....	199
3.1.3	Energy Consumption in Electrodialysis with Bipolar Membranes.....	200
4	The Principle of Diffusion Dialysis	205
4.1	The Mass Transport in Diffusion Dialysis.....	206
4.2	Complicating Factors in Dialysis Mass Transport Modeling.....	211
5	The Principle of Continuous Electrodeionization.....	212
5.1	Mass Transfer in Continuous Electrodeionization.....	213
5.2	Energy Requirements in Continuous Electrodeionization	214
5.3	Complicating Factors in Continuous Electrodeionization Modeling.....	214
6	The Principle of Donnan Dialysis.....	215
6.1	Mass Transport in Donnan Dialysis.....	216
7	Other Ion-Exchange Separation Processes.....	218
8	List of Symbols	218
	Literature.....	222

Chapter 5 Ion-Exchange Membrane Process and Equipment Design

1	Introduction.....	227
2	Design of Electrodialysis Processes and Equipment	227
2.1	The Electrodialysis Stack Design and Mode of Operation	228
2.1.1	The Sheet-Flow Electrodialysis Stack	229
2.1.2	The Tortuous Path Flow Stack.....	230
2.2	Electrodialysis Process Design	230
2.2.1	Unidirectional Electrodialysis System	231
2.2.2	Membrane Fouling and its Control by Electrodialysis Reversal.....	232
2.3	Continuous and Batch Type Operation in Electrodialysis	234
2.4	Mass Transport in an Electrodialysis Stack	235
2.5	Effect of Process Design on Limiting Current Density.....	238
2.6	Energy Required for the Transfer of Ions in Electrodialysis	240
2.7	Practically Used Relations for the Design of an Electrodialysis Plant	241
2.7.1	Energy Requirements in a Practical Electrodialysis Desalination Process	243
2.8	Electrodialysis Power Supply and Instrumentation	244
2.9	Pretreatment Procedures and Safety Requirements	245
2.10	Process Economics	246
2.10.1	Calculation of an Electrodialysis Plant	247
2.10.2	Estimation of Desalination Costs.....	251
2.10.3	Discussion of Parameter Values and Model Assumptions	252
3	Bipolar Membrane Electrodialysis Process Design	254
3.1	The Design of an Electrodialysis Stack with Bipolar Membranes.....	256
3.1.1	The Applied Voltage and Current Density in a Bipolar Membrane Stack.....	257
3.1.2	Membrane Area and Process Path Length in a Bipolar Membrane Stack	259
3.2	Process Design Aspects and Hardware Components.....	260
3.2.1	Power Supply and Instrumentation.....	261
3.2.2	Membrane Fouling Control and Pretreatment Procedures.....	261
3.3	Process Costs	261
3.3.1	Investment Costs in Electrodialysis with Bipolar Membranes	262
3.3.2	Energy Requirements in Electrodialytic Water Dissociation.....	263
3.3.3	The Reversible Water Dissociation Energy	264
3.3.4	Practical Energy Requirements in Bipolar Membrane Electrodialysis	264
3.3.5	The Current Utilization.....	266
3.3.6	Membrane Co- and Counterion Selectivity	267
3.3.7	Processes Effecting the Electrodialysis with Bipolar Membranes.....	267
3.3.8	Operating and Investment Costs	268
3.3.9	The Total Electrodialytic Water Dissociation Process Costs.....	268
3.4	Costs Calculation for a Bipolar Electrodialysis Process.....	269
3.4.1	Example of Designing a Bipolar Membrane Electrodialysis Plant.....	269
3.5	Operational Problems in Bipolar Membrane Electrodialysis.....	272
4	Diffusion Dialysis Process and Equipment Design	273
4.1	System Components and Dialyser Design Aspects.....	273
4.1.1	The Diffusion Dialysis Stack	274
4.1.2	The Dialyser Membrane.....	276
4.2	Problems Related to the Design of a Diffusion Dialysis Plant	276

4.3	Practical Example of a Diffusion Dialysis Plant.....	277
4.3.1	Diffusion Dialysis Process Costs.....	278
4.3.2	Operational Problems and Limitations in Diffusion Dialysis	278
5	Continuous Electrodeionization Process Design	279
5.1	System Components and Design Aspects.....	279
5.2	Operational Problems in Practical Applications of Electrodeionization	282
6	Donnan Dialysis Process and Equipment Design.....	282
6.1	System Components and Design Aspects.....	283
6.2	Problems in the Practical Application of Donnan Dialysis.....	283
6.3	Process Costs and Economics.....	283
7	Other Ion-Exchange Membrane Processes	283
8	List of Symbols	283
	Literature.....	285

Chapter 6 Applications of Ion-Exchange Membrane Separation Processes

1	Introduction.....	287
2	Practical Application of Electrodialysis.....	287
2.1	Brackish Water Desalination by Electrodialysis.....	289
2.2	Production of Industrial Water by Electrodialysis	290
2.2.1	Electrodialysis Predemineralization of Boiler Feed Water	291
2.2.2	Waste Water Treatment by Electrodialysis	294
2.3	Food Processing by Electrodialysis.....	300
2.3.1	Deminerlization of Cheese Whey and Skimmed Milk	301
2.3.2	Other Applications of Electrodialysis in the Food Industry.....	303
2.4	Pre-Concentration of Salts by Electrodialysis.....	305
2.5	Electrodialysis in Hybrid Processes.....	307
3	Applications of Bipolar Membrane Electrodialysis.....	308
3.1	Production of Acids and Bases by Bipolar Membrane Electrodialysis	310
3.2	Applications of Bipolar Membranes in Pollution Control Processes	311
3.3	Applications of Bipolar Membrane Electrodialysis in Biotechnology	318
3.4	Applications of Bipolar Membranes in Non-Aqueous Solutions	323
3.5	Other Processes Involving Bipolar Membrane Electrodialysis.....	324
4	Practical Applications of Diffusion Dialysis	324
4.1	Waste Water Treatment by Diffusion Dialysis	324
5	Applications of Continuous Electrodeionization.....	326
6	Practical Applications of Donnan Dialysis.....	328
	Literature.....	328

Appendix.....	331
