

CONTENTS

Preface	VII
Contents	XI
1. INTRODUCTION	1-8
1.1. Historical introduction	1
1.2. The scope of the subject	5
References	7
2. ION PENETRATION AND CHANNELLING, G. DEARNALEY	9-153
2.1. Introduction	9
2.2. Specific energy loss	10
2.3. Atomic cross-sections	11
2.4. Electronic stopping	11
2.5. Nuclear stopping	20
2.6. The interatomic potential	21
2.7. Nuclear stopping formulae	25
2.8. Experimental measurement of energy loss	30
2.9. Range theory	36
2.10. Experimental measurement of ion range	42
2.11. Ion penetration in crystal lattices: channelling	50
2.12. Channelling at low energies	55
2.13. Channelling at higher energies	59
2.14. Experimental measurement of critical channelling angles	68

2.15. The energy loss of channelled ions	70
2.16. Dechannelling	83
2.17. Experimental measurements of range distributions in crystals	87
2.18. Anomalous diffusion accompanying ion implantation	126
2.19. Atom location by channelling techniques	137
References	148
 3. THE PHYSICAL STATE OF ION IMPLANTED SOLIDS, R. S. NELSON	 154-254
3.1. Radiation damage produced during implantation	154
3.1.1. Atomic displacement	154
3.1.2. The physical configuration of damage	163
3.1.3. Annealing of damage	193
3.2. Surface effects	207
3.2.1. Sputtering	207
3.2.2. Recoil implantation	221
3.3. The fate of ion implanted atoms	226
3.3.1. General considerations	226
3.3.2. Radiation enhanced diffusion	227
3.3.3. Precipitation effects	231
3.3.4. Experimental location of impurity atoms using channelling techniques	239
3.3.5. Effect of impurities on the recovery of radiation damage	245
References	252
 4. THE PRODUCTION AND MANIPULATION OF ION BEAMS FOR IMPLANTATION, J. H. FREEMAN	 255-453
4.1. Introduction	255
4.2. General accelerator concepts	258
4.2.1. The design of implantation accelerators	258
4.2.2. Ion beam requirements	275
4.2.3. Beam intensity	275
4.2.4. Beam energy	279
4.2.5. Dispersion and resolution	283
4.2.6. Emittance and brightness	288
4.3. Heavy ion sources	292
4.3.1. Hot cathode arc sources	295

4.3.2. Radiofrequency discharge sources	350
4.3.3. Penning discharge sources	353
4.3.4. Surface ionisation sources	356
4.3.5. Negative heavy ion sources	366
4.3.6. Other types of heavy ion source	369
4.3.7. Ion source design and operation	375
4.4. Ion beam analysis	386
4.4.1. The homogeneous field magnetic analyser	387
4.4.2. Fringing field effects	393
4.4.3. Inhomogeneous field magnetic analysers	396
4.4.4. The Wien velocity filter	397
4.4.5. The electric quadrupole analyser	400
4.5. Target chambers	402
4.5.1. Scanning requirements	403
4.5.2. Target and beam alignment	408
4.5.3. Ion beam current measurements	416
4.5.4. Ion beam heating effects	421
4.5.5. Sample temperature control	427
4.5.6. Description of target chambers	428
4.6. The techniques of ion implantation with radioactive dopants	433
4.6.1. The use of isotope separators for radioactive implantation	435
4.7. Finely focused ion beam	442
4.7.1. The current status of focused ion beams	443
References	448

Appendix 1. OPERATIONAL PROCEDURE FOR HEAVY ION PRODUCTION.	454-475
---	---------

5. APPLICATIONS OF ION IMPLANTATION TO SEMICONDUCTORS, J. STEPHEN.	476-707
5.1. Introduction	476
5.1.1. Historical introduction	476
5.2. Controlled spatial doping of semiconductors	479
5.2.1. Introduction	479
5.2.2. The silicon planar technology	479
5.2.3. Epitaxial silicon layers	481
5.2.4. Thermal diffusion of impurities	483
5.2.5. Diffusion masks	485

5.2.6. <i>Surface passivation</i>	486
5.2.7. <i>Metallic interconnections</i>	487
5.3. Doping by ion implantation	487
5.3.1. <i>Introduction</i>	487
5.3.2. <i>Choice of dopants</i>	487
5.3.3. <i>Temperatures involved during implantation</i>	488
5.3.4. <i>Distribution of implanted ions</i>	492
5.3.5. <i>Masking against an ion beam</i>	499
5.4. Electrical properties of ion implanted layers	525
5.4.1. <i>Introduction</i>	525
5.4.2. <i>Methods of measuring the electrical properties of ion implanted layers</i>	526
5.4.3. <i>Methods of measuring the electrical properties of ion implanted junctions</i>	571
5.4.4. <i>Electrical results for various ion implanted dopants in silicon</i>	596
5.5. The application of ion implantation to solid state device fabrication	645
5.5.1. <i>Introduction</i>	645
5.5.2. <i>Controlled surface doping</i>	646
5.5.3. <i>Buried layers</i>	657
5.5.4. <i>Abrupt junctions</i>	663
5.5.5. <i>Precision alignment of the gate electrode of the metal oxide silicon transistor</i>	664
5.5.6. <i>Doping of imperfect semiconductor materials</i>	680
5.5.7. <i>Nuclear radiation detectors</i>	681
5.5.8. <i>Ion implantation of insulating layers</i>	687
5.6. Compound semiconductors	689
5.6.1. <i>Introduction</i>	689
5.6.2. <i>Device fabrication by ion implantation in compound semiconductors</i>	690
Note added in proof	696
References	699
6. APPLICATIONS OF ION IMPLANTATION OUTSIDE THE SEMICONDUCTOR FIELD	708-755
6.1. Ion implantation in superconductors	708
6.2. Hyperfine interactions	710
6.3. Ion implanted phosphors	713

6.4. Chemical effects of ion implantation	716
6.4.1. <i>Ion surface chemistry</i>	717
6.5. Implantation of magnetic materials	720
6.6. Refractive index modification	724
6.7. Corrosion studies in ion-implanted metals	729
6.8. Low-friction and wear resistant metal surfaces	738
6.9. The use of ion implantation in the study of mechanical properties and void formation in irradiated metals	744
References	754
Appendix 2	756-765
Appendix 3	766-777
Appendix 4	778-780
AUTHOR INDEX	781-794
SUBJECT INDEX	795-802
