| <b>PREFACE</b>  | iii |
| <b>Chapter 1. HOLOGRAMS AS WAVE PATTERNS</b>  | 1   |
| Properties of waves—Wave uniformity—Interference—Making a hologram—A photographic grating—A photographic zone plate—The complete hologram process—The hologram of a scene   |     |
| <b>Chapter 2. COHERENCE</b>   | 16  |
| Frequency coherence—Frequency stability—Spatial coherence—Coherent waves from small sources—A microwave hologram—A real acoustic image—The extremely short wavelengths of light   |     |
| <b>Chapter 3. LASERS</b>  | 26  |
| The first laser—A water wave analogy—The two-step process—Energy conservation with reflectors—Reflectors and spatial coherence—Energy concentration—Q-spoiling—Gas lasers—Reflectors and resonators—The natural line width—Coherence length—Semiconductor lasers  |     |
| <b>Chapter 4. WAVE DIFFRACTION</b>  | 43  |
| Diffraction by a slit—The near field—Diffraction by two slits—Diffraction by multiple slits—Multiple slit gratings and photographic gratings—Refraction by prisms—A prism grating—A double-prism grating—Volume effects—Dependence of diffraction on wavelength—Diffraction by a knife edge—Diffraction by a disk—Disks and zone plates |     |
| <b>Chapter 5. ZONE PLATES</b>   | 59  |
| The classical zone plate—Zone plates as negative lenses—Zone plates with areas interchanged—Offset zone plates—Offset holograms—Zone plates as lenses—Volume zone plates—Standing wave patterns—Lattice reflectors—Reflection zone plates   |     |

|   |    |
|---|----|
| <i>Chapter 6. PROPERTIES OF HOLOGRAMS</i>   | 74 |
| Three-dimensional realism—Holograms and photographs—Parallax and lens action—A stereo hologram—Focused-image holography—Reconstruction with a small portion of a hologram—Pseudoscopy in the real image of a hologram—Image inversion—Single wavelength nature of holograms—Requirements of film properties—Information content—Holograms and coherent radar—Acoustic holograms |    |
