Foreword	v
Preface	vii
Chapter 1. THEORY OF SURFACE TENSION	
1. Is the Surface Tension of Liquids Real?	1
2. Surface Tension as Mechanical Quantity. Laplace Formula	3
3. Surface Tension as Thermodynamic Quantity	5
4. Surface Tension and Surface Energy of Liquids	7
5. Surface Tension and Molecular Forces	8
6. Surface and Cohesive Energy of Condensed Bodies	12
7. Condition of Equilibrium at Three-Phase Contact Line. Neumann and Young Equations	17
8. Gibbs Adsorption Equation	21
9. Dependence of Surface Tension on Temperature	25
10. Dependence of Surface Tension on Pressure	29
11. Dependence of Surface Tension on Chemical Composition. Surface Activity	32
12. Surfactants	36
13. Role of Surface Tension in Stability of Bodies	38
14. Nonequilibrium Surface Tension under Condition of Surface Relaxation	40
15. Nonequivalence of Mechanical and Thermodynamic Surface Tension in Solids	43
Chapter 2. AXISYMMETRIC MENISCI AND LAPLACE FORMULA	
16. Curvature of the Surface of Revolution	48
17. Principal Types of Axisymmetric Menisci. Rolled Up Menisci	50
18. Rolled Out Menisci	63
19. Particular Cases of Rolled Up and Rolled Out Menisci	68
20. Bridges	73
Chapter 3. METHODS FOR MEASURING SURFACE TENSION OF LIQUIDS BASED ON STUDYING PROFILES OF MENISCI WITH FIXED SHAPE	
21. General Formulation of the Problem of Determining Surface Tension	82
22. Sessile Drop Method	84
23. Pendant Drop Method	101
24. Regression Variants of the Pendant and Sessile Drop Methods	113
25. Experimental Aspects of Pendant and Sessile Drop Methods	122
26. Rolled out Meniscus Method	138

27. Capillary Rise Method	143
28. Annulus-Capillary Rise Method	159
29. Two-Meniscus Methods	162
30. Method of Meniscus at Flat Wall	168
31. Vertical Cylinder Method	176
32. Wilhelmy Plate Method	179

Chapter 4. METHODS BASED ON MEASURING EXTREME VALUES OF PARAMETERS OF MENISCI

33. General Formulation of the Problem of Determining Surface Tension	197
34. Maximum Sessile Drop Height Method	199
35. Method of Drawing out Vertical Cylinder	203
36. Method of Drawing out Sphere	209
37. Method of Drawing out Cone	216
38. Methods of Drawing out Plate and Hollow Cylinder	221
39. Methods of Drawing out Horizontal Cylinder and Ring	225

Chapter 5. METHODS USING MENISCI AT STABILITY LIMIT

40. Method Of Maximum Pressure In Bubble Or Drop	244
41. Falling Meniscus Method	262
42. Drop Weight Method	264
43. Method of Maximum Height of Pendant Drop	287
44. Methods of Detachment of Bodies. First Type Variants	289
45. Methods of Detachment of Bodies. Second Type Variants	290

Chapter 6. SPECIAL DYNAMIC METHODS

46. Oscillating-Jet Method	304
47. Method Of Jet Printer	313
48. Liquid Curtain Method	317
49. Capillary Wave Method	319

Chapter 7. METHODS USING ROTATION FIELD

50. Spinning Drop Method	328
51. Spinning Rod Method	343
52. Method Of Squeezing Out Drop By Centrifugal Field	345

Chapter 8. METHODS TO DETERMINE SURFACE TENSION OF SOLIDS

53. Specialty of Determining Surface Tension of Solids	351
54. Zero-Creep Method	353

55. Field Electron and Ion Microscopy	358
56. Inert Gas Bubble Method	362
57. Void Annealing and Healing of Scratches	363
58. Crystal Cleavage Method	366
59. Cohesion Method	371
60. Anisotropy of σ	372
61. Use of Young Equation and Wetting Contact Angle For Finding σ	373
61.1. Method of Boundary of Two Crystal Grains	373
61.2. Critical Surface Tension Method	374
61.3. Equation of State	375
61.4. Fowkes Method	377
62. Determining Surface Tension From Solubility	379
63. Relative Measurements of γ	382
64. Finding Surface Energy And Surface Tension From Phase Transition Heat	383
