

CONTENTS

Preface	xxi
Acknowledgments	xxiii
Introduction	xxv
1 Optical Properties: Light Scattering	1
1.1 Rayleigh Theory	4
1.2 Molecular Weights by Laser Light Scattering	5
1.3 Mie Theory	7
1.4 Fraunhofer Diffraction	9
1.5 Quasi-elastic Light Scattering	10
1.6 Laser Velocimetry	13
References	14
2 Rheology	16
2.1 The Motion of Disperse-Phase Systems	16
2.1.a Newtonian Flow	17
2.1.b Poiseuille Flow	19
2.1.c Elasticity	20
2.1.d Plastic Flow and Shear-Thinning Flow	21
2.1.e Dilatancy	25
2.1.f Summary of Common Rheograms	27
2.1.g Thixotropy and Rheopexy	29
2.1.h Viscoelasticity	30
2.1.i Units and Dimensions	33
2.2 Instruments to Measure Viscosity	34
2.2.a Capillary and Other Tube Viscosimeters	34
2.2.b Falling-Ball and Rising-Bubble Viscosimeters	37
2.2.c Falling-Needle Viscosimeters	38
2.2.d Vibrating Probe Viscosimeters	38
2.2.e Piston Viscosimeters	39
2.2.f Microbalance Viscosimeters	39
2.2.g Rheometers	39
2.2.g(i) The Brookfield Viscosimeter	41
2.2.g(ii) Coaxial Cylindrical Rheometers	41
	vii

2.2.g(iii)	Cone-and-Plate Rheometers	42
2.2.g(iv)	Squeezing Flow Rheometers	44
2.3	Manufacturers of Rheometers	45
	References	46
3	Kinetic and Statistical Properties	48
3.1	Kinetic Properties	48
3.1.a	Motion of Particles by an Applied Force	48
3.1.b	Motion of Particles by Gravity	49
3.1.c	Motion of Particles by Centrifugation	50
3.1.d	Motion of Particles by an Applied Electric Field	51
3.1.e	Motion of Particles by Viscous Forces	51
3.1.f	Motion of Particles by Ultrasound	52
3.2	Statistical Properties	54
3.2.a	Brownian Motion	54
3.2.b	Sedimentation Equilibrium	57
3.2.c	Colligative Properties	58
3.2.d	Fractals	58
	References	60
4	Particle Sizing	62
4.1	Types of Distributions	63
4.2	Sampling and Sample Preparation	66
4.3	Sizing by Flow	67
4.3.a	Sieving	67
4.3.b	Filtration	69
4.3.c	Sedimentation	70
	4.3.c(i) Theory	70
	4.3.c(ii) Detectors	71
4.3.d	Elutriators, Impactors, and Cyclones	73
4.3.e	Centrifugation	74
	4.3.e(i) Disk Centrifuge	75
	4.3.e(ii) Uniform-Start Centrifuge	76
4.3.f	Ultracentrifugation	76
4.3.g	Capillary Hydrodynamic Chromatography	77
4.3.h	Field-Flow Fractionation	78
	4.3.h(i) Sedimentation Field-Flow Fractionation	78
	4.3.h(ii) Thermal Field-Flow Fractionation	79

4.4	Sizing by Single-Particle Detection	81
4.4.a	Optical Microscope	81
4.4.b	Image Analysis	81
4.4.c	Ultramicroscopy	82
4.4.d	Electron Microscopy	83
4.4.e	Time-of-Transition Method	83
4.4.f	Particle Counting: Photozone Detection	84
4.4.g	Particle Counting: Electrozone Detection	86
4.5	Sizing by Light Scattering	87
4.5.a	Rayleigh Scattering	88
4.5.b	Turbidity	89
4.5.c	Mie Scattering	90
4.5.d	Fraunhofer Diffraction	90
4.5.e	Polarization Effects	92
4.5.f	Quasi-Elastic Light Scattering (QELS)	92
4.5.g	Diffusing-Wave Spectroscopy	93
4.5.h	Light Scattering as a Detector	94
4.6	Sizing by Acoustics	94
4.6.a	Scattering and Absorption	94
4.6.b	Speed of Sound	96
4.6.c	Electroacoustics	98
4.7	Surface Area by Adsorption	98
4.7.a	Multilayer Gas Adsorption	99
4.7.b	Monolayer Gas Adsorption	101
4.7.c	Pore-Volume Analysis	102
4.7.d	Adsorption from Solution	103
4.8	Indirect Methods	105
4.9	Comparisons of Techniques	106
4.10	Manufacturers	109
	References	111

5 Processing Methods for Making Emulsions and Suspensions 117

5.1	Dry Grinding (Micronizing)	118
5.2	High-Speed Stirrers	118
5.2.a	Blade Stirrers	118
5.2.b	Rotor-Stator Dispersers	120
5.3	High-shear Mills	121
5.3.a	Colloid Mills	121
5.3.b	Homogenizers	122
5.3.c	Ultrasonic Dispersers	123

5.4	Electrostatic Dispersing	123
5.5	Impact Mills	124
5.5.a	Ball and Jar Mills	124
5.5.b	Vibratory Mills	125
5.5.c	Attritors	126
5.5.d	Sand or Other Small-Media Mills	127
5.6	Mills for High-viscosity Dispersions	129
5.6.a	Roll Mills	129
5.6.b	Heavy-Duty Mixers	130
5.7	Chemical Processing Aids	130
5.8	Manufacturers of Milling Equipment	132
	References	134
6	Liquid Surfaces and Interfaces	136
6.1	Molecular Theory of Surface and Interfacial Tension	136
6.2	Thermodynamics of Surfaces and Interfaces	140
6.2.a	Coalescence of Droplets	141
6.2.b	Spreading of One Liquid on Another	142
6.2.c	Encapsulation of One Liquid by Another	142
6.2.d	Works of Adhesion and Cohesion	144
6.2.e	Free Energy of Emersion	146
6.3	Thermodynamics of Curved Interfaces	146
6.4	Sessile and Pendent Drops	149
6.5	The Kelvin Equation	150
6.6	Ostwald Ripening	151
6.7	Capillary or Laplace Flow	152
6.8	Marangoni Flow	153
6.8.a	Processes Dependent on Marangoni Flow	154
6.8.b	Thermally Induced Marangoni Flow	155
	References	155
7	Liquid/Solid Interfaces	157
7.1	Thermodynamics of Liquids in Contact with Solids	157
7.2	Degrees of Liquid/Solid Interaction	160
7.3	Floating Particles	161
7.4	Initial and Final Spreading Coefficients	162
7.5	Determination of Spreading Pressures by Adsorption Techniques	167
7.6	Dynamics of Spreading	168

7.7	Final Spreading	169
7.8	Detergency	170
7.9	Thin-Film Coatings	171
7.10	Electrical Charges	173
	References	174
8	Theories of Surface and Interfacial Energies	177
8.1	Forces of Attraction Between Molecules	177
8.2	The Componental Theory of Interfacial Tension	179
8.2.a	Dispersion Force Contributions to Interfacial Tension	180
8.2.b	Acid–Base Contributions to Interfacial Tension	185
8.3	Dispersion Energies of Solid Substrates	190
8.4	Acid–Base Character of Solid Substrates	196
	References	197
9	Experimental Methods of Capillarity	200
9.1	Surface and Interfacial Tensions	200
9.1.a	Capillary Height	200
9.1.b	Drop Weight	201
9.1.c	Wilhelmy Plate	201
9.1.d	The Du Noüy Ring	202
9.1.e	Sessile and Pendent Drop	202
9.1.f	Maximum Pull on a Rod	203
9.1.g	Maximum Bubble Pressure	205
9.1.h	Spinning Drop	206
9.1.i	Vibrating Jet	207
9.2	Methods to Measure Contact Angle	208
9.2.a	On Flat Surfaces	208
9.2.a(i)	The Contact Angle Goniometer	208
9.2.a(ii)	Interfacial Meniscus	209
9.2.b	On Fibers: The Fiber Balance	209
9.2.c	On Powders	210
9.2.c(i)	The Bartell Cell	210
9.2.c(ii)	The Washburn Equation	210
9.2.c(iii)	By Centrifugation	212
9.2.c(iv)	By Compression on a Langmuir Balance	213
9.2.c(v)	By Heats of Immersion	213
9.3	Manufacturers of Equipment	214
	References	215

10	Wetting of Irregular Surfaces	218
10.1	Introduction	218
10.2	Irregularities Due to Roughness: Wenzel Equation	218
10.3	Irregularities Due to Chemical Heterogeneity	219
10.4	Irregularities Due to Pores	220
10.5	Irregularities Due to Scratches	221
10.6	Jamin Effect in Capillaries	222
10.7	True Contact Angles on Rough Surfaces	224
10.8	Techniques	224
10.8.a	The Wilhelmy Method (Plate or Fiber) for Measuring Contact Angles on Irregular Surfaces	224
10.8.b	Goniometer Methods for Measuring Contact Angle Hysteresis	226
	References	226
11	Surface-Active Solutes	228
11.1	Introduction	228
11.2	Range of Solutes from Lipophilic to Hydrophilic	230
11.3	Types: Anionic, Cationic, and Nonionic	233
	References	236
12	Physical Properties of Insoluble Monolayers	237
12.1	Observations	237
12.2	Viscoelasticity of Insoluble Monolayers	242
12.3	Built-up Films: Langmuir–Blodgett Films	243
	References	244
13	Aqueous Solutions of Surface-Active Solutes	246
13.1	Adsorption	246
13.2	Lundelius's Rule and the Ferguson Effect	249
13.3	Micellization and Solubilization	250
13.3.a	Self-Assembly by Spontaneous Association	250
13.3.b	Methods to Determine Critical Micelle Concentration	253
13.3.c	Equilibrium or Phase Separation?	254
13.3.d	Effects of Varying Molecular Structure	257
13.3.e	Mixtures of Homologs	261
13.3.f	Solubilization by Micelles (Microemulsions)	261
13.4	The Krafft Point	264
13.5	Elasticity of Surface Films	265
13.6	Dynamic Surface Tensions	268

13.7	Ultralow Dynamic Surface Tension	270
13.8	Phase Behavior of Surface-Active Solutes	271
13.9	The Effects of Geometric Packing	273
	References	276
14	Surface Activity in Nonpolar Media	279
14.1	The Inverse Micelle	279
14.2	Adsorption From Nonpolar Solution	280
14.3	Electrical Charges in Nonpolar Media	282
14.4	Theories of Bubble Rise in Viscous Media	287
14.4.a	Rise in Pure Liquids: Hadamard Regime	288
14.4.b	Effect of Surface-Active Solutes: Stokes Regime	289
	References	290
15	Thermodynamics of Adsorption from Solution	292
15.1	The Gibbs Adsorption from Solution	292
15.1.a	Two-Component Systems	294
15.1.b	Three-Component Systems	296
15.2	The Surface Tension Isotherm	300
15.2.a	Adsorption Isotherm: Langmuir	301
15.2.b	Equation of State: Frumkin	301
15.3	Standard-State Free Energies	302
15.4	Traube's Rule	305
	References	307
16	The Relation of Capillarity to Phase Diagrams	308
16.1	Introduction	308
16.2	Regular Solution Theory	311
16.3	Critical Point Wetting	313
