Foreword to the third edition	iii
1 Introduction	1
1.1 Accept men as we find them	1
1.2 Meccano or dolls?	3
1.3 Types of human error	4
1.4 Two simple examples	6
1.5 Accident investigation	8
1.6 A story	9
1.7 Research on human error	10
2 Accidents caused by simple slips	11
2.1 Introduction	11
2.2 Forgetting to open or close a valve	13
2.3 Operating the wrong valve	21
2.4 Pressing the wrong button	25
2.5 Failures to notice	29
2.6 Wrong connections	31
2.7 Errors in calculations	32
2.8 Other medical errors	34
2.9 Railways	35
2.10 Other industries	41
2.11 Everyday life (and typing)	43
2.12 Fatigue	45
3 Accidents that could be prevented by better training or instructions	48
3.1 Introduction	48
3.2 Three Mile Island	50
3.3 Other accidents that could be prevented by relatively sophisticated training	53
3.4 Accidents that could be prevented by elementary training	62
3.5 Contradictory instructions	65
3.6 Knowledge of what we don't know	66

3.7	Some simple ways of improving instructions	67
3.8	Training or instructions?	72
3.9	Cases when training is not the best answer	74
4	Accidents due to a lack of physical or mental ability	78
4.1	People asked to do the physically difficult or impossible	78
4.2	People asked to do the mentally difficult or impossible	80
4.3	Individual traits and accident proneness	85
4.4	Mind-sets	88
5	Accidents due to failures to follow instructions	97
5.1	Accidents due to non-compliance by managers	99
5.2	Accidents due to non-compliance by operators	103
5.3	Actions to improve compliance	107
5.4	Alienation	109
5.5	Postscript	110
6.	Accidents that could be prevented by better management	112
6.1	An accident caused by insularity	114
6.2	An accident due to amateurism	115
6.3	The fire at King's Cross railway station	116
6.4	The Herald of Free Enterprise	117
6.5	The Clapham Junction railway accident	118
6.6	Piper Alpha	120
6.7	What more can senior managers do?	120
6.8	The measurement of safety	125
6.9	Conclusions	127
7	The probability of human error	129
7.1	Why do we need to know human error rates?	130
7.2	Human error rates – a simple example	132
7.3	A more complex example	132
7.4	Other estimates of human error rates	136
7.5	Two more simple examples	141
7.6	Button pressing	144
7.7	Non-process operations	146
7.8	Train driver errors	147
7.9	Some pitfalls in using data on human reliability	147
7.10	Data on equipment may be data on people	149

7.11	Who makes the errors?	151
7.12	Conclusions	151
8	Some accidents that could be prevented by better design	154
8.1	Isolation of protective equipment	155
8.2	Better information display	156
8.3	Pipe failures	156
8.4	Vessel failures	159
8.5	The Sellafield leak	159
8.6	Other design errors	161
8.7	Conceptual shortcomings	162
8.8	Problems of design contractors	165
8.9	Domestic accidents	166
9	Some accidents that could be prevented by better construction	168
9.1	Pipe failures	168
9.2	Miscellaneous incidents	170
9.3	Prevention of construction errors	173
10	Some accidents that could be prevented by better maintenance	175
10.1	Incidents which occurred because people did not understand how equipment worked	175
10.2	Incidents which occurred because of poor maintenance practice	178
10.3	Incidents due to gross ignorance or incompetence	180
10.4	Incidents which occurred because people took short cuts	181
10.5	Incidents which could be prevented by more frequent or better maintenance	183
10.6	Can we avoid the need for so much maintenance?	185
11	Some accidents that could be prevented by better methods of operation	187
11.1	Permits-to-work	187
11.2	Tanker incidents	189
11.3	Some incidents that could be prevented by better instructions	192
11.4	Some incidents involving hoses	193
11.5	Communication failures	194
11.6	Examples from the railways	199
11.7	Simple causes in high tech industries	201
12	Errors in computer-controlled plants	203
12.1	Hardware failures	204
12.2	Software errors	205
12.3	Specification errors	207
12.4	Misjudging responses to a computer	210

12.5	Entering the wrong data	213
12.6	Failures to tell operators of changes in data or programs	214
12.7	Unauthorized interference with hardware or software	214
12.8	The hazards of old software	217
12.9	Other applications of computers	217
12.10	Conclusions	218
13	Personal and managerial responsibility	221
13.1	Personal responsibility	221
13.2	Legal views	223
13.3	Blame in accident investigations	227
13.4	Managerial wickedness	228
13.5	Managerial competence	229
13.6	Possible and necessary	231
14	The adventures of Joe Soap and John Doe	234
15	Some final thoughts	254
	Postscript	257
	Appendix 1 – Influences on morale	258
	Appendix 2 – Some myths of human error	261
	Appendix 3 – Some thoughts on sonata form	269
	Further reading	271
	Index	273
